SENT VIA EMAIL, COURIER AND RESS

Ms. Kirsten Walli
Board Secretary
Ontario Energy Board
2300 Yonge Street
27th Floor, P.O. Box 2319
Toronto, ON M4P 1E4

Re: EB-2018-0191
Application for Leave to Construct
IAMGOLD Corporation

We are counsel to IAMGOLD Corporation in this matter.

Since the Application was filed on July 6, 2018 there have been two developments that require an update to the Pre-filed evidence. The first development is the completion of the Customer Impact Assessment. The second development is the acquisition by IAMGOLD of the remainder of third party mineral rights holders along the proposed transmission line corridor. An electronic copy of the updated portions of the Pre-filed evidence was filed on the Board's RESS system.

As a result of the second development, there is no need for the updated evidence which was previously redacted to continue to be redacted. Further, the evidence originally filed in confidence should retain its confidential nature as previously requested but it is no longer relevant. We have filed clean and blackline versions of the publicly filed exhibits.

If there are any questions, please contact the undersigned at your earliest opportunity.

Yours truly,

AIRD & BERLIS LLP

Scott Stoll

Individual Mining Claim Holder 32899534.432899534.2	Redacted

LAND MATTERS

The land area required for the proposed Transmission Facilities includes lands needed for: (a) connection to Hydro One's Shining Tree JCT; (b) the approximately 44 km of 115 kV transmission line; and (c) customer facilities located within the Mine. It is not anticipated that Hydro One will require any additional land for the Hydro One Project. However, Hydro One land requirements regarding any upstream work by Hydro One in respect of the T2R line will be detailed in a separate leave to construct application by Hydro One.

Aside from where the proposed Transmission Line crosses roadways or railways it is expected that the Transmission Facilities will be located entirely on Crown Lands. A landowner list, including third party holders of mining claims, is included at Exhibit E, Tab 1, Schedule 2. IAMGOLD has included a draft form of Transmission Easement, Exhibit E, Tab 1, Schedule 1 Attachment 1. In the event the Transmission Facilities are not located within Crown Land, then the form of agreement provided in Attachment 1 to this Schedule would be offered to any private landowner. The draft form of agreement includes provisions as required by the OEB's *Filing Requirements for Electricity Transmission Applications Chapter 4 – Applications under Section 92 of the Ontario Energy Board Act* (July 31, 2014). IAMGOLD has in the Application, requested approval of the form of agreement as required by Section 95 of the OEB Act.

The Côté Gold Project is located in the District of Sudbury, outside of any lower tier municipality boundary. The proposed Transmission line will intersect with the Geographic Townships of: Miramichi, Garibaldi, Londonderry, Champagne, Benneweis and Chester. The closest local non-Aboriginal communities to the Project site are Gogama, Timmins and Sudbury.

Crown Land

The Ministry of Natural Resources and Forestry ("MNRF") administers Crown land pursuant to the *Public Lands Act*. IAMGOLD has been working with MNRF to obtain the necessary land rights for the Transmission Facilities. According to policies issued by the MNRF electrical transmission lines will require a Multi-Site Land Use Permit, easements and potentially Crown grant in the area

1 of the stations. IAMGOLD is not aware of any impediment that will prevent it from securing the
2 necessary land rights to construct and operate the Transmission Facilities.

3 It is anticipated that IAMGOLD will secure a right of way with an approximate width of 40 to 50
4 metres over the entire length.

5 **Mining Claim Holders**

6 There are no mining rights claim holders not related to IAMGOLD Corporation along the proposed
7 44 km 115 kV transmission line. IAMGOLD has secured claims along the entire length of the
8 transmission corridor and on either side of the corridor. Maps showing the easements are included
9 at Exhibit E, Tab 1, Schedule 1, Attachment 1.

10 **Road and Utility Crossings**

11 The proposed route for the Transmission Facilities will cross roads, including Highway 144, and
12 a railway. The Applicant has and will continue to work with the owners of these facilities to secure
13 the necessary land rights to complete the crossings. In respect of the roadways, the Applicant
14 has included in the Application request for approval pursuant to section 101 of the OEB Act to
15 cross highways, utility lines and ditches as necessary.

be adversely impacted by the connection of the Cote Lake Mine.”

32728831.3

Overview Customer Impact Assessment

The Customer Impact Assessment (“CIA”) is ~~underway and is anticipated to be complete before the end of July 2018. A copy of the CIA will be filed in this Application when it becomes available. IAMGOLD is not expecting any adverse impact to other customers of Hydro One or to the Mine and Project resulting from the CIA~~included at Exhibit G, Tab 1, Schedule 1, Attachment 1. The CIA, at page 5, concludes that the “Hydro One system and customers will not be adversely impacted by the connection of the Cote Lake Mine.”
