Via RESS and Courier 6 November 2018

Ms. Kirsten Walli Board Secretary Ontario Energy Board 2300 Yonge Street, 27th Floor Toronto, Ontario M4P 1E4

Dear Ms. Walli,

Re: Kingston Hydro Corporation _Electricity Distribution License ED-2003-0057 2019 Custom IR Year 4 Application for Electricity Distribution Rates (EB-2018-0047) Follow-up Interrogatory Responses and Application Updates

Please find interrogatory responses and supporting evidence to Ontario Energy Board (OEB) Staff follow-up interrogatories for Kingston Hydro Corporation's Custom IR – Year 4 Update 2019 Distribution Rate Application (EB-2018-0047) that was filed with the OEB on August 31, 2018.

Model updates and cost of power updates have been included as appendices to this follow-up interrogatory responses submission. As well, along with this submission Kingston Hydro Corporation has filed in live Excel format through RESS the following updated models;

- (A) Deferral Variance Account Continuity Schedule,
- (B) GA Analysis Work form,
- (C) Retail Transmission Rates Work form.

Yours truly,

Sherry Gibson

Senior Advisor, Rates and Regulatory Affairs

Kingston Hydro Corporation (Kingston Hydro)

Responses to OEB Staff Follow-up Interrogatories 2019 Electricity Distribution Rates Application

EB-2018-0047 November 06, 2018

Ref: Response to 1-Staff-11

Please provide explanation as to why there are differences between what the OEB had approved for disposition and the amounts actually disposed.

Kingston Response: The difference relates to the projected interest calculated in the DVA continuity schedule when requested for disposition on the balances and the actual interest recorded in the Kingston Hydro's general ledger at year end.

The request of the December 31, 2014 balances the 2016 DVA continuity schedule didn't include the interest on those balances for the 2014 interest amounts. This was than included in the 2017 DVA continuity schedule and disposed of.

		Interest Adjustments(2) during 2016	Interest Adjustments(2) during 2017	Difference
LV Variance Account	1550	-\$3,424	\$3,088	-\$336

Kingston Hydro Corporation Custom IR Year 4 Update EB-2018-0047 Responses to OEB Staff Follow-up Interrogatories November 06, 2018 Page 2 of 6

Ref: Response to 1-Staff-12

a) Please further explain the nature of the errors that gave rise to adjustment recorded and explain what that Applicant has done to ensure that similar errors to not repeat in the future.

Kingston Response: There was an error in how the calculation of HOEP which is used to settle against RPP rates. Kingston Hydro has since modified its reporting to allow for further detailed verification of the HOEP values used to settle against the RPP amounts.

b) In regards to the \$3.3 million in over collection from the IESO, please provide the months and years that these amounts relates to.

Kingston Response:

March-December 2015 \$2,564,883.66

January-December 2016 \$730,913.58

c) Please provide the journal entries that were recorded to account 1588 in order to account for and correct the identified errors.

Kingston Response:

DR. Account 1588

CR. Due to IESO

d) Do the errors identified also relate to the 5M IESO adjustment recorded in account 1589 in 2017?

Kingston Response: No, the errors relate to account 1588 only.

Ref: Response to 1-Staff-13

a) The calculation described in the response provided to Question 2a appears to represent a calculation for the total estimated GA as it multiplies total consumption by the second GA estimate. This question requires you to explain how the RPP related GA is determined for settlement purposes. Please clarify and update accordingly.

Kingston Response: Kingston Hydro uses the RPP consumption billed in the month and multiplies this by the second estimate to determine the GA portion within the RPP rate.

b) In the response provided for Question 2a), is the RPP consumption value that is used in the IESO settlement initially based on an estimate that would need to be trued up to actual subsequently? If no, please explain how the Applicant is able to get actual consumption values so soon after the month-end.

Kingston Response: Yes, the true up to actual GA is based on the previous months billed consumption; for the current reporting monthly Kingston Hydro uses second estimate.

c) For the response provided in 2b, please confirm that the Applicant is indicating that it does not have to true-up its CT1142 settlements with the IESO for consumption because the consumption values used for settlement purposes is based on the actual for month being settled.

Kingston Response: Correct, for the RPP, this is trued up against the HOEP amount that was billed in the current month.

Please also confirm that the Applicant is indicating that it does need to true-up its CT1142 settlements with the IESO for the actual GA rate because the settlements were based on the second GA estimate.

Kingston Response: Confirmed.

- d) In the responses provided for Questions 2c), d), e) and f), the Applicant indicates that a true-up CT1142 for the GA rate used in its December 2017 settlement was completed in January 2018:
 - a. Please confirm that this true-up described represents the amount shown as adjustment 1b in the 2017 GA Analysis Workform. Please also confirm the same for 1b of the 2016 GA Analysis Workform.

Kingston Response: Confirmed.

Kingston Hydro Corporation Custom IR Year 4 Update EB-2018-0047 Responses to OEB Staff Follow-up Interrogatories November 06, 2018 Page 4 of 6

e) In the response provided for Question 3a, please explain whether the Applicant waits for the CT148 invoice from the IESO before it books the expense to their G/L, or does the Applicant initially estimate the expense and records it to their G/L and then trues-up upon receipt of the actual invoice.

Kingston Response: Kingston Hydro waits for the CT148 invoice from the IESO before it books the expense to their G/L so that it is recorded in the proper period.

Ref: Response to 1-Staff-14

a) In the response provided for b) the Applicant has updated the GA Analysis Workform to factor in the impact of the unbilled revenue vs actual. For each of the 2a and 2b adjustments that were added to Note 5 of the 2016 GA Analysis Workform, please provide further explanation for each to support the direction of each of the entries. Please provide the explanations in the context of whether amounts were over or under accrued in relation to the actual billings made subsequently.

Kingston Response:

2a is a credit because this is removing the 2015 revenue that was billed in 2016 but consumed/earned 2015

2b is a debit because this is adding in revenue that was billed in 2017 that was consumed and earned in 2016.

- b) In the response to d) the Applicant discusses differences between the IESO posted rate and the actual rate that gets invoiced from the IESO and why this becomes a reconciling item in Note 5 of the GA Analysis Workform.
 - a. When the applicant does its monthly true-up of CT 1142 whereby it truesup the GA rate used for settlement purposes to the actual GA rate, is this true-up done to the actual posted rate (per the IESO website) or the actual invoiced rate (per the CT 148 invoice)?

Kingston Response: This is based on the rate posted by the IESO.

b. It appears that the entire balance of the billing adjustments from the IESO is being allocated to Non-RPP customers and left in account 1589 for disposition. Please explain how the Applicant is certain that all billing adjustments relate to Non-RPP customers (this applies to both the 2016 and 2017 billing adjustment per the GA Analysis Workforms).

Kingston Hydro Corporation Custom IR Year 4 Update EB-2018-0047 Responses to OEB Staff Follow-up Interrogatories November 06, 2018 Page 5 of 6

Kingston Response: The balance of the billing adjustments is allocated to non-RPP because Kingston Hydro determines the total Global Adjustment for RPP customers based on the actual Global Adjustment rate provided by the IESO and therefore the adjustment would all be Non-RPP.

c) In the response provided to e) ii, the Applicant has indicated that the GA Analysis Workform had been updated to reflect the fact that not the entire amount of the IESO adjustment related to account 1589. It appears that the new amount has not been reflected in the GA Analysis Workform as was indicated. Please update accordingly.

Kingston Response: The model has been updated.

- d) For the response provided to 1-Staff-14 f), the purpose of the GA Analysis Workform is to identify material adjustments that are required to the balances being sought for disposition in order to ensure these amounts are fair, complete and accurate. Therefore, if material adjustments are required to the proposed disposition amounts (such as true-ups or other), then it is the OEB's expectation that the Applicant will record these adjustments in the DVA continuity schedule as "principal adjustments" irrespective of whether it leads to deviation from its RRR Filing.
 - a. Does the Applicant believe that the impact of the adjustments presented as in the GA Analysis Workform are not material? Please explain.
 - **Kingston Response:** Kingston Hydro believes that the impact of the adjustments presented as in the GA Analysis Workform are not material Kingston Hydro believes that annual recurring reconciling items within the GA workform allows the OEB to verify the RRR filed balances that are requested for disposition are reasonable.
 - b. If the Applicant believes they are material, then please update the DVA continuity schedule to include their impact as "principal adjustments" to account 1589 and/or 1588 as needed.

Kingston Response: N/A.

Kingston Hydro Corporation Custom IR Year 4 Update EB-2018-0047 Responses to OEB Staff Follow-up Interrogatories November 06, 2018 Page 6 of 6

Ref: Response to 1-Staff-15

a) For the response provided to b) I, please provide the responses in the context of whether the amount that was accrued for unbilled was higher or lower than what actually ended up getting billed in the subsequent month.

Kingston Response: The amount that was accrued for unbilled was lower than what actually ended up getting billed in the subsequent month. As with any estimate, amounts accrued in one period may be higher or lower than accrual depending upon the actual amounts billed in subsequent period.

2019 Deferral/Variance Account Workform

Instructions

Tab	Tab Details	Step	Instructions
Tab 2 - Continuity Schedule	This tab is the continuity schedule that shows all the accounts and the accumulation of the balances a utility has.	1	Instructions Complete the DVA continuity schedule. For all accounts, except for Account 1595, start inputting data from the year in which the GL balance was last disposed. For example, if in the 2018 rate application, DVA balances as at December 31, 2016 were approved for disposition, start the continuity schedule from 2016 by entering the closing 2015 balances in the Adjustments column under 2015. For all Account 1595 sub-accounts, complete the DVA continuity schedule for each Account 1595 vintage year that has a GL balance as at December 31, 2017 regardless of whether the account is being requested for disposition in the current application. For each Account 1595 sub-account, start inputting data from the year the sub-account started to accumulate a balance (i.e. the vintage year). For example, Account 1595 (2015) would have information starting in 2015, when the relevant balances approved for disposition were first transferred into Account 1595 (2015). The DVA continuity schedule currently starts from 2012, if a utility has an Account 1595 with a vintage year prior to 2012, then a separate schedule should be provided starting from the vintage year. If you had any Class A customers at any point during the period that the Account 1589 GA balance accumulated (e.g. last disposition was for 2015 balances in the 2017 rate application, current balance requested for disposition accumulated from 2016 to 2017), check off the checkbox in cell BS13. If the checkbox is not checked off, then proceed to tabs 3 to 7 and complete the tabs accordingly. If the checkbox is not checked off, the balance in the Account 1580, sub-account CBR Class B balance accumulated (e.g. 2016, 2017 or 2016 & 2017), check off the checkbox. If you had any Class A customers at any point during the period that the Account 1580, sub-account CBR Class B will be allocated and disposed with Account 1580 WMS, as a part of the
3. Appendix A		2b	general DVA rate rider. If the checkbox is checked off, then tab 6.2 will be generated. This tab will calculate the billing determinants applicable to Account 1580 sub-account CBR Class B, using information inputted in tab 6. See step 12 below for further details. The CBR Class B balance will be allocated in tab 6.2a and the rate rider will be calculated in tab 7. Enter the number of utility-specific 1508 sub-accounts that are approved for the utility in the textbox in cell B71. The DVA continuity schedule will generate the number of utility-specific 1508 sub-accounts starting in row 51. Input the name and the balances of the sub-account(s) starting in row 51. If a utility does not have utility-specific 1508 sub-accounts, the generic 1508 sub-account Other will still be listed in the DVA continuity schedule. Check off the "check to dispose of account" checkbox in column BT for sub-accounts requested for disposition. Provide an explanation for the variances identified.
3. Appendix A	This tab shows the year end balance variances between the continuity schedule		
4 - Billing Determinant	This tab shows the billing determinants that will be used to allocate account balances and calculate rate riders.	4	Complete the billing determinants table. Note that columns O and P are generated when a utility indicates they have Class A customers in tab 2a. Information in these columns are populated based on data from tab 6
5 - Allocating Def- Var Balances	This tab allocates the DVA balance (except for CBR Class B if Class A customers exist).	5	Review the allocated balances to ensure the allocation is appropriate. Note that the allocations for Account 1589, Account 1580, sub-account CBR Class B will be determined after tabs 6 to 6.2a have been completed.
6 - Class A Data	This is a new tab that is to be completed if there were any Class A customers at any point during the period the GA balance CBR Class B balance accumulated. The tab also considers Class A/B transition customers. The data on this tab is used for the purposes	7	This tab is generated when the utility checks in tab 2a. that they have Class A customers during the period that the GA balance accumulated. Under #1, enter the year for which the Account 1589 GA balance was last disposed. Under #2a, indicate whether you had any customers that transitioned between Class A and B during the period the Account 1589 GA balance accumulated. If no, proceed to #3b in step 9. If yes, #2b and tab 6.1a. will be generated. Proceed to #2b. Under #2b, indicate whether you had any customers that transitioned between Class A and B during the period the Account 1580, sub-account CBR Class B balance accumulated. If no, proceed to #3a in step 8. If yes, tab 6.2a. will be generated. Proceed to #3a in step 8.

Consumption	of determining the GA rate rider, CBR Class B rate rider (if applicable), as well as customer specific GA and CBR Class B charges for transition customers (if applicable).	9	Under #3a, enter the number of transition customers during the period the Account 1589 GA balance accumulated. A table will be generated based on the number of customers. Complete the table accordingly for each transition customer identified (i.e. kWh/kW for half year periods, and the customer class during the half year). This data will automatically be used in the GA balance and CBR Class B balance allocation to transition customers in tabs 6.1a. and 6.2a., respectively. Each transition customer identified in tab 6, table 3a will be assigned a customer number and the number will correspond to the same transition customers populated in tabs 6.1a. and 6.2a. The data in tab 6 will also be used in the calculation of billing determinants in the allocation of GA and CBR Class B balances to the rate classes, as applicable. Under #3b, enter the number of customers who were Class A customers during the entire period since the year the Account 1589 GA balance accumulated (i.e. did not transition between Class A and B during the period). A table will be generated based on the number of customers. Complete the table accordingly for each Class A customer identified. This data will be used in the calculation of billing determinants in the allocation of GA and CBR Class B balances to the rate classes, as applicable.
6.1a GA Allocation	This tab has been revised. It allocates the GA balance to each transition customer for the period in which these customers were Class B customers and contributed to the GA balance (i.e. former Class B customers who contributed to the GA balance but are now Class A customers and former Class A customers and former Class A customers who are now Class B customers contributing to the GA balance).	10	This tab is generated when the utility indicates that they have transition customers in tab 6, #2a during the period when the GA balance accumulated. In row 20, enter the total Class B consumption which equals to Non-RPP consumption less WMP consumption and consumption for Class A customers (who were Class A for partial and full year). The rest of the information in this tab will be auto-populated and will calculate the customer specific allocation of the GA balance to transition customers in the bottom table. All transition customers who are allocated a specific GA amount are not to be charged the general Non-RPP Class B GA rate rider as calculated in tab 7.
6.2 - CBR	This is a new tab that calculates the CBR Class B rate rider if there were Class A customers at any point during the period that the CBR Class B balance accumulated.	11	This tab is generated when the utility checks in tab 2a. that they have Class A customers during the period that Account 1580, sub-account CBR Class B balance accumulated. The rest of the information in the tab is auto-populated and will be used in the calculation of the CBR Class B rate rider calculated in tab 6.
6.2a - CBR_B Allocation	This is a new tab that allocates the CBR Class B balance to each transition customer for the period in which these customers were Class B customers and contributed to the CBR Class B balance (i.e. former Class B customers who contributed to the balance but are now Class A customers and former Class A customers who are now Class B contributing to the balance).	12	This tab is generated when the utility indicates that they have transition customers in tab 6, #2b during the period where the CBR Class B balance accumulated. In B16 select the year when the balance in CBR Class B was last disposed. In row 20, enter the total Class B consumption which equals to total consumption less WMP consumption and consumption for Class A customers (who were Class A for eiher partial or full year). The rest of the information in this tab will be auto-populated and will calculate the customer specific allocation of the CBR Class B balance to transition customers in the bottom table. Note that the transition customers for GA may be different than the transition customers for CBR Class B as this would depend on the period in which the GA and CBR Class B balances accumulated. Any transition customer who is allocated a specific CBR Class B amount is not to be charged the general CBR Class B rate rider.
7 - Calculation of Def-Var RR	This tab calculates all the applicable DVA rate riders.	13	Enter the proposed rate rider recovery period if different than the default 12 month period. For each rate class of each rate rider, select whether the rate rider is to be calculated on a kWh, kW or number of customers basis. The rest of the information in the tab is auto-populated and the rate riders are calculated accordingly.

2019 Deferral/Variance Account Workfo

This continuity schedule must be completed for each account and sub-account that the ut data from the year in which the GL balance was last disposed. For example, if in the 2017 in the Adjustment column under 2014. For each Account 1595 sub-account, start inputting the relevant balances approved for disposition was first transferred into Account 1595 (20 starting from the vintage year. For any new accounts that have never been disposed, start

Deferral/Variance Account Workfo

This continuity schedule must be completed for each account and sub-account that the ul data from the year in which the GL balance was last disposed. For example, if in the 2017 in the Adjustment column under 2014. For each Account 1595 sub-account, start inputting the relevant balances approved for disposition was first transferred into Account 1595 (20 starting from the vintage year. For any new accounts that have never been disposed, start

If you had any Class A customers at any point during the period that the Account 1589 GA balance accumulated (i.e. from the year the balance was last disposed to 2017), check off the checkbox

If you had Class A customer(s) during this period, Tab 6 will be generated and applicants must complete the information pertaining to Class A customers.

If you had any customers classified as Class A at any point di where the balance in 1580 sub-account CBR Class B accum the year the balance was last disposed to 2017), check off the checkt

If you had Class A customer(s) during this period, Tab 6.2 will Account 1580 sub-account CBR Class B will be disposed throusing information in Tab 6.2.

If you only had Class B customers during this period, the bala sub-account CBR Class B will be allocated and disposed with WMS.

Class A Customers - Billing Determinants by Customer										
Customer	Rate Class		2017	2016						
Customer A1	LARGE USE	kWh	62,042,573	63,654,287						
		kW	113,242	135,941						
Customer A2	LARGE USE	kWh	51,231,227	50,161,880						
		kW	91,788	103,129						
Customer A3	LARGE USE	kWh	44,909,137	40,305,506						
		kW	80,812	80,756						

This tab allocates the GA balance to transition customers (i.e Class A customers who were former Class B customers and Class B customers who were former Class A customers) who contributed to the current GA balance. The tables below calculates specific amounts for each transition customer. The general GA rate rider to non-RPP customers is not to be charged to the transition customers that are allocated amounts in the table below. Consistent with with prior decisions, distributors are generally expected to settle the amount through 12 equal adjustments to bills.

Only for rate classes with WMP customers are the Deferral/Variance Account Rate Riders for Non-WMP calculated separately in the table above. For all rate classes without WMP customers, balances in Accounts 1580 and 1588 are included in Deferral/Variance Account Rate Riders calculated in the first table above and disposed through a combined Deferral/Variance Account and Rate Rider.

Kingston Hydro Corporation Custom IR - Year 4 Update Application EB-2018-0047 Filed: 6 November 2018

Appendix C: RTSR Adjustment Work Form

Appendix C

RTSR Adjustment Work Form

Drop-down lists are shaded blue; Input cells are shaded green.

Utility Name	Kingston Hydro Corporation	
6		
Service Territory		
Assigned EB Number	EB-2018-0047	
Name and Title	Sherry Gibson, Senior Advisor Rates and F	Regulatory Affairs
Phone Number	613-546-1181 ext 2383	
Email Address	sgibson@kingstonhydro.com	
Date	31-Oct-18	
Date	31-00-16	
Last COS Re-based Year	2016	

This Workbook Model is protected by copyright and is being made available to you solely for the purpose of filing your COS application. You may use and copy this model for that purpose, and provide a copy of this model to any person that is advising or assisting you in that regard. Except as indicated above, any copying, reproduction, publication, sale, adaptation, translation, modification, reverse engineering or other use or dissemination of this model without the express written consent of the Ontario Energy Board is prohibited. If you provide a copy of this model to a person that is advising or assisting you in preparing the application or reviewing your draft rate order, you must ensure that the person understands and agrees to the restrictions noted above.

While this model has been provided in Excel format and is required to be filed with the applications, the onus remains on the applicant to ensure the accuracy of the data and the results.

1. Info 6. Historical Wholesale

2. Table of Contents 7. Current Wholesale

3. Rate Classes 8. Forecast Wholesale

4. RRR Data 9. RTSR Rates to Forecast

5. UTRs and Sub-Transmission

- 1. Select the appropriate rate classes that appear on your most recent Board-Approved Tariff of Rates and Charges.
- 2. Enter the RTS Network and Connection Rate as it appears on the Tariff of Rates and Charges

In the green shaded cells, enter billing detail for wholesale transmission for the same reporting period as the billing determinants on Sheet "4. RRR Data". For Hydro One Sub-transmission Rates, if you are charged a *combined* Line and Transformer connection rate, please ensure that both the line connection and transformer connection columns are completed.
