**Interrogatory:**

- a) Please provide the detailed calculations used to derive the projected productivity savings identified in Table 17 above.
- b) Please describe how Hydro One will track these savings.
- c) What assurances do ratepayers have that Hydro One will achieve these forecast savings?

Witness: LOPEZ Chris

**Response:**

a) The updated evidence filed on December 21, 2017 includes an update to Hydro One's productivity savings forecast that has been embedded into the business plan. A more detailed view of the savings initiatives and the associated assumptions used are included in the table below.

Category in Rate Filing	Initiative Summary	Measurement and Expected Benefit	Updated Savings				
			2018	2019	2020	2021	2022
Capital	Move to Mobile	Move to Mobile (Field Force) Measures Labour Hours per Unit - Historical Baseline vs Actual Plan allocation to expected unit cost savings in New Connections, Joint Use line Relocations, Pole Replacement, Field Meter Service, Component Replacement	\$ 10.3	\$ 10.5	\$ 10.7	\$ 10.7	\$ 10.7
	Procurement	Procurement Lower Cost per Unit - Historical Baseline vs Actual Savings are estimated at a category level based on historical spend, expected and achieved negotiated savings, and updated per business plan assumptions (Capital program spend)	\$ 12.7	\$ 13.2	\$ 17.0	\$ 16.7	\$ 18.6
	Information Technology	ISD Savings Infrastructure Rationalization/Contract Reductions Expected capital allocation of negotiated reductions	\$ 0.3	\$ 0.3	\$ 0.3	\$ 0.3	\$ 0.3
	Operations	Stations Efficiencies Cost Reduction based on Historical spend Expected Capital allocation based on historical spend for OT reductions and Stations efficiencies	\$ 0.01	\$ 0.01	\$ 0.01	\$ 0.01	\$ 0.01
	Telematics	Telematics Fleet Rationalization - Unit Based Capital Plan Reduction Estimated by utilizing Telematics data on fleet utilization and then measures the expected unit based reduction in the capital plan	\$ 13.4	\$ 10.1	\$ 9.8	\$ 9.6	\$ 9.3
OM&A	Customer	eBilling Lower Cost per Customer Expected customers enrolled in eBilling x Unit Savings	\$ 1.8	\$ 2.6	\$ 3.2	\$ 4.1	\$ 4.8
	Information Technology	ISD Savings Infrastructure Rationalization/Contract Reductions Expected savings from server/database decommissioning and negotiated infrastructure and application maintenance contract reductions	\$ 7.4	\$ 8.3	\$ 11.5	\$ 11.5	\$ 11.5
		Contract Rates - Minor Enhancement (Old Rate - New Rate) * Expected ME Hours Negotiated savings x Expected need for minor enhancement hours in business plan	\$ 0.9	\$ 1.0	\$ 0.9	\$ 0.9	\$ 0.9
		Telecom Services Contracts Lower Cost per Contract Reflects negotiated reduction in contract price	\$ 0.6	\$ 0.7	\$ 0.7	\$ 0.7	\$ 0.7
	Move to Mobile	Move to Mobile (Clerical) FTE Reduction Reflects expected reduction in 29 back office support staff by 2020	\$ 2.7	\$ 2.8	\$ 2.9	\$ 2.9	\$ 2.9
	Operations	Cable Locate Outsourcing (Historical Cost - New Cost) * # of Units Reflects negotiated savings for planned units being outsourced	\$ 7.6	\$ 7.8	\$ 7.9	\$ 8.1	\$ 8.2
		Fault Indicator Deployment Lower Labour Hours per Unit Estimate based on expected time savings for responding to a line fault. Tracked using historical data compared to actual response time	\$ 0.8	\$ 0.8	\$ 0.8	\$ 0.8	\$ 0.8
		Forestry Initiatives Lower Cost per KM Estimated based on reductions in cost due to staff policy for inclement weather and expected overall unit volume reduction in trouble calls	\$ 2.8	\$ 4.1	\$ 5.9	\$ 6.9	\$ 7.9
		Stations Efficiencies Cost Reduction based on Historical spend Expected OM&A allocation based on historical spend for OT reductions and Stations efficiencies	\$ 0.3	\$ 0.4	\$ 0.4	\$ 0.4	\$ 0.4
		Engineering Work Team Migration FTE Reduction A reduction in support staff that was utilizing the legacy software	\$ 1.3	\$ 1.3	\$ 1.3	\$ 1.3	\$ 1.3
		Flexible Bill Window Lower Cost per Unit for Meter Reads Expected savings from a unit reduction in demand for manual meter reads and lower unit cost due to gained scheduling efficiencies	\$ 1.5	\$ 1.5	\$ 1.5	\$ 1.5	\$ 1.5
		Procurement	Procurement IT Software Cost Reduction Reflects expected and negotiated savings	\$ 0.9	\$ 1.7	\$ 2.6	\$ 2.6
	Telematics	Telematics Lower Liters of Fuel per KM Reflects results of pilot program with expected reduction in liters of fuel per KM driven	\$ 0.8	\$ 0.8	\$ 1.4	\$ 1.3	\$ 2.2
CCC	Administrative	Corporate Common Head Count Reductions FTE Reduction Identified headcount reductions by position in Corporate Common	\$ 1.7	\$ 1.9	\$ 1.9	\$ 1.9	\$ 1.9
	Procurement	Procurement Lower Cost Realized reduction in contracted spend in Corporate Common	\$ 2.3	\$ 2.3	\$ 2.3	\$ 2.3	\$ 2.3
<b>Total</b>			<b>\$ 36.4</b>	<b>\$ 34.2</b>	<b>\$ 37.8</b>	<b>\$ 37.3</b>	<b>\$ 39.0</b>
Capital			\$ 36.4	\$ 34.2	\$ 37.8	\$ 37.3	\$ 39.0
OM&A			\$ 29.4	\$ 33.7	\$ 40.9	\$ 42.9	\$ 45.5
Corporate Common			\$ 4.0	\$ 4.2	\$ 4.2	\$ 4.2	\$ 4.2

Witness: LOPEZ Chris

1 b) Hydro One’s productivity governance and associated reporting processes are maintained by  
2 Finance. Hydro One has implemented a robust governance structure around productivity  
3 reporting to ensure productivity savings are accurately reflected on corporate scorecards and  
4 that there is continuity of savings in the Business Plan.

5  
6 All productivity initiatives are approved by Finance prior to reporting any actual savings on  
7 corporate scorecards and are audited for compliance throughout the year. Approval by  
8 Finance ensures that each initiative is tracked using a detailed calculation methodology.

9  
10 Finance reviews all productivity reporting to ensure each initiative meets the following  
11 criteria:

- 12 • Consistently documented (detailed description/logic, identified  
13 systems/dependencies, clear calculation methodology/data source and reasonable  
14 exclusions/adjustments);
- 15 • Auditable with an applicable baseline for reporting;
- 16 • In line with Hydro One’s definition of productivity (‘hard’ savings and not cost  
17 avoidance); and
- 18 • Reviewed and approved by a VP or delegate.

19  
20 Productivity achievement is reported to the Executive Leadership Team on a monthly basis  
21 and is included as a metric on Hydro One’s Team Scorecard for management staff.

22  
23 c) Ratepayers are assured through Hydro One’s commitment to achieving the forecast savings  
24 targets. This commitment is demonstrated by:

- 25
- 26 i. The enhanced governance and visibility in Hydro One’s productivity reporting  
27 process;
- 28 ii. Incremental productivity savings being identified in the updated evidence filed on  
29 December 21<sup>st</sup>, 2017;
- 30 iii. Embedding the forecast savings into the business plan which puts the achievement  
31 risk on Hydro One’s Net Income and not on the ratepayer;
- 32 iv. Including the savings and associated net income targets on the Team scorecard for  
33 management staff; and
- 34 v. Ratepayers are protected through the Custom Incentive Rate mechanism which allows  
35 for increases in OM&A, limited to inflation less productivity. If Hydro One fails to  
36 achieve its productivity savings it will not impact customer rates.

# BUILDING CONNECTIONS

# PIKANGIKUM POWER LINE PROJECT

## High-Level Project Schedule

### Previous Milestones

- 25kV line and anchor installation is complete
- All required line equipment has been purchased

### May 2018

- Begin installing steel poles
- Substation construction has started
- Start framing wood pole structures in the air

### July 2018

- Line foundation complete

### September 2018

- Final site inspection and restoration

### October 2018

- Substation construction complete

### November 2018

- Line construction complete

### December 2018

- Line energization

## MAY UPDATE FROM POWERTEL

THE 25 kV PORTION OF THE LINE FROM THE SUBSTATION UP TO PIKANGIKUM IS complete and progress continues on the 115 kV portion of the line along Taxi Bay Road and the Nungesser Road. Clearing of the Right of Way is complete with the exception of some smaller, environmentally sensitive areas which will be cleared in the future. As we build the line, on-the-job training continues for all of our employees. Last month the training included Forest Fire Training, Traffic Control Training, ATV Rider Awareness, and Standard First Aid.

Construction continues by PowerTel and their Subcontractors on the line to Pikangikum.

For Project information, please visit our website:

# PIKANGIKUM POWER LINE PROJECT

## VISITING EENCHOKAY BIRCHSTICK SCHOOL

The Project Training Team and PowerTel visited EBS for a career fair with the students on April 24th.

THE PIKANGIKUM EENCHOKAY BIRCHSTICK SCHOOL (EBS) CAREER Fair was held April 24th and was an excellent event with attendance from over 400 youth ranging from grades 4 to 12. The Project Team was happy to be invited to present updates to the students, highlight safety and promote involvement in the project through the training initiative. PowerTel staff were also thrilled to be involved in the Career Fair and brought along electrical tools, parts and gear for students to explore and try on. A big Thank-You goes out to the staff and organizers for having us! The future of the Power Line Trades looks bright with such a great group of kids taking interest!

Please see some of the excellent power line art contest entries below, received from students in grades 7 & 8.

**FILE NO.:** EB-2017-0049 **Hydro One Networks Inc.**

---

**VOLUME:** Technical Conference

**DATE:** March 1, 2018

1 Canadian-specific levelization. It was only for the  
2 escalation method that we used the ECI.

3 DR. LOWRY: Speaking of those levelizations, did you  
4 use -- how did you levelize the REC data? How did you come  
5 up with input price levels for the REC data?

6 MR. FENRICK: Same procedures as with the investor-  
7 owned utilities, and Hydro One, where we looked at Bureau  
8 of Labour statistics, composites of what occupations are  
9 aggregated to make a transmission and distribution utility,  
10 you know, so the percentage of management positions,  
11 percent of what -- you know, a whole host of occupations.  
12 And we mapped that to the specific cities served by the  
13 utilities and then constructed it in the same manner.

14 DR. LOWRY: Now, speaking of the specific cities, did  
15 you do that for Hydro One as well? I know there are a lot  
16 of cities served. Or did you use just Ontario numbers?

17 MR. FENRICK: Just Ontario numbers. We basically said  
18 Hydro One serves all of Ontario and used Ontario numbers.

19 DR. LOWRY: Is it reasonable to assume that the wage  
20 rates paid by Hydro One are reasonably approximated by  
21 those for the province in view of the fact that it doesn't  
22 serve Windsor or the Toronto area or the Ottawa area?

23 MR. FENRICK: Yes, I think that is a reasonable  
24 assumption.

25 DR. LOWRY: Okay. Now, my next question, something  
26 caught my eye when I looked at that table, data set  
27 averages for most recent year. And I know that you  
28 included the RECs in the study to add more companies that

1 had low customer density and perhaps for a few other  
2 reasons, more rural in general. But it caught my eye that  
3 the value of the square kilometre per customer variable was  
4 0.765 for Hydro One and was 0.159 for the RECs. And, you  
5 know, if you're comparing Hydro One -- and now we're  
6 talking the new Hydro One that's acquired, you know, a lot  
7 more communities than they had in the past that aren't in  
8 such remote areas -- it just surprised me that Hydro One's  
9 value for that was so much higher than that of the RECs.

10 And so one question I have is, can you, you know,  
11 comment on the reasonableness of that; but secondly, it  
12 gets me to wondering about how square kilometres are  
13 calculated for Hydro One compared to how they're calculated  
14 for the RECs and for other companies in the U.S. part of  
15 the sample.

16 And it kind of gets back to the same area: Are you  
17 just counting a service territory defined as, you know,  
18 pretty close to where the wires are, or is it a broad  
19 region where in fact, you know, there are some pretty big  
20 chunks of territory where there are very few distribution  
21 wires?

22 MR. FENRICK: The first comment I'd make is, well,  
23 yes, Hydro One's value is .765 and the REC average value is  
24 .159. There is certainly diversity in that REC value.  
25 That's an average. There's rural electric cooperatives  
26 that are below that number and then also well above that  
27 number, and so --

28 DR. LOWRY: Could I just ask about that, Steve?

1 Because I didn't look real closely at that REC list. I  
2 mean, are there, you know, a lot of RECs from the rural  
3 east that are -- you know, where things are not quite as  
4 spread out that would pull that number down? I was  
5 thinking of the RECs as being more out in North Dakota or  
6 something.

7 MR. FENRICK: Right. There are -- there's 900-some  
8 RECs in the U.S., so there's a huge variance, if you will,  
9 of density from, as you mentioned, some on the east coast  
10 that have higher density values and then there are  
11 certainly ones that are much lower density. So it is a  
12 mixed bag.

13 I'm trying to think of -- there was an IR that asked  
14 about these conditions and how Hydro One compares. And  
15 there were rural electric cooperatives that were less dense  
16 than Hydro One when we examined that.

17 DR. LOWRY: So then can you address how Hydro One  
18 estimated its service territory?

19 MR. FENRICK: This gets to a prior answer, where it  
20 was the broad definition of the service territory of Hydro  
21 One. If you think about the fact they have to -- you know,  
22 maybe there are small little pockets of customers, but  
23 that's an enormous cost driver for Hydro One to be serving  
24 those pockets throughout its service territory. You know,  
25 it's got to have lines to run to those customers and  
26 provide service.

27 And so while you're right, there are probably some  
28 land areas in that that there are no customers, you know,

1 where there are pockets and there's a few customers here  
2 and a few customers there, that's an enormous cost driver  
3 to Hydro One and is rightly put into the econometric model  
4 that way.

5 DR. LOWRY: So the square miles that was put in  
6 for -- in calculating this variable for Hydro One, did that  
7 come off of the GPS work? Or was this an independent  
8 calculation?

9 MR. FENRICK: Just to clarify, GIS -- it was the GIS  
10 work that we used to -- and it was the same Platt's data  
11 that we used for Hydro One as well as the rest of the  
12 sample. So there wasn't a Hydro One estimate. It was the  
13 -- using the GIS mapping to be consistent from Hydro One  
14 and the rest of the U.S. sample.

15 DR. LOWRY: Okay.

16 MR. NETTLETON: Mark, it's Gord Nettleton. Just one  
17 clarification that I would point out that was a premise to  
18 the -- I think a premise to your question related to the  
19 acquisitions, that Hydro One acquired utilities that Hydro One  
20 has obtained. I'm just wanting to make sure that we're all  
21 on the same page, that the acquisitions are not being  
22 integrated into Hydro One from a rate-making perspective  
23 until midway through this rate period and certainly would  
24 not have been reflected in the 2015 data that we're  
25 speaking of here.

26 MR. SHEPHERD: Can I just interject there, Mark,  
27 before you respond. There are, of course, 88 acquisitions  
28 prior to that, right? And those are integrated.

1 MR. NETTLETON: Yes.

2 MR. SHEPHERD: And they're all small towns, exactly  
3 what Mr. Lowry was talking about. That's -- I just wanted  
4 to clarify that. Thanks, Mark.

5 DR. LOWRY: Okay. Sorry, I'm looking through here  
6 just trying to see what the best use of the next 15 minutes  
7 is.

8 OEB Staff Interrogatory No. 41 next, issue 10. Let me  
9 know when you're ready.

10 MR. FENRICK: I think we're ready, Mark.

11 DR. LOWRY: Okay. So the comment here was, your  
12 answer to part E, is you state "the pension and benefit  
13 expenses are not itemized on Form 7." And that prompts me  
14 to ask, well, is this then the reason that pension and  
15 benefits expenses are included in the benchmarking study?

16 MR. FENRICK: It's certainly one of the reasons. We  
17 couldn't exclude the pension and benefits from the rural  
18 electric cooperatives. We also, looking back at the  
19 Toronto Hydro custom incentive regulation proceeding,  
20 excluding pensions wasn't done by either us or PEG in the  
21 reply to our study. So using that as basis, we didn't  
22 exclude the pensions and benefits.

23 DR. LOWRY: But isn't it the case that Hydro One is  
24 proposing to Y factor pension expenses, so that the price  
25 cap -- the revenue cap index does not apply to pensions?

26 MR. NETTLETON: Mark, just for clarification, are you  
27 referring to the reg asset?

28 DR. LOWRY: That may be how it's termed, because I

19

- The challenge posed by low customer density is a major issue when benchmarking the cost of Hydro One. The customer density variable that PSE used is service territory area/customer.<sup>23</sup> Service territory area is difficult to calculate accurately. A threshold issue in these calculations is whether the territory is the area which the utility must *stand ready* to serve if demand arises or the (often much smaller) area it *actually* serves. The former approach is easier to implement but less accurate. In the technical conference, Mr. Fenrick stated that PSE took the former approach.<sup>24</sup> Hydro One's customer density is reported to be far lower than the average for the rural electric cooperatives in the sample. The service territory estimate for Hydro One exceeds the entire land area of Ontario. Alternative density variables are available. PEG used overhead line miles per customer as the density variable in a recent power distributor cost benchmarking study for Alberta's Utilities Consumer Advocate ("UCA").<sup>25</sup> The value of this variable will tend to be high for distributors serving rural areas and low for distributors serving urban areas.
- One cost *advantage* of a rural distributor is extensive overheading of facilities, which saves on capital cost. Our research indicates that distributors with extensive overheading tend to have lower capital cost and total cost. There is no overheading variable in PSE's model.
- The PSE benchmarking study is unusual for including data from numerous US regional electric cooperatives in the sample, yet it excludes data for Ontario distributors that serve rural areas (e.g., Algoma Power) and report their costs in Canadian currency. REC data do have some advantages in a study of the cost performance of Hydro One.
  - RECs typically have low customer density like Hydro One. Inclusion of REC data in the sample to that extent increases the precision of forecasts of the cost of Hydro One. REC data are particularly desirable for estimating the parameter of the cost model's density variable.
  - Data on peak loads of RECs may be better than those available for US IOUs.

The REC data also have noteworthy limitations. Three of these are especially important.

 EB-2017-0049  
 Exhibit A  
 Tab 3  
 Schedule 2  
 Page 6 of 12

1 The OM&A (line 9) provided for each year in Table 1 is determined based on the 2018  
 2 forecast provided in the Application and increased by the Inflation Factor ("I") and  
 3 reduced by the proposed Productivity Factor ("X"), for a total increase of 1.45% per  
 4 annum.

5  
 6 **Table 1: Summary of Revenue Requirement Components (\$ Million)**

Line		Reference	2018	2019	2020	2021	2022
1	Rate Base	D1-1-1	7,671.6	8,049.8	8,477.9	9,036.5	9,436.6
2	Return on Debt	E1-1-1	191.6	201.1	211.8	225.7	235.7
3	Return on Equity	E1-1-1	269.4	282.7	297.7	317.4	331.4
4	Depreciation	C1-6-2	392.6	413.5	428.6	448.1	463.0
5	Income Taxes	C1-7-2	61.5	64.7	66.4	72.7	72.7
6	Capital Related Revenue Requirement		915.1	962.0	1,004.5	1,063.9	1,102.8
7	Less Productivity Factor (0.45%)			(4.3)	(4.5)	(4.8)	(5.0)
8	<b>Total Capital Related Revenue Requirement</b>		<b>915.1</b>	<b>957.7</b>	<b>1,000.0</b>	<b>1,059.1</b>	<b>1,097.8</b>
9	OM&A	C1-1-1	584.8	593.3	601.9	610.6	630.4
10	Integration of Acquired Utilities	A-7-1				10.7	
11	<b>Total Revenue Requirement</b>		<b>1,499.9</b>	<b>1,551.0</b>	<b>1,601.9</b>	<b>1,680.4</b>	<b>1,728.2</b>
12	Increase in Capital Related Revenue Requirement			42.6	42.3	59.1	38.8
13	Increase in Capital Related Revenue Requirement as a percentage of Previous Year Total Revenue Requirement			2.84%	2.73%	3.69%	2.31%
14	Less Capital Related Revenue Requirement in I-X			0.88%	0.90%	0.91%	0.91%
15	<b>Capital Factor</b>			<b>1.96%</b>	<b>1.83%</b>	<b>2.78%</b>	<b>1.39%</b>

7  
 8  
 9 The 2018 Total Revenue Requirement of \$1,499.9 million (line 11) is determined based  
 10 on a forward test year, cost of service approach and is the rebasing year for this  
 11 Application.

12  
 13 In 2019, the Capital Related Revenue Requirement (line 6) increases to \$962.0 million  
 14 versus \$915.1 million in 2018. Hydro One will reduce the Capital Related Revenue  
 15 Requirement (line 6) by the proposed Productivity Factor of 0.45% or \$4.3 million (line  
 16 7), such that the Total Capital Related Revenue Requirement is \$957.7 million (line 8).  
 17 The change in Total Capital Related Revenue Requirement (line 8) in 2019 versus 2018  
 18 is \$42.6 million (line 12). This difference is equal to 2.84% of the 2018 Total Revenue  
 19 Requirement of \$1,499.9 million (\$42.6 million divided by \$1,499.9 million).

Witness: Oded Hubert

1 The 2.84% increase in Total Capital Related Revenue Requirement is the total increase in  
2 revenue requirement arising from the higher 2019 Capital Related Revenue Requirement  
3 (line 6). However, the 2.84% increase must be offset by the increase in revenue  
4 requirement that results from the application of the Inflation and Productivity Factors (I -  
5 X) of the RCI. This is done by determining the percentage of the Total Capital Related  
6 Revenue Requirement (line 8) that is already provided for by the Inflation and  
7 Productivity Factors. In 2019, this equals 0.88% (\$915.1 million x 1.45% / \$1,499.9  
8 million). The net result of 1.96% (2.84% less 0.88%) is the 2019 Custom Capital Factor.  
9 The calculation of the Custom Capital Factor for each of 2020 through 2022 is the same,  
10 as set out in Table 1 above.

11

12 **1.4 REVENUE CAP INDEX SUMMARY**

13

14 Table 2 below summarizes the Custom Revenue Cap Index by Component that Hydro  
15 One is proposing to use in this Application to determine Total Revenue Requirement for  
16 rate-making purposes for 2019 through 2022.

17

18 **Table 2: Custom Cap Index (RCI) by Component (%)**

Custom Revenue Cap Index by Component	2019	2020	2021	2022
Inflation Factor (I)	1.90	1.90	1.90	1.90
Productivity Factor (X)	-0.45	-0.45	-0.45	-0.45
Capital Factor (C)	1.96	1.83	2.78	1.39
Custom Revenue Cap Index Total	3.41	3.28	4.23	2.84

19

20

21 Table 3 below summarizes the Total Revenue Requirement that would result from the  
22 Board's approval of Hydro One's Custom IR, were the Application to be approved as  
23 filed.

 EB-2017-0049  
 Exhibit A  
 Tab 3  
 Schedule 2  
 Page 8 of 12

**Table 3: Revenue Requirement by Year**

Year	Formula	Revenue Requirement
2018	Cost of Service	\$1,499.9 million
2019	2018 Revenue Requirement x 1.0336	\$1,551.0 million
2020	2019 Revenue Requirement x 1.0328	\$1,601.9 million
2021*	2020 Revenue Requirement x 1.0423 + 10.7M	\$1,680.4 million
2022	2021 Revenue Requirement x 1.0284	\$1,728.2 million

\*Hydro One is proposing to update the 2021 Total Revenue Requirement with updated cost of capital parameters.

## 1.5 INTEGRATION OF ACQUIRED UTILITIES

Since its last rebasing application, Hydro One has acquired Norfolk, Haldimand and Woodstock. Consistent with the Board's Mergers, Acquisitions, Amalgamations, and Divestitures ("MAADs") Decisions and ratemaking policies, the Acquired Utilities are currently separate from Hydro One for rate-making purposes. As outlined in Exhibit A, Tab 7, Schedule 1, Hydro One proposes to integrate the Acquired Utilities effective January 1, 2021. As set out in Exhibit G1, Tab 2, Schedule 1, Hydro One will introduce six new rate classes at that time.

Consistent with the Board's MAADs policies, the financial information and the associated revenue requirement relating to the Acquired Utilities have been excluded from Hydro One's financial information for the test years prior to 2021. For the 2021 and 2022 test years, all financial information presented in this Application includes costs relating to both Hydro One and the Acquired Utilities.

This means that the gross fixed assets and accumulated depreciation of the rate base of the Acquired Utilities has been added to the opening balance of Hydro One's gross fixed assets and accumulated depreciation, respectively, effective January 1, 2021. The resulting increase in rate base of \$168.4 million (Exhibit D1, Tab 1, Schedule 1) and capital expenditures is reflected in lines 1 through 6 of Table 1 above and captured as part

Witness: Oded Hubert

1 Using Hydro One Distribution’s approved forecasting methodology, the forecast for the  
2 period 2018 – 2022 is presented below:  
3

4 **Table 3: Hydro One Distribution Load and Number of Customers**

<b>Year</b>	<b>GWh Delivery Forecast</b>	<b>Distribution Customer Count</b>
2018	36,019	1,300,516
2019	35,680	1,309,216
2020	35,673	1,317,967
2021*	36,363	1,386,522
2022*	36,373	1,395,578

\* The figures include the impact of integrating Acquired Utilities into Hydro One Distribution.

5

6

7 The figures in Table 3 and for 2017 reflect: (a) the impact of amendments to the Distribution  
8 System Code related to the elimination of load transfer arrangements between electricity  
9 distributors (EB-2015-0006), and (b) the impact of integrating load and customer numbers of  
10 Norfolk, Haldimand and Woodstock (the “Acquired Utilities”) into Hydro One Distribution.  
11 Relative to the latest forecast of 2017 figures, Hydro One forecasts a decrease of 0.6% in its  
12 load forecast and an increase of 0.7% in the customer count forecast for 2018. The small  
13 decrease in load is mainly due to the impact of conservation and demand management  
14 (“CDM”) and economic factors. Relative to currently approved 2017 figures, Hydro One  
15 forecasts a decrease of 5.5% in its load forecast and a decrease of 0.8% in the customer count  
16 for 2018. Section 4 provides a more detailed discussion comparing forecasts for 2018 to  
17 2022 with historic years 2015 to 2016 and bridge year 2017.

Witness: Bijan Alagheband

**Table 7: Revenue Requirement (\$ Millions)**

Components	2017 <sup>1</sup>	2018	Reference
OM&A	593.0	584.8	Exhibit C1, Tab 1, Schedule 1
Depreciation and Amortization	390.2	392.6	Exhibit C1, Tab 6, Schedule 1
Income Taxes	48.7	61.5	Exhibit C1, Tab 7, Schedule 1
Return on Capital	435.8	461.1	Exhibit D1, Tab 2, Schedule 1
<b>Total Revenue Requirement</b>	<b>1,467.6</b>	<b>1,499.9</b>	Exhibit E2, Tab 1, Schedule 1
Deduct External Revenues and Other	(52.7)	(53.6)	Exhibit E1, Tab 1, Schedule 2
<b>Rates Revenue Requirement</b>	<b>1,414.9</b>	<b>1,446.3</b>	
Regulatory Deferral and Variance Accounts Disposition	11.1	6.2	Exhibit F1, Tab 2, Schedule 1, Attachment 1
<b>Rates Revenue Requirement (with Deferral and Variance Accounts)</b>	<b>1,426.0</b>	<b>1,452.4</b>	

Exhibit Reference: E1-1-1

Note 1: The 2017 revenue requirement is from the OEB approved Hydro One Distribution's 2015 to 2017 rate application in EB-2013-0416

2

3 The increase in revenue requirement is largely attributable to the impact of rate base  
 4 growth, as reflected in the increase in depreciation, return on capital, income tax expenses  
 5 and lower external revenue forecast as described in Exhibit E1, Tab 1, Schedule 2. These  
 6 are partially offset by a lower cost of debt and lower OM&A costs.

7

8 **5.1.1 BUDGETING ASSUMPTIONS**

9

10 For 2018, Hydro One assumed 2.0% annual inflation and cost escalators for construction  
 11 and OM&A expense growth of 2.5% and 2.2%, respectively. These assumptions are  
 12 explained in further detail in Section 2.1.2 of the DSP. Hydro One adopted the US  
 13 GAAP accounting standard for regulatory purposes, based on the OEB's Decision with  
 14 Reasons in EB-2011-0268.

15

16 **5.1.2 LOAD FORECAST SUMMARY**

17

18 Table 8 sets out Hydro One's 2018-2022 distribution system load forecast, which  
 19 includes the impact of conservation and demand management and embedded generation.
