I would like the board to reconsider the rate increase schedule. My family watches our electrical consumption and maximize our off peak use to save on our monthly bill. Next to my mortgage, our electrical bill is the highest bill we pay and as a family, it is hard to pay it. I just can't imagine how rates keep going up. Can we look at current processes and see if there are existing sources of power that are not being maximized? I thought wind turbines were going to lower our monthly bills?
