

Exhibit 8:

RATE DESIGN

OVERVIEW

This Exhibit documents the calculation of ETPL's proposed distribution rates by rate class for the 2018 Test Year, based on the rate design proposed in this Exhibit.

ETPL has determined its total 2018 Service Revenue Requirement to be \$10,785,163. The total Revenue Offsets of \$494,448 result in a Distribution Revenue Requirement of \$10,290,716 which is used to determine the proposed distribution rates. The Base Revenue Requirement is derived from ETPL's 2018 capital and operating forecasts, weather normalized usage, forecasted customer counts and regulated return on rate base. ETPL has updated the historical 2004 weather normalized load data as part of this application. ETPL engaged Elenchus to come up with a methodology to provide more current weather normalized data to be utilized by the model. A copy of the report prepared by Elenchus is included in Exhibit 3, Attachment 1. The Revenue Requirement is summarized in Table 8-1 below.

FIXED/VARIABLE PROPORTION

CURRENT

ETPL calculated the current fixed/variable proportions by applying the existing approved distribution rates to the 2018 Test Year load forecast. ETPL notes the volumetric rates used to calculate these figures exclude any rate riders and the adjustment for Low Voltage. Table 8-3: Current Fixed/Variable Proportions below outlines ETPL's current split between fixed and variable distribution revenue.

PROPOSED FIXED RATES

Consistent with recent Board decisions, ETPL proposes to maintain the fixed/variable proportions assumed in the current rates in order to design the proposed monthly service charge for all rate classes, with the exception of the Residential, GS > 1,000 to 4,999 kW and Large Use rate classes (as further described below).

RESIDENTIAL

On April 2, 2015, the Board issued its Policy on “A New Distribution Rate Design for Residential Electricity Customers (EB-2012-0140)”. Under the new policy, electricity distributors will structure residential rates so that all costs for distribution service are collected through a fixed monthly charge.

SUMMARY OF PROPOSED FIXED RATES

Table 8-5 below summarizes the proposed Monthly Service Charges by rate class. As indicated above the proposed fixed charges utilize the same fixed variable split percentages which underpin the current rate structure with the exception of the residential class (explained above) and both the Large Use and GS> 1,000 to 4,999 kW class with maintain the current fixed charges since they both fall outside the max ceiling charge as calculated by the Cost Allocation model filed as part of this application.

3 **PROPOSED VARIABLE RATES**

4 The variable distribution charge is calculated by dividing the variable distribution portion of the
 5 Base Revenue Requirement by the appropriate 2018 Test Year billing determinants.

6 Table 8-6 provides ETPL's calculations of its proposed variable distribution charges for the 2018
 7 Test Year, as based off above proposed fixed charges, and inclusive of adjustments for the
 8 recovery of transformer ownership allowance. For more information on ETPL's transformer
 9 ownership allowance rate, please see Section 8.7 below.

RATE DESIGN POLICY CONSULTATION

On April 3, 2014, the Board released its *"Draft Report on Rate Design for Electricity Distributors"* (EB- 2012-0410) which proposed implementing a fixed monthly distribution charge.

On April 2, 2015, the Board released its policy *"A New Distribution Rate Design for Residential Electricity Customers"* (the "Policy"), by which the Board decided that the distribution costs will be recovered from residential customers of a distributor through a fixed monthly service charge. The Board determined the new rate design will be implemented across all distributors' service areas over a four year period to manage any customer bill impact. ETPL will have one year remaining on the transition upon approval of the proposed 2018 fixed charge for the residential class.

As required, ETPL has calculated the combined effect of the proposed rate design and other impacts from rebasing on a Residential customer at the 10th percentile of consumption. The 10th percentile of Residential consumption was determined by sorting the average monthly Residential consumption in

2016 for all ETPL residential customers from lowest to highest, and then selecting the average monthly consumption customers at the 10th percentile. For ETPL, the average monthly consumption for the 10th percentile residential customer is 233 kWh. The bill impacts for Residential customers at the 10th percentile are provided in the following table. Please see Attachments 8G for the detailed bill impact calculations. The analysis shows that the proposed rate design and other impacts from rebasing will result in bill impacts for the Residential customer at the 10th percentile of consumption of less than 10%.

SMART METERING ENTITY CHARGE

2

3

4

5

On March 28, 2013, the Board issued a Decision and Order (EB-2012-0100/EB-2012-0211) establishing a Smart Metering Entity charge of \$0.79 per month for Residential and General Service < 50 kW customers effective May 1, 2013. The Smart Metering Entity Charge is currently in effect until October 31, 2018 and is subject to change as directed by the Board.

6

7

Accordingly, ETPL proposes to continue to utilize the previously approved \$0.79/month/customer rate unless otherwise directed by the Board.

LOW VOLTAGE SERVICES RATES

Erie Thames is embedded within Hydro One Network Inc. ("HONI") service territory and as such is billed Low Voltage charges on 20 separate points based upon HONI's approved sub-transmission rates. In order to remain whole ETPL in turn charges all of its customers to recover these LV charges. The following section updated these charges to allow ETPL to more accurately recover from its customers what it is charged annually by HONI thereby minimizing future DVAD balances with respect to these charges.

8.3.1 Historic Low Voltage Charges

ETPL charges LV Service rate riders to all of its customer classes and records LV charges payable to HONI in Account 4750 – Charges Low Voltage. LV revenue billed to ETPL's customers is recorded in Account 4705 – Billed Low Voltage. Each month, ETPL reconciles the variance between these two accounts and records the difference in Account 1550. For more details on Account 1550 balance and disposition, please see Exhibit 9. Table 8-9 below presents the LV charges booked to Account 4750 and billed amounts booked to Account 4705 for 2012 to 2016 historic years.

8.3.2 Forecasted Low Voltage Charges

ETPL proposes using the 2016 actual HONI LV charges as the basis for the proposed 2018 rates. Table 8-10 below shows the calculation of the estimated 2017 LV charges. This estimate is

1 based on the application of 2016 billing determinants charged by HONI, as applied against to
2 the approved HONI 2017 LV rates (EB-2013-0146).

3 **TABLE 8-10: 2016 PROPOSED LV CHARGES**

Low Voltage	164,293.00	\$ 1.60	\$ 262,310.20
Total			\$ 1,378,215.81

4
5 ETPL notes the proposed LV charges will provide better alignment with the actual payments ETPL
6 makes to HONI, and will thereby assist in reducing the magnitude of future associated deferral
7 dispositions.

8 **8.3.3 Proposed Low Voltage Rates**

9 ETPL calculated the LV amount to be collected from each customer class by using the proposed
10 Retail Transmission Service Rates ("RTSR") – Connection revenue by rate class. To calculate the
11 total annual RTSR – Connection revenue by rate class, ETPL used the proposed RTSR –
12 Connection rates from Section 8.4.2 and multiplied each rate by the 2018 forecasted sales. The
13 resulting allocation percentages were applied to the forecasted LV amount of \$1,378,216
14 resulting in the LV charges by rate class. The results of these calculations are presented in Table
15 8-11 below.

RETAIL TRANSMISSION SERVICE RATES

In preparing ETPL's RTSR submission, ETPL has followed the Board's *Guideline G-2008-0001: Electricity Distribution Retail Transmission Service Rates*, Revision 1.0 dated July 22, 2009. ETPL has utilized the most recent version of the Board's RTSR Model for the development of the proposed rates. A copy of the Model is included in Attachment 8B of this Exhibit and has been filed in Live Excel format as part of this Application.

8.4.2 2018 Proposed Rates

As described in Exhibit 1, portions of the ETPL distribution system are directly connected to the IESO controlled grid, while other portions of the system are embedded to HONI. Accordingly, some of ETPL's load is subject to the monthly Uniform Transmission Rates ("UTRs") billed by the IESO, and some of ETPL's load is subject to RTSRs billed by HONI. Table 8-14 below shows the total amounts that ETPL was charged for transmission network and connection in 2016.

4 ETPL notes that the 2018 forecast charges in Table 8-16 are identical to the current wholesale
 5 charges in Table 8-15. This is due to the fact that the RTSR Model uses the current 2017 rates
 6 as an initial estimate for the 2018 rates. ETPL acknowledges that the 2018 UTR and HONI
 7 transmission rates may be updated at a later date to reflect actual 2018 rates, as approved by
 8 the Board.

9 Next, the RTSR Model allocates the forecasted 2018 charges from Table 8-16 above to the rate
 10 classes on the basis of ETPL's existing RTSR rates and the 2016 RRR billing determinants. The
 11 amount allocated to each rate class is divided by the appropriate billing determinant to arrive at
 12 the proposed RTSR rate.

13 ETPL's 2018 proposed transmission network and connection rates are presented in Table 8-17.

REGULATORY CHARGES

The Wholesale Market Service Rate ("WMS") is designed to allow distributors to recover costs charged by the IESO for the operation of the IESO administered markets and the operation of the IESO controlled grid. The WMS Rate is an energy based rate (per kWh) and is set by the Board on a generic basis.

On December 15th 2016, the Board issued a Decision with Reasons and Rate Order (EB-2016-0362) establishing that the WMS rate used by rate regulated distributors to bill their customers shall be \$0.0032 per kWh and an additional component is billed to Class B customers for the CBDR of \$0.0004 per kWh effective May 1, 2013. Accordingly, ETPL proposes to continue to utilize the previously approved \$0.0032/kWh rate for WMS and \$0.0004/kWh for CBDR unless otherwise directed by the Board.

8.5.2 Rural or Remote Electricity Rate Protection Charge

On June 22, 2017, the Board issued a Decision and Rate Order (EB-2017-0234) which approved the rate for RRRP to be \$0.0003 per kWh effective July 1, 2017.

Accordingly, ETPL proposes to continue to utilize the previously approved \$0.0003/kWh rate unless otherwise directed by the Board.

8.5.3 Standard Supply Service – Administrative Charge

ETPL proposes to continue to utilize the previously approved \$0.25/customer rate, unless otherwise directed by the Board.

8.5.4 Ontario Energy Support Program (“OESP”)

On April 25th 2017 the Board announced updated to OESP credits effective May 1st, 2017 with its Order for OESP Credits EB-2016-0376. Therefore ETPL is including in its proposed tariff sheet the follow OESP credit schedule:

MICROFIT

2 Currently, ETPL has a MicroFIT monthly service charge of \$5.40, as most recently approved by
3 the Board on September 20, 2012.

4 ETPL understands that the Board will issue a generic MicroFIT charge based on information
5 compiled from Tab O3.6 MicroFIT Charge Worksheet in the cost allocation models filed by
6 distributors. ETPL proposes to continue the \$5.40 MicroFIT fixed charge until updated by the
7 Board.

TRANSFORMER OWNERSHIP ALLOWANCE

Currently, ETPL provides a transformer ownership allowance to those customers who own their own transformation facilities. The transformer ownership allowance is intended to reflect the costs to a distributor of providing “step down” transformation facilities to the customer’s utilization voltage level. Since the distributor provides electricity at utilization voltage, the cost of transformation is reflected in distribution rates. Therefore, when a customer provides its own transformation it is appropriate that the customer receive a credit for transformation costs already included in rates.

ETPL proposes to continue the currently approved transformer ownership allowance credit of (\$0.60) per kW of demand billed.

The Billed Demand reflected in Table 8-19 below reflects the 2018 Test Year forecasted kW multiplied percentage of 2016 TOA by rate class. ETPL does not forecast any significant changes from 2016 Actuals to the 2018 forecasted kW for customer owned transformers. ETPL notes that these values agree to the amounts that have been included in the revenue forecast and proposed distribution revenues in Section 8.1 above.

1 **8.8.2 Details of Proposed Changes**

2 ETPL requests no changes to its existing specific service charges, which are consistent with the
3 Board's standard rates. Therefore ETPL request that the specific service charges detailed in
4 Table 8-20 above represent the proposed specific service charges for this Application.

5

RETAIL SERVICE CHARGES

ETPL requests no changes to its existing Retail Service Charges, which are consistent with the Board's standard rates. Table 8-21 below presents the proposed Retail Service Charges for this Application.

LOSS ADJUSTMENT FACTORS

8.10.1 Overview

The current approved loss factors are presented in Table 8-22 below.

TABLE 8-22: CURRENT LOSS FACTORS

LOSS FACTORS

If the distributor is not capable of prorating changed loss factors jointly with distribution rates, the revised loss factors will be implemented upon the first subsequent billing for each billing cycle.

Total Loss Factor - Secondary Metered Customer < 5,000 kW	1.0451
Total Loss Factor - Secondary Metered Customer > 5,000 kW	1.0161
Total Loss Factor - Primary Metered Customer < 5,000 kW	1.0347
Total Loss Factor - Primary Metered Customer > 5,000 kW	1.0060

As previously described, ETPL is a partially embedded distributor within HONI's distribution system. As an embedded distributor and market participant, ETPL's electricity commodity charges are billed by the IESO and HONI.

ETPL has not been required by previous Board decisions to present details of loss studies.

8.10.2 Calculation of Losses

Distribution Loss Factors ("DLFs") represent the average electrical energy losses incurred when electricity is transmitted over a distribution network.

ETPL has calculated the total loss factor to be applied to customer's consumption based on the average wholesale and retail kWh for the years 2012 to 2016. The calculations are summarized in Table 8-23 below which is also consistent with calculation provided in Appendix 2-R including in Attachment 8C.

 3 The supply facilities loss factor ("SFLF") shown in the above table represents the losses on the
 4 supply to ETPL. The SFLF is calculated on the measured quantities between the transformer
 5 stations and the wholesale meter points. ETPL has 7 meter points directly connected to the
 6 IESO transmission grid and 20 metering points that are connected to HONI's distribution
 7 system. Since ETPL is partially embedded, the SFLF has been calculated as the weighted
 8 average of 1.0340 of the kWh measured at the metering points connected to HONI's
 9 distribution system and 1.0045 of the kWh measured at the metering points that are connected
 10 directly to the transmission grid. The details of the calculation of the SFLF is provided in Table
 11 8-24 below.

4 ETPL is proposing a loss factors lower than 5%. Pursuant to the Filing Requirements, as the
5 Distribution Loss Adjustment factor is less than 5%, no further explanation or details of actions
6 taken to reduce losses are necessary.

1

CONDITIONS OF SERVICE RATES

- 2 ETPL does not have any rates and charges in its Conditions of Service that do not appear on its
- 3 Tariff sheet.

1

TARIFF OF RATES AND CHARGES

2 The Current Tariff of Rate and Charges is reflective of the current Board Approved IRM Rate
3 Order on March 30th, 2017 in EB-2016-0068 and is included in Attachment 8E of this Exhibit.

4 ETPL has prepared the proposed 2018 Tariff of Rate and Charges consistent with the current
5 definition of rate classes. ETPL has included its 2018 proposed Tariff sheet in Attachment 8F of
6 this Exhibit.

BILL IMPACTS

ETPL has utilized the Board supplied bill impact model supplied on July 19th, 2017 to calculate the impacts by rate class as a result of its application. The following table summarizes the results of those impacts:

ETPL has filed its associated Bill Impact Model as part of the Live Excel Model as part of this Application and included a copy of the detailed bill impacts by rate class in Attachment 7 of this Exhibit.

The bill impacts summarized above and in the bill impact model include impacts related to distribution rate increases, elimination of Smart Meter rate riders and Tax Sharing rate riders and deferral and variance account disposition rate riders as discussed in Exhibit 9.

The detailed bill impacts by rate class in Attachment 7 show the impact on discrete customers groups. The starting point for this analysis includes the current rate classes for each of ETPL's rate zones (the names of these current rate classes are shown in Table 8-26 above). Each existing rate class is then compared to the corresponding proposed rate classes, which are analyzed at the typical kWh and kW assumptions detailed below in accordance with Board requirements:

- Residential (kWh): 233, 750, 500, 800, 1000,

- 1 • GS<50 kW (kWh): 1000, 2000, 5000,
- 2 • GS>50 to 999 kW (kW): 100, 500,
- 3 • GS>1,000 to 4,999 kW (kW): 1,250, 2,500, 3,500
- 4 • Large User (kW): 12,350
- 5 • Street Lighting (kW): 150
- 6 • Sentinel Lighting (kW): 1
- 7 • USL (kWh): 150
- 8 • Embedded Distributor (kW): 660

9 Based on this analysis, ETPL notes that the majority of the proposed bill impacts at a discrete
10 customer group level are decreasing (i.e. more favourable to customers), and that no discrete
11 customer group exceeds the 10% threshold. Accordingly, ETPL submits that the bill impacts of
12 its proposed 2018 distribution rates are reasonable and do not require rate mitigation.

RATE MITIGATION

2

At this time, ETPL submits that the bill impacts of its proposed 2018 distribution rates are

3

reasonable and do not require any additional rate mitigation.

Notes:

- ¹ The final residential class specific revenue requirement, excluding allocated Miscellaneous Revenues, as shown on Sheet 11. Cost Allocation, should be used (i.e. the revenue requirement after any proposed adjustments to R/C ratios).
- ² The distributor should enter the number of years remaining before the transition to fully fixed rates is completed. A distributor transitioning to fully fixed rates over a four year period and began the transition in 2016 would input the number "3" into cell D40. A distributor transitioning over a five-year period would input the number "4". Where the change in the residential rate design will result in the fixed charge increasing by more than \$4/year, a distributor may propose an additional transition year.
- ³ Change in fixed rate due to rate design policy should be less than \$4. The difference between the proposed class revenue requirement and the revenue at calculated base rates should be minimal (i.e. should be reasonably considered as a rounding error)

In the green shaded cells, enter billing detail for wholesale transmission for the same reporting period as the billing determinants on Sheet "4. RRR Data". For Hydro One Sub-transmission Rates, if you are charged a *combined* Line and Transformer connection rate, please ensure that both the line connection and transformer connection columns are completed.

Notes:

A(1) If directly connected to the IESO-controlled grid, kWh pertains to the virtual meter on the primary or high voltage side of the transformer at the interface with the transmission grid. This corresponds to the "With Losses" kWh value provided by the IESO's MV-WEB. It is the higher of the two values provided by MV-WEB.

If fully embedded within a host distributor, kWh pertains to the virtual meter on the primary or high voltage side of the transformer, at the interface between the host distributor and the transmission grid. For example, if the host distributor is Hydro One Networks Inc., kWh from the Hydro One Networks' invoice corresponding to "Total kWh w Losses" should be reported. This corresponds to the higher of the two kWh values provided in Hydro One Networks' invoice.

If partially embedded, kWh pertains to the sum of the above.

A(2) If directly connected to the IESO-controlled grid, kWh pertains to a metering installation on the secondary or low voltage side of the transformer at the interface with the transmission grid. This corresponds to the "Without Losses" kWh value provided by the IESO's MV-WEB. It is the lower of the two kWh values provided by MV-WEB.

If fully embedded with the host distributor, kWh pertains to a metering installation on the secondary or low voltage side of the transformer at the interface between the embedded distributor and the host distributor. For example, if the host distributor is Hydro One Networks Inc., kWh from the Hydro One Networks' invoice corresponding to "Total kWh" should be reported. This corresponds to the lower of the two kWh values provided in Hydro One Networks' invoice.

If partially embedded, kWh pertains to the sum of the above.

Additionally, kWh pertaining to distributed generation directly connected to the distributor's own distribution network should be included in **A(2)**.

B If a Large Use Customer is metered on the secondary or low voltage side of the transformer, the default loss is 1% (i.e., **B** = 1.01 X **E**).

D kWh corresponding to D should equal metered or estimated kWh at the customer's delivery point.

G and I These loss factors pertain to secondary-metered customers with demand less than 5,000 kW.

H If directly connected to the IESO-controlled grid, SFLF = 1.0045.

If fully embedded within a host distributor, SFLF = loss factor re losses in transformer at grid interface X loss factor re losses in host distributor's system. If the host distributor is Hydro One Networks Inc., SFLF = 1.0060 X 1.0278 = 1.0340. If partially embedded, SFLF should be calculated as the weighted average of above.

Distributors that wish to propose a different SFLF should provide appropriate justification for any such proposal including supporting calculations and any other relevant material.

8-D Rate Design and Revenue Reconciliation

Revenue Requirement Workform (RRWF) for 2018 Filers

Rate Design and Revenue Reconciliation

This sheet replaces Appendix 2-V, and provides a simplified model for calculating the standard monthly and volumetric rates based on the allocated class revenues and fixed/variable split resulting from the cost allocation study and rate design and as proposed by the applicant. However, the RRWF does not replace the rate generator model that an applicant distributor may use in support of its application. The RRWF provides a demonstrative check on the derivation of the revenue requirement and on the proposed base distribution rates to recover the revenue requirement, based on summary information from a more detailed rate generator model and other models that applicants use for cost allocation, load forecasting, taxes/PILs, etc.

Notes:

¹ Transformer Ownership Allowance is entered as a positive amount, and only for those classes to which it applies.

² The Fixed/Variable split, for each customer class, drives the "rate generator" portion of this sheet of the RRWF. Only the "fixed" fraction is entered, as the sum of the "fixed" and "variable" portions must sum to 100%. For a distributor that may set the Monthly Service Charge, the "fixed" ratio is calculated as: [MSC x (average number of customers or connections) x 12 months] / (Class Allocated Revenue Requirement).

8-G Bill Impact Model

(2018 Cost of Service Filers)

The bill comparisons below must be provided for typical customers and consumption levels. Bill impacts must be provided for residential customers consuming 750 kWh per month and general service customers consuming 2,000 kWh per month and having a monthly demand of less than 50 kW. Include bill comparisons for Non-RPP (retailer) as well. The OEB has established that, when assessing the combined effects of the shift to fixed rates and other bill impacts associated with changes in the cost of distribution service, a utility shall evaluate the total bill impact for a low volume residential customer consuming at the distributor's 10th consumption percentile19, to a minimum of 50 kWh per month. Refer to page 62 of Chapter 2 Filing Requirements For Electricity Distribution Rate Applications issued July 14, 2016.

For certain classes where one or more customers have unique consumption and demand patterns and which may be significantly impacted by the proposed rate changes, the distributor must show a typical comparison, and provide an explanation.

Note*

1. For those classes that are not eligible for the RPP price, the weighted average price including Class B GA through end of May 2016 of \$0.113/kWh (IESO's Monthly Market Report for May 2016, page 22) has been used to represent the cost of power. For those classes on a retailer contract, applicants should enter the contract price (plus GA) for a more accurate estimate. Changes to the cost of power can be made directly on the bill impact chart for the specific class.

2. Due to the change to energy consumption used in the calculation of GA rate riders for the 2017 rate year, the separate "GA Rate Riders" line is only applicable to the "Proposed" section of the bill impact tables.

3. Please enter the applicable billing determinant (e.g. number of connections or devices) to be applied to the monthly service charge for unmetered rate classes in column N. If the monthly service charge is applied on a per customer basis, enter the number "1". Distributors should provide the number of connections or devices reflective of a typical customer in each class.

Note that cells with the highlighted color shown to the left indicate quantities that are loss adjusted.
