The Ontario Government needs to REDUCE hydro -especially for rural communities who's agricultural land has been raped for green energy power feedi g back to the cities and sold back to rural communities for outrageous fees- we in these rural communities are paying through the nose for service that is sketchy as best. Further price increases to this already out of control machine will result in several people having to choose between home and homelessness... which in the long term means more social assistance. STOP this vicious circle. Hydro in Ontario is a commodity that should be marketed appropriately, residents should be paying LESS than consumers from other provinces/countries...its simple retail logic. Apply it!

If this is approved and rates arent lowered substancially I can guarantee the liberals wont have a chance in hell of even coming close to getting re-elected.
