Attention: Ms. Kirsten Walli, Board Secretary Regarding: 2019 IRM application (EB-2018-0028)

Dear Ms. Walli,

Cooperative Hydro Embrun Inc. is pleased to submit to the Ontario Energy Board its 2019 IRM Application. This application is being filed pursuant to the Board's e-Filing Services.

Hard copies of the application will be sent to the OEB's offices via within a week.

We would be pleased to provide any further information or details that you may require relative to this application.

Yours truly,

Benoit Lamarche, General Manager Coopérative Hydro Embrun 821 Notre Dame Rue Russell, ON (613) 443-5110

### IN THE MATTER OF the Ontario Energy Board Act, 1998, S.O.

### 1998, c.15, (Schedule B); AND IN THE MATTER OF an

Application by Cooperative Hydro Embrun Inc. to the Ontario Energy Board for an Order or Orders approving or fixing just and reasonable distribution rates and other service charges to be effective January 1, 2019.

### **1 I INTRODUCTION**

Cooperative Hydro Embrun Inc. hereby applies to the Ontario Energy Board (the "Board")
for approval of its 2019 Distribution Rate Adjustments effective January 1, 2019.
Cooperative Hydro Embrun applies for an Order or Orders approving the proposed
distribution rates and other charges as set out in Appendix 2 of this Application as just
and reasonable rates and charges pursuant to Section 78 of the OEB Act.

Cooperative Hydro Embrun has followed Chapter 3 of the Board's Filing Requirements for
Transmission and Distribution Applications dated July 12, 2018 along with the Key
References listed at section 3.1.1 of the Chapter 3 Incentive Rate-Setting Applications

10 In the event that the Board is unable to provide a Decision and Order in this Application for implementation by the Applicant as of January 1, 2019, Cooperative Hydro Embrun 11 requests that the Board issue an Interim Rate Order declaring the current Distribution 12 13 Rates and Specific Service Charges as interim until the decided implementation date of 14 the approved 2019 distribution rates. If the effective date does not coincide with the Board's decided implementation date for 2019 distribution rates and charges, 15 Cooperative Hydro Embrun requests to be permitted to recover the incremental revenue 16 17 from the effective date to the implementation date.

18 Cooperative Hydro Embrun requests that this application be disposed of by way of a 19 written hearing. Cooperative Hydro Embrun confirms that the billing determinants used

### Page 5 of 26

in the model are from most recent reported RRR filings. The utility reviewed both the
existing "Tariff Sheets" and billing determinants in the pre-populated worksheets and
confirms that they were accurate.

4 In the preparation of this application, Cooperative Hydro Embrun used the 2019 IRM Rate Generator issued on July 12, 2018. The rate and other adjustments being applied for and 5 6 as calculated through the use of the above models include a Price Cap Incentive Rate-7 Setting ("Price Cap IR") option to adjust its 2019 rates. (The Price Cap IR methodology 8 provides for a mechanistic and formulaic adjustment to distribution rates and charges in 9 the period between Cost of Service applications). The model also adjusts Retail 10 Transmission Service Rates in accordance with Board Guideline G-2008-0001 -Electricity Distribution Retail Transmission Service Rates revised on June 28, 2012. 11

12 Cooperative Hydro Embrun also applies for the following matter;

13	•	Continuance of the Specific Services charges and Loss Factors.
14	•	Continuance of the MicroFit monthly charge.
15	•	Continuance of the Smart Meter Entity charge.
16	•	In compliance of the OEB's new rate design policy for residential customers,
17		Cooperative Hydro Embrun requests approval of a revised Minimum Fixed
18		Charge of \$32.02 up from previously Board Approved \$27.84 and Volumetric
19		Charge of \$0.0032 down from previously Board Approved \$0.064. Further
20		details on Bill Impacts are presented at Section 16 of this application.

- The annual adjustment mechanism is not being applied to the following components ofdelivery rates:
- Rate Adders, Rate Riders, Low Voltage Service Charges, Retail Transmission
   Service Rates, Wholesale Market Service Rate, Rural and Remote Rate
   Protection Benefit and Charge, Standard Supply Service Administrative
   Charge, MicroFIT Service Charge, Specific Service Charges, Transformation and
   Primary Metering Allowances, Smart Metering Entity Charge
- 8 CHEI recognizes that the utility, its shareholder and all its customer classes will be
- 9 affected by the outcome of the herein application.

## **1 2 DISTRIBUTOR'S PROFILE**

2 Cooperative Hydro Embrun is a Cooperative that is owned by the people who use its services

- 3 and carries on the business of distributing electricity within the Town of Embrun. Cooperative
- 4 Hydro Embrun's customers totals approximately 2260 and is comprised of over 91.05%
- 5 residential customers while 7.70% are General Service classes. The balance of the utility's
- 6 customer base is comprised of Street Lights and Unmetered Scattered Load
- 7 Cooperative Hydro Embrun relies on approximately 36 km of circuits and delivers energy and
- 8 power to approximately 2,260 customers. Cooperative Hydro Embrun's circuits include
- 9 approximately 18 km of overhead lines and 18 km of underground line, all carrying a voltage of
- 10 less than or equal to 4.8 kV circuits.

Cooperative Hydro Embrun's last Cost of Service application was for rates effective January 1,
2018.

## **1 4 PRICE CAP ADJUSTMENT**

- 2 As per Board policy (Chapter 3), distribution rates are to be adjusted according to the Price Cap
- 3 model presented through the Board's Rate Generator model. The calculation would be based
- 4 on the annual percentage change in the GDP-IPI index.
- 5 In accordance with the Report of the Board: Rate Setting Parameters and Benchmarking under
- 6 the Renewed Regulatory Framework for Ontario's Electricity Distributors, Cooperative Hydro
- 7 Embrun was assigned Stretch Factor Group I with a Price Escalator of 1.20, Price Cap Index of
- 8 1.20% and a Stretch Factor Value of 0.00%.
- 9 The following table shows Cooperative Hydro Embrun's applicable factor for its Price Cap
- 10 Adjustment.
- 11

# **Table 1 - Price Cap Parameters**

Stretch Factor Group	I
Set Price Escalator	1.20%
Revised Price Escalator	0.00%
Stretch Factor Value	0.00%
Productivity Factor	0.00%
Price Cap Index	1.20%

12 While the price factor adjustment under this application would apply to the fixed and volumetric

13 distribution rates for Cooperative Hydro Embrun, it would not affect the following:

14 • Rate adders and riders; Low voltage service charges; Retail Transmission Service

- 15 Rates; Wholesale Market Service Rate; Rural Rate Protection Charge; Standard Supply
- 16 Service Administrative Charge; MicroFIT Service Charge; Specific Service Charges.

## **1 5 REVENUE TO COST RATIO ADJUSTMENT**

- 2 In accordance with the Board Approved Settlement Agreement from its 2018 Cost of
- 3 Service, Cooperative Hydro Embrun is proposing to adjust its revenue to cost ratios for
- 4 the GS 50-4999kW and the Street Lighting calls and accordingly has updated the Revenue
- 5 to Cost Ratio model (2018). The resulting per class allocation is shown in the table below.
- 6 The supporting model has been filed along with this application.

## **1 6 RATE DESIGN FOR RESIDENTIAL CLASS**

In accordance with the Rate Design for Residential Electricity policy issued on April 2, 2015, Cooperative Hydro Embrun followed the approach set out in sheet 16 of the rate generator model to implement the second of four yearly adjustment to its Monthly Fixed Charge. Worksheet 16 of the model, which is reproduced below, shows and incremental fixed charge of \$3.80 which falls below the \$4.00 threshold. Table 3 show the existing rates compared to the proposed rates. The bill impacts are discussed further at Section 15 of this application.

## 1 7 RTSR ADJUSTMENT

- 2 Cooperative Hydro Embrun is applying for an adjustment of its Retail Transmission Service Rates
- 3 based on a comparison of historical transmission costs adjusted for new UTR levels and
- 4 revenues generated from existing RTSRs. This approach is expected to minimize variances in the
- 5 USoA Accounts 1584 and 1586.
- 6 Cooperative Hydro Embrun used the RTSR Adjustment Worksheets embedded in the IRM
- 7 Model, to determine the proposed adjustments to the current Retail Transmission Service Rates.
- 8 The Loss Factor applied to the metered kWh is the actual Board-approved 2018 Loss Factor.
- 9 The proposed adjustments of the Retail Transmission Service Rates are shown in the table below
- 10 and the detailed calculations can be found in the 2019 IRM Model filed in conjunction with this
- 11 application.

## **1 8 DEFERRAL AND VARIANCE ACCOUNT**

2 Cooperative Hydro Embrun has completed the Board Staff's 2019 IRM Rate Generator -3 Tab 3 Continuity Schedule and the threshold test shows a claim per kWh of \$0.0019. The Report of the Board on Electricity Distributors' Deferral and Variance Account Review 4 5 Report (the "EDDVAR Report") provides that during the IRM plan term, the distributor's 6 Group 1 audited account balances will be reviewed and disposed if the preset disposition 7 threshold of \$0.001 per kWh (debit or credit) is exceeded. Since the claim exceed this threshold test amount, Cooperative Hydro Embrun is therefore seeking disposal of its 8 9 deferral and variance account in this proceeding. The Cooperative Hydro Embrun Group 1 total claim balance is \$52,380 and is comprised of the following account balances. 10 Details of these balances can be found in the 2019 IRM Model. 11

## **1** 9 SPECIFIC SERVICE CHARGE

- 2 Cooperative Hydro Embrun is applying to continue the current Specific Service Charges, and
- 3 Loss Factors as approved by the Board (EB-2018-0026).

## 4 10 GLOBAL ADJUSTMENT

- 5 Cooperative Hydro Embrun 'settlement process has not changed since it completed the
- 6 OEB's Global Adjustment questionnaire.
- 7 CHEI does not have any Class A customers. For its Class B customers,
- 8 CHEI reviews the general service accounts not eligible on a bi-monthly 9 basis to determine which customers are eligible for the RPP. Any billing
- 10 adjustments are done as part of the next billing period.

### 11 Billing:

- 12Billing is performed once the readings of the smart readers are13complete and that all exception reports to these readings are resolved.14As such, CHEI uses actual amounts of consumption to bill the15customers. As for the rate, CHEI consistently uses the Global adjustment162nd estimate rate posted on the IESO website for the settlement month17(For all customer classes).
- 18

### **RPP / Non-RPP customers:**

19When completing RPP vs. market price claim submitted via the IESO20Portal, CHEI uses a bottom up approach. The utility pulls out the RPP21revenues for the month, divide that amount by the fixed OEB power22rate to determine the kWh. With the total amount of kWh's sold23obtained, CHEI then multiplies the amount with the estimated power24rate and that results in the amount of dollars claimed/paid from/to25IESO.

## Page **16** of **26**

1	The data used to determine the volume of RPP/non-RPP customers
2	comes from the Billing stats exported directly from the billing system.
3	This data is eventually compared to the Hydro One invoice (power bill)
4	which is received mid-month following the billing period (ie. Received
5	Jan 19, 2018 for the billing of December 2017). Once CHEI confirms
6	that the volume from the Billing stats corresponds to the power bill
7	received, the Non-RPP customers' cycles are identified in order to
8	calculate the Non-RPP volume. The RPP volume is then obtained by
9	difference.
10	CHEI trues-up on a monthly basis upon receipt of the power bills from
11	IESO and Hydro One. The difference between estimates and actuals,
12	whether a payment or a claim is settled in the following month.
13	Requests for dispositions:

If OEB refuses a portion or the full balance of the request, the portion refused is adjusted directly in the income statement in order to prevent requesting the balance a second time. <b>Accounting:</b>

to properly cut-off their year-end, CHEI records an unbilled revenue
only at year-end (December 31). This unbilled revenue is based on the
following format:

# Page **17** of **26**

1	<ul> <li>Actual client consumption for December * GA final rate of</li> </ul>
2	December
3	• This method of accounting ensures that the consumption of
4	January to December is properly reflected and accounted for
5	in the year ended December 31, 20XX.
6	<ul> <li>Amounts recorded in accounts 1588 and 1589 consists of the</li> </ul>
7	difference between what was billed (2nd Estimate rate $st$
8	Actual amount of consumption) and what it should actually
9	be (Actual rate * Actual amount of consumption). CHEI tracks
10	the variances in a spreadsheet on a monthly basis. However,
11	CHEI records the variance in account 1588 and 1589 only on
12	a quarterly basis (after having a second review of the
13	information performed by the external accountants (BDO
14	Canada LLP).
15	<ul> <li>The external accountant (BDO Canada LLP) makes</li> </ul>
16	subsequent adjustments, if any, when they are reviewing the
17	calculations performed by CHEI. The adjustments are made
18	only to reflect the calculation based on the point above.
19	
20	Internal Controls:
21	
22	In terms of Control and Oversight, CHEI follows a substantive approach
23	using reconciliation procedures to ensure accuracy and completeness
24	for the settlement submission process where possible. In addition, CHEI
25	does monthly bill testing for each class of customer, recalculates the
26	various charges based on approved rates and ensure all correct GL
27	accounts are used. CHEI also has routine month end balancing
28	processes to ensure sub ledger

# Page **18** of **26**

1	In order to ensure that the information used is correct, CHEI will also
2	perform the following controls (in addition to the ones noted in the
3	descriptions above).
4	• CHEI documents the actual consumption figures used in its
5	RPP settlement process in an Excel Spreadsheet which shows
6	the allocation between RPP and non-RPP customers.
7	<ul> <li>The Manager of CHEI is the only one who has access to the</li> </ul>
8	file.
9	<ul> <li>On a quarterly basis, the information is reviewed by an</li> </ul>
10	external firm (BDO Canada LLP) to ensure that the
11	information in the spreadsheet and corresponding
12	adjustments are valid.
13	With respect to Capacity Based Recovery (CBR), CHEI confirms that it
14	has followed accounting guidance on the disposition of CBR variances.
15	The Chapter 3 filing requirements state that if the distributor did not
16	have any Class A customers during the period where the Account 1580
17	CBR Class B sub-account balance accumulated, the rate generator
18	model will also transfer the subaccount balance to Account 1580 WMS
19	control account and include the CBR amounts as part of the general
20	purpose Group 1 DVA rate riders.
21	CHEI confirms that the balance of Class B sub-account balance
22	accumulated was transferred in 2017. The remaining balance of CBR
23	Class B consists of 2017's transactions. These will be transferred to the
24	1580 WMS account in the following year if the are accumulating.
25	The utility has completed and filed along with this application the GA
26	work form. 2014-2016 are consistent with the information filed in
27	CHEI's 2018 Cost of Service. There are no variances to explain.

## 1 11 DISPOSITION OF LRAMVA

In accordance with the Board's Guidelines for Electricity Distributor Conservation and
Demand Management (EB-2012-0003) issued on April 26, 2012, at a minimum,
distributors must apply for disposition of the balance in the LRAMVA at the time of their
Cost of Service rate applications if the balance is deemed significant by the applicant.

- 6 Cooperative Hydro Embrun has populated the LRAMVA work form and found the balance
- 7 not to be significant enough to include in its claim as the utility filed a 2018 Cost of Service
- 8 application. CHEI proposes to explore the possibility of disposing of its LRAMVA balances
- 9 in its next IRM application in 2020.

## **10 12 TAX CHANGE**

- 11 Cooperative Hydro Embrun's auditors (BDO) have completed worksheets 8 of the IRM
- model which resulted in a tax change of \$19 from the tax rates embedded in its OEB 2018
- 13 Board Approved base rate. Since the amount is marginal, CHEI proposes disregard the
- 14 amount and recalculate it during its 2020 IRM.

## 15 13 ICM/Z-FACTOR

- 16 Cooperative Hydro Embrun is not applying for recovery of Incremental Capital or Z-Factor
- 17 in this proceeding.

## **18 14 CURRENT TARIFF SHEET**

19 Cooperative Hydro Embrun current tariff sheets are provided in Appendix 1.

### Page 20 of 26

## **1 15 PROPOSED TARIFF SHEET**

- 2 The proposed tariff sheets generated by the 2019 IRM Rate Generator are provided in the
- 3 Appendix 2.

## 4 16 BILL IMPACT

- Table 5 below shows the bill impacts. The bill impacts are calculated based on the dollar
  change in Sub-Total C Delivery divided by total bill before tax and before OCEB at
  current rates. The 10% percentile was calculated in the following manner
- 8 1) The utility produced a report for its 2018 Cost of Service application which
- 9 included Residential Customer Number and their Monthly Consumptions.
- 10 2) The report was then sorted by lowest to highest consumption.
- 11 3) Less than 50kWh monthly consumption was removed from the file.
- 12 4) The utility then calculate the 10th percentile by taking 10% of the customer
- 13 count (or number of records in the report) , (e.g. 2120 customer = 212)
- 14 5) The utility then found the record in question. The customer's consumption of
  15 301 kWh/month became the "ceiling" for the lowest 10th percentile.
- 16 6) The file used to calculate the 10th percentile is attached for your review.
- 17 The total residential bill impact for the 10<sup>th</sup> percentile level of 301 kWh is 4.8%. The
- residential bill impact for the standard 750kWh is 1.5%. Detailed bill impacts for each rate
- 19 class are provided in the Appendix 3
- 20 With the exception of the GS<50 which uses the typical 2000 kWh/month, the other 21 classes were calculated using a rounded monthly average consumption.
- 22

Appendix 3 Bill Impacts

The bill comparisons below must be provided for typical customers and consumption levels. Bill impacts must be provided for residential customers consuming 750 kWh per month and general service customers consuming 2,000 kWh per month and having a monthly demand of less than 50 kW. Include bill comparisons for Non-RPP (retailer) as well. To assess the combined effects of the shift to fixed rates and other bill impacts associated with changes in the cost of distribution service, applicants are to include a total bill impact for a residential customers to residential customers, 10% of a distributor's residential customers consumption on a monthly basis). Refer to section 3.2.3 of the Chapter 3 Filing Requirements For Electricity Distributions.

For certain classes where one or more customers have unique consumption and demand patterns and which may be significantly impacted by the proposed rate changes, the distributor must show a typical comparison, and provide an explanation.

### Note:

1. For those classes that are not eligible for the RPP price, the weighted average price including Class B GA through end of May 2017 of \$0.1101/kWh (IESO's Monthly Market Report for May 2017, page 22) has been used to represent the cost of power. For those classes on a retailer contract, applicants should enter the contract price (plus GA) for a more accurate estimate. Changes to the cost of power can be made directly on the bill impact table for the specific class.

2. Please enter the applicable billing determinant (e.g. number of connections or devices) to be applied to the monthly service charge for unmetered rate classes in column N. If the monthly service charge is applied on a per customer basis, enter the number "1". Distributors should provide the number of connections or devices reflective of a typical customer in each class.

Note that cells with the highlighted color shown to the left indicate quantities that are loss adjusted.

## Notes:

- General Data inputs are required on Sheets 3. Data from Sheet 3 will automatically complete calculations on sheets 4 through 9 (Rate Base through Revenue Requirement). Sheets 4 through 9 do not require any inputs except for notes that the Applicant may wish to enter to support the results. Pale green cells are available on sheets 4 through 9 to enter both footnotes beside key cells and the related text for the notes at the bottom of each sheet.
  - <sup>(1)</sup> All inputs are in dollars (\$) except where inputs are individually identified as percentages (%)
  - (2) Data in column E is for Application as originally filed. For updated revenue requirement as a result of interrogatory responses, technical or settlement conferences, etc., use column M and Adjustments in column I
  - <sup>(3)</sup> Net of addbacks and deductions to arrive at taxable income.
  - <sup>(4)</sup> Average of Gross Fixed Assets at beginning and end of the Test Year
  - <sup>(5)</sup> Average of Accumulated Depreciation at the beginning and end of the Test Year. Enter as a negative amount.
  - (6) Select option from drop-down list by clicking on cell M10. This column allows for the application update reflecting the end of discovery or Argument-in-Chief. Also, the outcome of any Settlement Process can be reflected.
  - <sup>(7)</sup> Input total revenue offsets for deriving the base revenue requirement from the service revenue requirement
  - <sup>(8)</sup> 4.0% unless an Applicant has proposed or been approved for another amount.
  - <sup>(9)</sup> The default Working Capital Allowance factor is **7.5%** (of Cost of Power plus controllable expenses), per the letter issued by the Board on June 3, 2015. Alternatively, a WCA factor based on lead-lag study, with supporting rationale could be provided.

## Load Forecast Summary

This spreadsheet provides a summary of the customer and load forecast on which the test year revenue requirement is derived. The amounts serve as the denominators for deriving the rates to recover the test year revenue requirement for purposes of this RRWF.

The information to be input is inclusive of any adjustments to kWh and kW to reflect the impacts of CDM programs up to and including CDM programs planned to be executed in the test year. i.e., the load forecast adjustments determined in **Appendix 2-I** should be incorporated into the entries. The inputs should correspond with the summary of the Load Forecast for the Test Year in **Appendix 2-IB** and in Exhibit 3 of the application.

Appendix 2-IB is still required to be filled out, as it also provides a year-over-year variance analysis of demand growth andf trends from historical actuals to the Bridge and Test Year forecasts.

## **Cost Allocation and Rate Design**

This spreadsheet replaces Appendix 2-P and provides a summary of the results from the Cost Allocation spreadsheet, and is used in the determination of the class revenue requirement and, hence, ultimately, the determination of rates from customers in all classes to recover the revenue requirement.

Class Allocated Revenue Requirement, from Sheet O-1, Revenue to Cost || RR, row 40, from the Cost Allocation Study in this application. This excludes costs in deferral and variance (1) accounts. For Embedded Distributors, Account 4750 - Low Voltage (LV) Costs are also excluded.

Host Distributors - Provide information on any embedded distributor(s) as a separate class, if applicable. If embedded distributors are billed in a General Service class, include the (2) allocated costs and revenues of the embedded distributor(s) in the applicable class, and also complete Appendix 2-Q.

Customer Classes - If these differ from those in place in the previous cost allocation study, modify the customer classes to match the proposal in the current application as closely as (3) possible.

(4) In columns 7B to 7D, LF means Load Forecast of Annual Billing Quantities (i.e., customers or connections, as applicable X 12 months, and kWh, kW or kVA as applicable. Revenue quantities should be net of the Transformer Ownership Allowance for applicable customer classes. Exclude revenues from rate adders and rate riders.

(5) Columns 7C and 7D - Column Total should equal the Base Revenue Requirement for each.

Column 7C - The OEB-issued cost allocation model calculates "1+d" on worksheet O-1, cell C22. "d" is defined as Revenue Deficiency/Revenue at Current Rates. (6)

(7) Column 7E - If using the OEB-issued cost allocation model, enter Miscellaneous Revenues as it appears on worksheet O-1, row 19,

(8) Previously Approved Revenue-to-Cost (R/C) Ratios - For most applicants, the most recent year would be the third year (at the latest) of the Price Cap IR period. For example, if the applicant, rebased in 2012 with further adjustments to move within the range over two years, the Most Recent Year would be 2015. However, the ratios in 2015 would be equal to those after the adjustment in 2014.

(9) Status Quo Ratios - The OEB-issued cost allocation model provides the Status Quo Ratios on Worksheet O-1. The Status Quo means "Before Rebalancing".

(10) Ratios shown in red are outside of the allowed range. Applies to both Tables C and D.

## (D) Proposed Revenue-to-Cost Ratios (11)

.00% 90.00%	80 - 120

(11) The applicant should complete Table D if it is applying for approval of a revenue-to-cost ratio in 2017 that is outside of the OEB's policy range for any customer class. Table D will show that the distributor is likely to enter into the 2018 and 2019 Price Cap IR models, as necessary. For 2018 and 2019, enter the planned revenue-to-cost ratios that will be "Change" or "No Change" in 2017 (in the current Revenue/Cost Ratio Adjustment Workform, Worksheet C1.1 'Decision - Cost Revenue Adjustment, column d), and enter TBD for class(es) that will be entered as 'Rebalance'.

## Rate Design and Revenue Reconciliation

This sheet replaces Appendix 2-V, and provides a simplified model for calculating the standard monthly and voluemtric rates based on the allocated class revenues and fixed/variable split resulting from the cost allocation study and rate design and as proposed by the applicant. However, the RRWF does not replace the rate generator model that an applicant distributor may use in support of its application. The RRWF provides a demonstrative check on the derivation of the revenue requirement and on the proposed base distribution from a more detailed rate generator model and other models that applicants use for cost allocation, load forecasting, taxes/PILs, etc.

## **Tracking Form**

1

The first row shown, labelled "Original Application", summarizes key statistics based on the data inputs into the RRWF. After the original application filing, the applicant provides key changes in capital and operating expenses, load forecasts, cost of capital, etc., as revised through the processing of the application. This could be due to revisions or responses to interrogatories. The last row shown is the most current estimate of the cost of service data reflecting the original application and any updates provided by the applicant distributor (for updated evidence, responses to interrogatories, undertakings, etc.)

Please ensure a Reference (Column B) and/or Item Description (Column C) is entered. Please note that unused rows will automatically be hidden and the PRINT AREA set when the PRINT BUTTON on Sheet 1 is activated. <sup>(1)</sup>Short reference to evidence material (interrogatory response, undertaking, exhibit number, Board Decision, Code, Guideline, Report of the Board, etc.)

<sup>(2)</sup> Short description of change, issue, etc.
