

Chapter 2 Appendices Filing Requirements for Electricity Distribution Rate Applications

Version 2.5 (2019)

Utility Name	Algoma Power Inc.
Assigned EB Number	EB-2019-0019
Name of Contact and Title	Greg Beharriell - Manager, Regulatory Affairs
Phone Number	905-871-0330 ext 3278
Email Address	regulatoryaffairs@fortisontario.com
Test Year	2020
Bridge Year	2019
Last Rebasing Year	2015
Identify the accounting standard used for the test	MIEDO
year	MIFRS
Did you update your depreciation and capitalization policies and reflect the changes in policies in a	
prior rebasing application?	Yes
When did you update your actual depreciation and capitalization policies?	January 1 2013
Identify the year the applicant adopted IFRS for financial reporting purposes	
Are you applying for cost recovery for the test and/or future year(s) for Green Energy initiatives?	No
Is Algoma Power Inc. an embedded distributor?	? No
<u>Notes</u>	
Pale green cells represent input cells.	
Pale blue cells represent drop-down list	s. The applicant should select the appropriate item from the drop-down list.
White cells contain fixed values, automa	atically generated values or formulae.

Appendix 2-A List of Requested Approvals

The distributor must fill out the following sheet with the complete list of specific approvals requested and relevant section(s) of the legislation must be provided. All approvals, including accounting orders (deferral and variance accounts) new rate classes, revised specific service charges or retail service charges which the applicant is seeking, must be separately identified, as well being clearly documented in the appropriate sections of the application.

Additional requests may be added by copying and pasting blank input rows, as needed.

If additional requests arise, or requested approvals are removed, during the processing of the application, the distributor should update this list.

Algoma Power Inc. is seeking the following approvals in this application:

1	Approval to charge distribution rates effective January 1, 2020 to recover a base revenue requirement of \$25,885,176, vincludes a revenue deficiency of \$2,192,853 as detailed in Exhibit 6. The schedule of proposed rates is set out in Exhibit	
2	Approval of the 2020 RRRP Adjustment Factor and the 2020 RRRP Funding amount payable to API, as described in Ex 8	hibit
3	Approval to adjust the Retail Transmission Rates – Network and Connection as calculated in Exhibit 8	
4	Approval of the proposed loss factors as calculated in Exhibit 8	
5	Approval to continue to charge Wholesale Market and Rural Rate Protection Charges approved in the Board Decision a Order in the matter of EB-2018-0294	nd
6	Approval of the Distribution System Plan included in Exhibit 2	

7	Approval of the rate riders for disposition of the Deferral and Variance Accounts, including LRAMVA, as detailed in Exhibit 9
8	Approval for Advanced Capital Module ("ACM") treatment of the 2021 Echo River TS Project and the 2022 Sault Facility Project, as described in Exhibit 2 and the DSP
9	Approval of API's proposed approach for ACM cost recovery in consideration of the RRRP framework, as detailed in Section 1.3.5
10	Such other approvals that API may request and that the OEB accepts
11	(Preliminary Issue) Approval of an amendment of API's electricity distribution licence (EB-2009-0072) to extend the expiry date of certain Distribution System Code and Standard Service Supply Code exemptions to December 31, 2024, as detailed in Section 1.3.6
12	(Preliminary Issue) Approval of API's methodology for allocating costs attributable to the Dubreuilville service area, as summarized in Section 1.3.7
13	(Preliminary Issue) Approval of API's methodologies with respect to ongoing disposition of the Interim Licence Deferral account and with respect to recovery of costs recorded in the Transaction and Integration Costs Deferral Account, both in relation to the Dubreuilville service area, as summarized in Section 1.3.7
14	(Preliminary Issue) Approval, on an interim basis, to continue charging Seasonal rate class customers a rate rider of \$0.0307/kWh related to the Disposition of Account 1574 that would otherwise expire on June 30, 2019, pending the OEB's determination on further disposition of the residual balance in this account, as summarized in Section 1.3.8

1,232	3,033	146.2%
2,679	3,084	15.1%
8,975	10,889	21.3%
- 100	- 157	57.1%
8,875	10,732	20.9%
\$ 6,761	\$ 6,296	-6.9%

Notes to the Table:

- 1. Historical "previous plan" data is not required unless a plan has previously been filed. However, use the last Board-approved, at least on a Total (Capital) Expenditure basis for the last cost of service rebasing year, and the applicant should include their planned budget in each subsequent historical year up to and including the Bridge Year.
- 2. Indicate the number of months of 'actual' data included in the last year of the Historical Period (normally a 'bridge' year):

Explanatory Notes on Variances (complete only if applicable)

Notes on shifts in forecast vs. historical budgets by category

System Access - costs are customer-driven - declining trend in actuals results in lower budget for forecast period

System Renewal - greater number of substation rebuilds during forecast period

System Service - large substation project (Echo River TS) forecasted in 2021 (not started in 2017 as originally planned)

General Plant - new facility construction in 2022; amounts excluding this project are lower than historical due to completion of ROW Hardening program

Notes on year over year Plan vs. Actual variances for Total Expenditures

2015 - primary driver is Hawk Junction (see DSP 4.3.2.1)

2016 - underspending on SR/GP partially offset by overspending on SS

2017 - primary drivers are: Echo River TS project deferred to 2021 and Line Rebuild projects deferred to 2018 due to weather/access

2018 - primary driver is Desbarats facility (see DSP 4.3.2.3)

Notes on Plan vs. Actual variance trends for individual expenditure categories

See Section 4.3.1 of DSP for Year-over-Year detail in each category.

Appendix 2-AC Customer Engagement Activities Summary

Provide a list of customer engagement activities	Provide a list of customer needs and preferences identified through each engagement activity	Actions taken to respond to identified needs and preferences. If no action was taken, explain why.
Customer Satisfaction Surveys		
- Residential & Small Business Customer Survey 2018 (telephone)	The primary purpose of the Annual Customer Satisfaction survey is to gather information about satisfaction, customer affinity, feelings about outages and bills. Respondents are given an openended question to provide suggestions for improvement. For Fall 2018 additional questions around preferred method for LDC to communicate with customers when there is a billing issue or an unplanned outage. Respondents were asked about their satisfaction with their access to services and their priority rating for 12 operational issues.	Questions used in the telephone survey about communication preferences, satisfaction with access to services, and priority ratings were replicated in the Taking A.I.M. online process. Feedback and insights are used to shape the COS 5 year plan.
- Residential & Small Business Customer Survey 2017 & 2016 (telephone)	In addition to the primary purpose of the Annual Customer Satisfaction survey, feedback about the role technology plays in achieving higher levels of service for customers and making the LDC more efficient were asked. Respondents were asked to assign an importance level for 10 customer relevant technologically enabled operational items.	Algoma Power respondents are more cautious about the effect of technology on their lives than other Ontario LDC respondents. Year over year comparison, 2017 vs 2016, of the importance of online access for certain items showed growth. To make getting service easier, Algoma Power responded by putting a series of forms covering 20+ items on their website. Customers can also email customer service directly from the website. Algoma Power also added a "Make Your Voice Count" link to encourage customers to provide their opinions, views and ideas. Taking A.I.M. Chapter 6 and Chapter 7 surveys were enhanced to gather more insight into the technologically enabled operational items.
- Residential & Small Business Customer Survey 2015 (telephone)	In addition to the primary purpose of the Annual Customer Satisfaction survey, Algoma Power took the opportunity to learn more about respondent expectations as they relate to Outages and Outage Management.	Algoma Power survey respondents rate API just as favourably as found in the UtilityPULSE database for other LDCs, as it relates to having a standard of reliability that meets their expectation. However that standard is less stringent. For example 41% of UtilityPULSE database respondents indicated that 1-2 outages per year was acceptable, it was 1 in 3 (32%) for API respondents. Further follow-up on outages and outage management shaped the Taking A.I.M. Chapter 4 survey, included were questions about willingness to pay for improvements in reliability.
- Electricity Safety survey 2015	This is a standardized survey to engage consumers in Algoma Power community about electricity safety.	This was a baseline survey, Algoma results were compared with the results from 34 LDCs.
- Electricity Safety survey 2017		Algoma Power's score of 82 was identical to the average score for 33 Ontario LDCs. In order to help educate, Algoma Power put an interactive electricity safety quiz, with supporting explainer videos, on line.
Community Outreach/Stakeholder Sessions		
Your Kilowatt Hour Sessions - provide walk-in locations for customers to have face-to-face interactions with customer service and/or CDM staff. Opportunity to edcuate customers and address any concerns. Four sessions held in primary locations.		
Your Kilowatt Hour Session - Wawa - January 11, 2018	Scheduled meetings to answer cust questions. 2 Customers made appointments but did not show due to weather conditions.	Spoke with customer about her needs over the phone (how OESP amount is determined, CDM measures, Explanation of delivery charges, Usage chart, doesn't like TOU due to being a senior with limited income and home at peak times). The other came to our office at another time wanting to understand his Equal Billing Plan.
Your Kilowatt Hour Session - Garden River-January 31, 2018	Scheduled meetings to answer cust questions. 1 Customer made appointment but did not show.	Spoke with customer about her needs over the phone.
Your Kilowatt Hour Session - Searchmont - October 10, 2018	Scheduled meetings to answer cust questions. 4 Customers made appointments.	1 cancelled as found API's website helpful to understand delivery charges and to understand her bill. Another cancelled as it worked better for her to attended our office to discuss delivery charges as a seasonal customer. Of the 2 who attended 1 wanted to understand bill (overview) and recieve energy efficiency ideas, and the other wanted to understand his bill relating to seasonal rate class.

	<u></u>				
Your Kilowatt Hour Sessions - St. Joe Island -Nov 27, 2018	Scheduled meetings to answer cust questions. 9 Customers	The topics discussed were Bill understanding, rates, delivery			
	scheduled appointments.	charges, options for electirc heat, and efficiency ideas. One			
		microFit customer requested breakdown on how he was billed.			
Annual ADI Contractor Night Angil 25, 2019	Francis contractors to most suctomor pools	This was provided to him three days after the event.			
Annual API Contractor Night - April 25, 2018	Engage contractors to meet customer needs	Followup with contractor per individual needs			
Annual Roads Superintendents Meeting	Co-ordinate work plans per municipality	Followup with Rd. Sup't per individual needs			
Community Stakeholder Meeting - Nov 28, 2018	Invite all municipalities & boards with presentation covering Customer Engagement, Operations, Capital & Maintenance. Provide updates regarding: o API's Capital and Maintenance Programs 2016/17 o Stakeholdering o Capital Workflow – Road Relocations/Expansions	Minutes sent to all attendees after the event. A few reached out about the "Make Your Voice Count" survey.			
	o Vegetation Management o Forestry activities and timelines o Connection Plans o Working in Proximity, Electrical Hazards etc.				
Forestry Outreach					
- Forestry Outreach - held seven sessions to provide customers with information on API vegetation mananagement program. This forum also allowed for customers to ask questions and provide feedback.					
- Seedy Saturday SSM - March 10, 2018	Vegetation Mgmt Program display/overview: Had a table at this community event and handed out phamplets and brochures on environmental topics and cdm programs. Provided public with info on VM work program and why and how we manage vegetation	API followed up with customers to discuss vegetation management practices, property related concerns and to discuss right tree, right place providing recommendations of plant species based on site locations. API followed up with approximately 15 customers from this event.			
- Sustain Algoma Expo - June 2, 2018	Vegetation Mgmt Program display/overview: Had a table at this community event and handed out phamplets and brochures on environmental topics and cdm programs. Provided public with info on VM work program and why and how we manage vegetation	API followed up with customers to discuss vegetation management practices, property related concerns and to discuss right tree, right place providing recommendations of plant species based on site locations. API followed up with approximately 15 customers from this event.			
- Lower Island Lake landowner Meeting - April 5, 2018	The meeting presentations provided an overview of API's obligation and rights as an LDC to provide safe, reliable service, industry standards and best management practices and API's Vegetation Management Plan as it relates to our service territory. The meeting concluded with a question and answer period for consumers and landowners. Handouts where provided to attendees including API's Frequently Asked Question's, Electrical Safety Authority's (ESA) brochures: ESA Tree Trimming, ESA Tree Trimming Obligations and ESA Tree Planting Guide, and Corridors for Life brochure on Right, Tree, Right Place.	Contacted individual customers who were having concerns with the VM program, 5 additional site visits resulted			
- Wawa Notification Meeting Wawa – June 7, 2018	The meeting presentations provided an overview of API's obligation and rights as an LDC to provide safe, reliable service, industry standards and best management practices and API's Vegetation Management Plan as it relates to our service territory. The meeting concluded with a question and answer period for consumers and landowners. Handouts where provided to attendees including API's Frequently Asked Question's, Electrical Safety Authority's (ESA) brochures: ESA Tree Trimming, ESA Tree Trimming Obligations and ESA Tree Planting Guide, and Corridors for Life brochure on Right, Tree, Right Place.	Contacted individual customers who were having concerns with the VM program, more site visits resulted			
- Bruce Mines Community Meeting - June 25, 2018	The meeting presentations provided an overview of API's obligation and rights as an LDC to provide safe, reliable service, industry standards and best management practices and API's Vegetation Management Plan as it relates to our service territory. The meeting concluded with a question and answer period for consumers and landowners. Handouts where provided to attendees including API's Frequently Asked Question's, Electrical Safety Authority's (ESA) brochures: ESA Tree Trimming, ESA Tree Trimming Obligations and ESA Tree Planting Guide, and Corridors for Life brochure on Right, Tree, Right Place.				

	The meeting presentations provided an overview of API's obligation and rights as an LDC to provide safe, reliable service, industry standards and best management practices and API's Vegetation Management Plan as it relates to our service territory. The meeting concluded with a question and answer period for consumers and landowners. Handouts where provided to attendees including API's Frequently Asked Question's, Electrical Safety Authority's (ESA) brochures: ESA Tree Trimming, ESA Tree Trimming Obligations and ESA Tree Planting Guide, and Corridors for Life brochure on Right, Tree, Right Place.	Contacted individual customers who were having concerns with the VM program, 4 additional site visits resulted				
	The meeting presentations provided an overview of API's obligation and rights as an LDC to provide safe, reliable service, industry standards and best management practices and API's Vegetation Management Plan as it relates to our service territory. The meeting concluded with a question and answer period for consumers and landowners. CDM Outreach						
, o		As a result of the knowledge gained about the operations of these customers, API is able to proactively reach out to these customers as new programs become available. These customers also reach out to API to seek advice as they make their own investment decisions.				
·	Wawa Energy Plan Implementation Initiative - Addresses energy efficeincy concepts and programs	Program information provided directly to attendees at the event, inclusive of application avenues and contact information.				
	Presentation Re: SOE incentives for businesses, specifically the Retrofit program	Continual communication as program participation interest arises.				
	Promotion of Save ON Energy suite of programs as well as the AffordAbility Fund program.	Program information provided directly to customers at the event, inclusive of application avenues and contact information.				
Other Supporting Engagement Activities						
, , ,	Social media consumption has been fairly low (approx 3% of total customers)	channels (Twitter and Facebook) to keep following customers informed.				
		The API website is constantly responding to these requests with content updates to ensure the information is kept current with what's going on in the industry and what's important to customers				
- Technology Based	consumption and bill payment	Myhydro Eye and e-billing information is provided to customers who subscribe to the services.				
- Front Desk Support	· · · · · · · · · · · · · · · · · · ·	API will continue to foster this form of communication as it allows				
Newsletter - sent out May and November, 2018	requested for bill payments or general inquiries These Newsletters advise of Safety concerns, Engagement tools,	the organization to "connect" with customers.				
	Contests, What we are doing in our Communities, Regulatory information. November contained "Make Your Voice Count" survey information and invitation to add input. November also covered charges and rate application information in the "Legislation Corner."					
- Social Services	Low income customers have unique needs to support payment of services.	API recognizes these needs and will make every effort to communicate special programs and/or services to support eligible customers.				
Taking AIM - Customer Engagement Program						
- UtilityPULSE facilitated review of Customer Engagement activities	The purpose of this session was to: - Conduct a review of current CE activities - Leverage CE activities for gathering feedback - Identify ways to get the best from internal resources - Ensure understanding of requirements to support COS application	Clarification of roles and responsibilities between internal resources, corporate resources and third party resources as they relate to various customer engagement activities. Project timetable was also established. UtilityPULSE also lead a discussio about current industry & customer trends. Action was taken to leverage API's investment in the annual telephone customer survey to capture additional customer feedback. Topic areas for online surveys were identified.				
	disposition, i.e., positive or negative, towards Algoma Power as a company. Respondents would be introduced to important concepts such as: Make Your Voice Count and Wisdom from	AP is very highly rated as a trusted and trustworthy company. This finding, along with others in Chapter 1 survey, helped shape the style and format of future chapter surveys. Respondents were given "open" space to provide feedback about the COS application, their wants & needs, and any other topic they would				

Taking AIM Applied Incights Methodology 7 online surveys 2010	Chantar curvey 2 is decired to govern reasonandent's knowledge	Manufodge level chaut the industry is law, the average coord was
- Taking AIM Applied Insights Methodology 7 online surveys 2018-2019 - Chapter survey 2	level about the industry. This survey is meant as an industry educational piece for respondents. Respondents were introduced to a concept called Test Your Knowledge. This was a Level 1 Engagement survey which is about raising awareness and providing education.	Knowledge level about the industry is low, the average score was 35 out of 100. However we did learn that there was no need to shy away from putting actual \$\$\$ in costs or investments in questions. However future chapter surveys will have to take into account that the knowledge level is low.
- Taking AIM Applied Insights Methodology 7 online surveys 2018-2019 - Chapter survey 3	Chapter survey 3 is about gaining a better understanding of customer priorities and testing out various strategy options for dealing with issues which affects costs. This was a Level 2 (Gathering Feedback) and Level 3 (Capturing Insights by Involving Stakeholders) engagement survey. This survey also introduced respondents to a concept called Help Us Decide.	Respondents were asked to assign a priority level to 13 operational items which affect costs. Results are used to determine which items have more support by the customer base. Findings include, from respondent feedback, the majority of respondents support status quo or current standards as it relates to things such as: vegetation management. Survey results also show that current availability of call-centre staff can continue at current levels.
- Taking AIM Applied Insights Methodology 7 online surveys 2018-2019 - Chapter survey 4	and Level 3 engagement survey. Bills & blackouts (outages) are known as the "Killer B's" - a very important topic for customers. Barriers to moving to e-bills were ranked by respondents. Questions about current reliability standards, expectations about	Survey results do not support a need to raise current standards are they relate to: accurately billing customers, standard of reliability, or quickly handling outages. API learned that the 2 major barriers for moving customers to e-bills was "some customers do not have access to the internet" and "some customers are not comfortable with technology". API also learned that customers much prefer telephone notification for push type of communications over other means. These findings, coupled with other findings in the Taking A.I.M. process indicates that the adoption for technology based operational improvements will be slower than LDCs in large urban areas.
- Taking AIM Applied Insights Methodology 7 online surveys 2018-2019 - Chapter survey 5	Chapter survey 5 is about prioritizing capital investments in the electricity network. This is a Level 2 and Level 3 engagement survey. Topics covered include: Consulting other electricity entities when planning capital expenses for the electricity network, Meeting regulatory and legal requirements, Replacing equipment, Planning for the longer term, Keeping facilities, tools, and equipment in good working order.	API's COS application is influenced by findings from consultation and interaction with other parties regarding local and regional planning issues. Findings include: System access investments should be about meeting mandated obligations and helping the community. Going forward System Renewal should be at a level that doesn't increase outages any higher than those experienced over the past 3 years. The COS application should maitain the current level of investment in facilities, tools and equipment.
- Taking AIM Applied Insights Methodology 7 online surveys 2018-2019 - Chapter survey 6	concepts as they relate to subjects such as: communication, customer care operations, satisfaction with information provided	Findings include a desire for more communication. API put an electricity safety quiz with explainer videos on their website. Respondents were asked about their willingness to pay for 12 Customer Care operational items, Chapter 7 questions on the same 12 items were adjusted in order to gain further insight. Findings also show that respondents would support a pragmatic approach to retro-fitting or replacing facilities.
- Taking AIM Applied Insights Methodology 7 online surveys 2018-2019 - Chapter survey 7	Chapter survey 7 is about specific DSP topics, capital and other investments in Operations and Customer Care operational changes/enhancements. This survey is a Level 3 and Level 4 engagement survey.	Decision making for API's COS application will be influenced by respondents' ranking of 9 decision-making criteria. The top three: Keep costs low. Maintain safe, reliable distribution of electricity and reduce response times to outages. Data shows there were 8% of respondents unwilling to pay any additional costs for any items such as system renewal, system service, general plant and vegetation management. Regardless of the rationale used to support COS increases, there will be a small but important respondent group who will oppose the increase. However, a clear majority support inflationary type increases.

General Instructions to MIFRS Appendices Types of Schedules to File

The purpose of this tab is to provide general instructions. The specific instructions to each appendix are listed in footnotes of each appendix.

The typical applicant is expected to have made capitalization and depreciation policy changes under CGAAP as permitted by the Board on January 1, 2012 or mandated by the Board by January 1, 2013, and adopted IFRS for reporting purposes on January 1, 2015 (transition date January 1, 2014). Some distributors filing for 2018 rates have rebased with these accounting changes reflected in a prior rebasing application. If that is the case, information relating to pre-accounting policy changes is not generally required. The information to be provided by applicants will depend on when the accounting policy changes were made and when they last rebased. In general, applicants should provide the following information in the appendices:

	2019 Test
	2018 Bridge
Information to	2017 Historical
be filed in 2019	2016 Historical
CoS Application	2015 Historical
Application	2014 Historical
	2013 Historical

Reflecting Accounting P	Reflected Accounting Policy Changes in Prior Application ³					
Accounting Policy Changes in 2012 and Adopted IFRS in 2015	Accounting Policy Changes in 2013 and Adopted IFRS in 2015	Adopted IFRS in 2015				
MIFRS	MIFRS	MIFRS				
MIFRS	MIFRS	MIFRS				
MIFRS	MIFRS	MIFRS				
MIFRS	MIFRS	MIFRS				
MIFRS and Revised CGAAP ¹	MIFRS and Revised CGAAP ¹	MIFRS and Revised CGAAP ¹				
Revised CGAAP	CGAAP and Revised CGAAP ²	N/A				
CGAAP and Revised CGAAP ²	N/A	N/A				

- 1) For the transition year (2014), the applicant may file two appendices, one under Revised CGAAP and one under MIFRS, depending on the materiality of impacts. See the specific instructions under each appendix below for further details.
- 2) For applicants that are reflecting accounting policy changes for the first time in a rebasing application, the applicant must file two appendices in the year that the applicant implemented changes to its capitalization and depreciation policies (2012 or 2013), one before and one after the policy changes.
- 3) Applicants should provide CGAAP and Revised CGAAP schedules (i.e. as indicated in the first two columns of the above table) to support balances in Account 1576 if the account has yet to be disposed of.

Appendix 2-BA - Fixed Asset Schedule

Applicants are to provide Appendix 2-BA in accordance with the years and corresponding accounting standards noted in the above table to provide a year over year continuity in fixed assets. For the transition year (2014), the applicant should file two appendices, one under Revised CGAAP and one under MIFRS if the change between Revised CGAAP and MIFRS is material. If the change from the accounting standards is not material, the applicant may choose to only provide one appendix under MIFRS. However, the applicant must also indicate the fixed asset net book value balance under Revised CGAAP, the total dollar value of the change and explain why it is not material.

The applicant must establish the continuity of historic cost for gross assets and accumulated depreciation by asset class by ensuring that the opening balance in the year agrees to the closing balance in the prior year.

Appendix 2-Cx - Depreciation and Amortization

Applicants are to provide Appendix 2-C in accordance with the years and corresponding accounting standards listed in the above table.

Appendix 2-C is to be used under all three of the scenarios presented in the table above. In the appendix, the applicant will need to indicate which scenario applies. The appendix is to be duplicated for each year and accounting standard required under the scenario.

Depreciation accounting policy changes were mandated by the Board by January 1, 2013. In general, no further changes to an applicant's depreciation policy (i.e. assets' service lives) are expected after the Board mandated changes by January 1, 2013. If the applicant has made any changes to its depreciation policy subsequent to the Board mandated changes, for the year of the change, applicants must also explain the nature of the change, quantify the impact of the change, and quantify the depreciation expense before and after the change.

Appendix 2-E - Account 1575, IFRS-CGAAP Transitional PP&E Amounts (2-EA), Account 1576, Accounting Changes Under CGAAP (2-EB, 2-EC) CONTACT OEB STAFF IF TAB REQUIRED

- 1) For an applicant that has a balance in Account 1576 to dispose:
 - If an applicant changed capitalization and depreciation policies effective January 1, 2012, the applicant must complete Appendix 2-EB
 - If an applicant changed capitalization and depreciation policies effective January 1, 2013, the applicant must complete Appendix 2-EC
- 2) For an applicant that has a balance in Account 1575 to dispose:
 - The applicant must complete 2-EA

If the applicant did not make any further PP&E accounting policy changes beyond the capitalization and depreciation policy changes as mandated by the Board by January 1, 2013 (i.e. no further changes made on transition to IFRS), the applicant must indicate this and does not need to complete Appendix 2-EA.

Appendix 2-Y - Summary of Impacts to Revenue Requirement from Transition to MIFRS CONTACT OEB STAFF IF TAB REQUIRED

An applicant must provide a summary of the dollar impacts of MIFRS to each component of the revenue requirement (e.g. rate base, operating costs, etc.), including the overall impact on the proposed revenue requirement.

Accordingly, the applicant must identify financial differences and resulting revenue requirement impacts arising from the adoption of MIFRS as compared to CGAAP. If the applicant is reflecting the changes in capitalization and depreciation policies for the first time in a rebasing application, then a comparison between MIFRS and CGAAP after the change in accounting policies should be completed.

Appendix 2-D Overhead Expense

Applicants are to provide a breakdown of OM&A before capitalization in the below table. OM&A before capitalization may be broken down by cost center, program, drivers or another format best suited to focus on capitalized vs. uncapitalized OM&A.

OM&A Before Capitalization	His	2015 Historical Year		2016 Historical Year		2017 Historical Year		2018 Historical Year		2019 Bridge Year	2020 Test Year	
Operations and Maintenance	\$	7,746,765	\$	7,665,358	\$	7,852,512	\$	8,270,225	\$	8,341,726	\$	8,335,081
Billing and Collecting	\$	983,003	\$	896,275	\$	888,391	\$	939,527	\$	1,013,631	\$	1,030,997
Community Relations	\$	24,430	\$	32,308	\$	47,552	\$	141,890	\$	94,552	\$	96,558
Administrative and General	\$	4,530,641	\$	4,536,039	\$	4,495,877	\$	4,373,361	\$	4,846,021	\$	5,507,487
Total OM&A Before Capitalization (B)	\$	13,284,839	\$	13,129,980	\$	13,284,332	\$	13,725,003	\$	14,295,931	\$	14,970,123

Applicants are to provide a breakdown of capitalized OM&A in the below table. Capitalized OM&A may be broken down using the categories listed in the table below if possible. Otherwise, applicants are to provide its own break down of capitalized OM&A.

Capitalized OM&A	2015 Historical Year	2016 Historical Year	2017 Historical Year	2018 Historical Year	2019 Bridge Year	2020 Test Year	Directly Attributable? (Yes/No)	Explanation for Change in Overhead Capitalized
employee benefits								
costs of site preparation								
initial delivery and handling costs								
costs of testing whether the asset is functioning properly								
professional fees								
costs of opening a new facility								
costs of introducing a new product or service (including costs of								
advertising and promotional activities)								
costs of conducting business in a new location or with a new class of								
customer (including costs of staff training)								
administration and other general overhead costs								
								No change since last CoS, costs are directly attributable to
								labour costs charged to capital and are included in burden
								rate. Balance includes all directly attributable costs except
								for direct wages. Pension and OPEB amounts capitalized
Operational Departments	\$ 1,450,337	\$ 1,303,871	\$ 1,137,129	\$ 1,558,585	\$ 1,325,426	\$ 1,254,834	Yes	are reported above.

Appendix 2-FA

Renewable Generation Connection Investment Summary (past investments or over the future rate setting period) **N/A for this Application**

Enter the details of the Renewable Generation Connection projects as described in the appropriate section of the Filing Requirements.

All costs entered on this page will be transferred to the appropriate cells in the appendices that follow.

For Part A, Renewable Enabling Improvements (REI), these amounts will be transferred to Appendix 2 - FB

For Part B, Expansions, these amounts will be transferred to Appendix 2 - FC

If there are more than **five** projects proposed to be in-service in a certain year, please amend the tables below and ensure that the formulae for the Total Amounts in any given rate year are updated. Based on the current methodology and allocation, amounts allocated represent 6% for REI Connection Investments and 17% for Expansion Investments. (EB-2009-0349, 6-10-2010, p. 15, note 9)

There are two scenarios described below. Separate sets of spreadsheets (2-FA, 2-FB, 2-FC) should be submitted for each scenario as required.

Scenario 1: Past Investments with No Recovery. The distributor has made investments in the past (during the IRM Years), but has not received approval for these projects and therefore did not receive

revenue from the IESO under Regulation 330/09 and did not receive ratepayer revenue for the direct benefit portion of the investment.

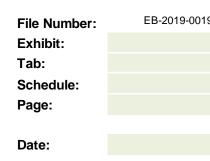

The WCA percentage, debt percentages, interest rates, kWh, tax rates, amortization period, CCA Class and percentage should correspond to the distributor's last Cost of Service approval.

The Direct Benefit portion of the calculated Revenue Requirement for each year should be summed and can be applied for recovery from the distributor's ratepayers through a rate rider.

The Provincial Recovery portion of the calculated Revenue Requirement for each year should be summed and can be applied for recovery from the IESO through a separate order.

Scenario 2: Investments in the Test Year and Beyond. Distributor plans to make investments in 2017 and/or beyond. These investments should be added to 2-FA in the appropriate year. The WCA percentage, debt percentages, interest rates, kWh, tax rates, amortization period, CCA Class and percentage should correspond to the distributor's current application.

Appendix 2-FB

Calculation of Renewable Generation Connection Direct Benefits/Provincial Amount: Renewable Enabling Improvement Investments

N/A for this Application

This table will calculate the distributor/provincial shares of the investments entered in Part A of Appendix 2-FA.

Enter values in green shaded cells: WCA percentage, debt percentages, interest rates, kWh, tax rates, amortization period, CCA Class and percentage.

For historical investments, enter these variables for your last cost of service test year. For 2017 and beyond, enter variables as in the application.

Appendix 2-FC

Calculation of Renewable Generation Connection Direct Benefits/Provincial Amount: Renewable Expansion Investments

N/A for this Application

This table will calculate the distributor/provincial shares of the investments entered in Part B of Appendix 2-FA.

Enter values in green shaded cells: WCA percentage, debt percentages, interest rates, kWh, tax rates, amortization period, CCA Class and percentage.

For historical investments, enter these variables for your last cost of service test year. For 2016 and beyond, enter variables as in the application.

Rate Riders are not calculated for the Test Year as these assets and costs are already in the distributor's rate base.

Notes:

- List and specify any other interest revenue.

 In the transition year to IFRS, the applicant is to present information in both MIFRS and CGAAP. In column N, present CGAAP transition year information. For the typical applicant that adopted IFRS on January 1, 2015, 2014 must be presented in both a CGAAP and MIFRS basis.

Appendix 2-I Load Forecast CDM Adjustment Work Form (2018)

Appendix 2-I was initially developed to help determine what would be the amount of CDM savings needed in each year to cumulatively achieve the four year 2011-2014 CDM target. This then 2018 is the fourth year of the six-year (2015-2020) Conservation First program. Final results for the 2011-14 program were issued in the fall of 2015, and the program is completed, although in The new six year (2015-2020) CDM program works in a slightly different manner to the previous 2011-2014 CDM program. Distributors will offer programs each year that, over the six years (from

2015-2020 CDM Program - 2018 fourth year of the current CDM plan

For the first year of the new 2015-2020 CDM plan, it is assumed that each year's program will achieve an equal amount of new CDM savings. This results in each year's program being about 1/6

Note: The default formulae in the above table assume that the 2015-2020 kWh CDM target is achieved through persistence of CDM savings to the end of 2020. The distributor should enter

Determination of 2018 Load Forecast Adjustment

The Board determined that the "net" number should be used in its Decision and Order with respect to Centre Wellington Hydro Ltd.'s 2013 Cost of Service rates (EB-2012-0113). This approach has

From each of the 2006-2010 CDM Final Report, and the 2011 to 2016 CDM Final Reports, issued by the OPA/IESO for the distributor, the distributor should input the "gross" and "net" results of the

	Net-to-Gross Conve	rsion									
Is CDM adjustment being done on a "net" or "gross" basis?	s CDM adjustment being done on a "net" or "gross" basis?										
	"Gross"	"Net"	Difference	"Net-to-Gross" Conversion Factor							
Persistence of Historical CDM programs to 2015	kWh	kWh	kWh	('g')							
2006-2010 CDM programs											
2011 CDM program											
2012 CDM program											
2013 CDM program											
2014 CDM program											
2015 CDM program											
2016 CDM program											
2006 to 2016 OPA CDM programs: Persistence to 2018.	_	0	0 (0.00%							

The default values below represent the factor used for how each year's CDM program is factored into the manual CDM adjustment. Distributors can choose alternative weights of "0", "0.5" or "1"

These factors do not mean that CDM programs are excluded, but the assumption that impacts of previous year CDM programs are already implicitly reflected in the actual data for historical years

Weight Factor for Inclusion in CDM Adjustment to 2018 Load Forecast

	2015	2016	2017	2018	2019	2020	
Weight Factor for each year's CDM program impact on 2018 load forecast	0	0	0	1	0.5	1	Distributor can select "0", "0.5", c "1" from drop- down list
Default Value selection rationale.	Full year impact of 2015 CDM is assumed to be reflected in the base forecast, as the full year persistence of 2015 CDM programs is in the 2016 historical actual data. No further impact is necessary for the manual adjustment to the load forecast.	Default is 0.5, but one option is for full year impact of persistence of 2016 CDM programs on 2018 load forecast, but 50% impact in base forecast (first year impact of 2016 CDM programs on 2016 actuals, which is part of the data underlying the base load forecast).	Full year impact of persistence of 2017 programs on 2018 load forecast. 2017 CDM program impacts are not in the base forecast.	Only 50% of 2017 CDM programs are assumed to impact the 2018 load forecast based on the "half-year" rule.	2019 and 2020 are future years beyond the 2018 test year. No impacts of CDM programs beyond the 2018 test year are factored into the test year load forecast.		

2015-2020 LRAMVA and 2018 CDM adjustment to Load Forecast

One manual adjustment for CDM impacts to the 2018 load forecast is made. There is a different but related threshold amount that is used for the 2018 LRAMVA amount for Account 1568.

The amount used for the CDM threshold of the LRAMVA is the kWh that will be used to determine the base amount for the LRAMVA balance for 2018, for assessing performance against the six-year target.

If used to determine the manual CDM adjustment for the system purchased kWh, the proposed loss factor should correspond with the proposed total loss factor calculated in Appendix 2-R.

The Manual Adjustment for the 2018 Load Forecast is the amount manually subtracted from the system-wide load forecast (either based on a purchased or billed basis) derived from the base forecast from historical data. If the distributor has developed their load forecast on a system purchased basis, then the manual adjustment should be on a system purchased basis, including the adjustment for losses. If the load forecast has been developed on a billed basis, either on a system basis or on a class-specific basis, the manual adjustment should be on a billed basis, excluding losses.

The distributor should determine the allocation of the savings to all customer classes in a reasonable manner (e.g. taking into account what programs and what IESO-measured impacts were directed at specific customer classes), for both the LRAMVA and for the load forecast adjustment.

	2015	2016	2017	2018	2019	2020	Total for 2020
Amount used for CDM threshold for LRAMVA (2020)				7,237,615.43	509,000.00	549,000.00	8,295,615.43
Manual Adjustment for 2018 Load Forecast (billed basis)	-			7,237,615.43	254,500.00	549,000.00	8,041,115.43
Manual Adjustment for 2018 LDC- only CDM programs (billed basis)							
Total Manual Forecast to Load Forecast	-	-	-	7,237,615.43	254,500.00	549,000.00	8,041,115.43
Proposed Loss Factor (TLF)	8.29%	Format: X.XX%					
Maṅual Adjustment tòr 2018 Load Forecast (system purchased basis)	-	-	-	7,837,613.75	275,598.05	594,512.10	8,707,723.90

Manual adjustment uses "gross" versus "net" (i.e. numbers multiplied by (1 + g). The Weight factor is also used to calculate the impact of each year's program on the CDM adjustment to the

Appendix 2-IA Instructions on Customer, Connections, Load Forecast and Revenues Data and Analysis

This sheet requires no inputs, but serves as a summary of the hiostorical and forecasted data to be provided with respect to:

- 1) Customers and connections
- 2) Consumption (kWh)
- 3) Demand (kW or kCA) for applicable demand-billed customer classes
- 4) Revenues

The spreadsheet summarizes the data provided and the analyses (variance or year-over-year) that are required. Data are required to be provided on a customer class level. Consumption (kWh) must also be provided on a total distribution system level.

Appendix 2-IB (formerly 2-IA) is the appendix spreadsheet that the distributor populates, and the spreadsheet is laid out for inputting the necessary data. The spreadsheet also calculates necessary statistics such as average consumption per customer/connection per year, and variances and % annual changes, as necessary.

The distributor is required to provide suitable documentation in Exhibit 3 of its Application, in accordance with section 2.3.2 of Chaoter 2 of the Filing Requirements. This would include explanations for material variations or of trends in the data.

The distributor is also required to input its test year customer/connection and load forecast in Sheet 10 - Load Forecast of the Revenue Requirement Work Form. This sheet should also be updated to reflect changes in the load forecast made through the stages of processing of the rates application.

The applicant must demonstrate the historical accuracy of its load forecast approach for at least the past 5 years. Such analysis will cover both customer/connections and consumption (kWh) and demand (kW or kVA) by providing the following, as shown in the following table:

	Calendar Year	Custor	ners / Connections	Cor	sumption (kWh) ⁽³⁾		Demand (kW o	or kVA)	Re	evenues
	(for 2020 Cost of Service)			Weather-actua	I Weather-normalized	Weather actual	- Weathe	er-normalized	Weather- actual	Weather- normalized

Historical	2016	Actua	Board-approved (2)	Actual	Actual (1) Board-approved (2)	Actual	Actual (1)	Board-approved (2)	Actual	
Historical	2017	Actua		Actual	Actual (1)	Actual	Actual (1)		Actual	
Historical	2018	Actua	l l	Actual	Actual (1)	Actual	Actual (1)		Actual	
Bridge Year (Forecast)	2019	Foreca	st		Forecast		Forecast			Forecast
Test Year (Forecast)	2020	Foreca	st		Forecast		Forecast			Forecast

Notes:

- "Weather-normalized actuals" are estimated by replacing the actual weather-related values (typically Heating Degree Days (HDD) and Cooling Degree Days (CDD)) by the "typical" or "weather-normalized" values. These "weather-normalized HDD and CDD values would be the same as used to estimate the Bridge Year and Test Year forecasts.
- For 2017 Cost of Service rebasers, the typical situation is that 2013 would have been the most recent cost of service rebasing application. If the most recent rebasing application was for a rate year other than 2013, that year should be used. An applicant must provide historical information back to the greater of: a) at least five (5) historical actual years; or b) to its last cost of service application.
- (3) Consumption must be provided on a total distribution system basis as well as at a customer class level.

Appendix 2-IB Customer, Connections, Load Forecast and Revenues Data and Analysis

This sheet is to be filled in accordance with the instructions documented in section 2.3.2 of Chapter 2 of the Filing Requirements for Distribution Rate Applications, in terms of one set of tables per customer class. Notes:

- 1 For each year, a detailed explanation for each cost driver and associated amount is requied in Exhibit 4.
- 2 Opening Balance for "Last Rebasing Year" (cell B15) should be equal to the Board-Approved amount. For purposes of assessing incremental cost drivers, the closing balance for each year becomes the opening balance for the next year.
- 3 If it has been more than four years since the applicant last filed a cost of service application, additional years of historical actuals should be incorporated into the table, as necessary, to go back to the last cost of service application. If the applicant last filed a cost of service application less than four years ago, a minimum of three years of actual information is required.

Notes:

¹ Please provide a breakdown of the major components of each OM&A Program undertaken in each year. Please ensure that all Programs below the materiality threshold are included in the miscellaneous line. Add more Programs as required.

² The applicant should group projects appropriately and avoid presentations that result in classification of significant components of the OM&A budget in the miscellaneous category

Notes:

- If it has been more than four years since the applicant last filed a cost of service application, additional years of historical actuals should be incorporated into the table, as necessary, to go back to the last cost of service application. If the applicant last filed a cost of service application less than four years ago, a minimum of three years of actual information is required.
- 2 The method of calculating the number of customers must be identified. Should correspond with data provided in Appendix 2-IB.
- 3 The method of calculating the number of FTEs must be identified. See also Appendix 2-K.
- 4 The number of customers and the number of FTEs should correspond to mid-year or average of January 1 and December 31 figures.
- 5 For the test year, the applicant should take into account the system O&M (line 22 of Appendix 2-AB) in developing its forecasted OM&A.

Appendix 2-R Loss Factors

			5 W A				
		2014	2015	2016	2017	2018	5-Year Average
	Losses Within Distributor's System						
A(1)	"Wholesale" kWh delivered to distributor (higher value)	224,055,026	218,359,584	213,114,845	219,147,652	243,134,751	223,562,371
A(2)	"Wholesale" kWh delivered to distributor (lower value)	223,056,717	217,389,981	212,169,174	218,174,267	242,054,719	222,568,972
В	Portion of "Wholesale" kWh delivered to distributor for its Large Use Customer(s)	-	-	-	-	-	-
С	Net "Wholesale" kWh delivered to distributor = A(2) - B	223,056,717	217,389,981	212,169,174	218,174,267	242,054,719	222,568,972
D	"Retail" kWh delivered by distributor	205,806,696	200,913,700	197,489,288	203,142,174	224,890,511	206,448,474
E	Portion of "Retail" kWh delivered by distributor to its Large Use Customer(s)	-	-	-	-	-	-
F	Net "Retail" kWh delivered by distributor = D - E	205,806,696	200,913,700	197,489,288	203,142,174	224,890,511	206,448,474
G	Loss Factor in Distributor's system = C / F	1.0838	1.0820	1.0743	1.0740	1.0763	1.0781
	Losses Upstream of Distributor's S	ystem					
Н	Supply Facilities Loss Factor	1.0045	1.0045	1.0045	1.0045	1.0045	1.0045
	Total Losses						
,I	Total Loss Factor = G x H	1.0887	1.0869	1.0792	1.0788	1.0812	1.0829

Notes:

If fully embedded within a host distributor, kWh pertains to the virtual meter on the primary or high voltage side of the transformer, at the interface between the host distributor and the transmission grid. For example, if the host distributor is Hydro One Networks Inc., kWh from the Hydro One Networks' invoice corresponding to "Total kWh w Losses" should be reported. This corresponds to the higher of the two kWh values provided in Hydro One Networks' invoice.

If partially embedded, kWh pertains to the sum of the above.

A(2) If directly connected to the IESO-controlled grid, kWh pertains to a metering installation on the secondary or low voltage side of the transformer at the interface with the transmission grid. This corresponds to the "Without Losses" kWh value provided by the IESO's MV-WEB. It is the <u>lower</u> of the two kWh values provided by MV-WEB.

If fully embedded with the host distributor, kWh pertains to a metering installation on the secondary or low voltage side of the transformer at the interface between the embedded distributor and the host distributor. For example, if the host distributor is Hydro One Networks Inc., kWh from the Hydro One Networks' invoice corresponding to "Total kWh" should be reported. This corresponds to the <u>lower</u> of the two kWh values provided in Hydro One Networks' invoice.

If partially embedded, kWh pertains to the sum of the above.

Additionally, kWh pertaining to distributed generation directly connected to the distributor's own distribution network should be included in **A(2)**.

- B If a Large Use Customer is metered on the secondary or low voltage side of the transformer, the default loss is 1% B = 1.01 X E).
- **D** kWh corresponding to D should equal metered or estimated kWh at the customer's delivery point.

G and **I** These loss factors pertain to secondary-metered customers with demand less than 5,000 kW.

H If directly connected to the IESO-controlled grid, SFLF = 1.0045.

If fully embedded within a host distributor, SFLF = loss factor re losses in transformer at grid interface X loss factor re losses in host distributor's system. If the host distributor is Hydro One Networks Inc., SFLF = 1.0060 X 1.0278 = 1.0340. If partially embedded, SFLF should be calculated as the weighted average of above.

Distributors that wish to propose a different SFLF should provide appropriate justification for any such proposal including supporting calculations and any other relevant material.

2013					-		\$ -
2014					-		-
2015					-		\$ -
2016					-		\$ -
2017	(1)				-		-

Notes:

(1) For 2017, please indicate whether the amounts provided are on a forecast or actual basis.

Some distributors have transferred the cost of stranded meters from Account 1860 - Meters to "Sub-account Stranded Meter Costs of Account 1555", while in some cases distributors have left these costs in Account 1860. Depending on which treatment the applicant has chosen. please provide the information under either of the two scenarios (A and B below), as applicable.

Scenario A: If the stranded meter costs were transferred to "Sub-account Stranded Meter Costs" of Account 1555, the above table should be completed and the following information should be provided in Exhibit 9.

- A description of the accounting treatment followed by the applicant on stranded meter costs for financial accounting and reporting purposes.
- The amount of the pooled residual net book value of the removed from service stranded meters, less any contributed capital (net of accumulated amortization), and less any net proceeds from sales, which were transferred to this subaccount as of December 31, 2010.
- A statement as to whether or not, since transferring the removed stranded meter costs to the sub-account, the recording of depreciation expenses was continued in order to reduce the net book value through accumulated depreciation. If so, the total depreciation expense amount for the period from the time the costs for the stranded meters were transferred to the sub-account to December 31, 2010 should be provided.

If no depreciation expenses were recorded to reduce the net book value of stranded meter costs through accumulated depreciation, the total depreciation expense amount that would have been applicable from the time that the stranded meter costs were transferred to the sub-account of Account 1555 to December 31, 2010 should be provided. In addition, the following information should be provided:

- a) Whether or not carrying charges were recorded for the stranded meter cost balances in the sub-account, and if so, the total carrying charges recorded to December 31, 2010.
- b) The estimated amount of the pooled residual net book value of the removed from service meters, less any net proceeds from sales and contributed capital, at the time when the smart meters will have been fully deployed (e.g., as of December 31, 2010). If the smart meters have been fully deployed, the actual amount should be provided.

 A description as to how the applicant intends to recover in rates the remaining costs for stranded meters, including the proposed accounting treatment, the proposed disposition period, and the associated bill impacts. **Scenario B:** If the stranded meter costs remained recorded in Account 1860, the above table should be completed and the following information should be provided in Exhibit 9:

- A description of the accounting treatment followed by the applicant on stranded meter costs for financial accounting and reporting purposes.
- The amount of the pooled residual net book value of the removed from service stranded meters, less any contributed capital (net of accumulated amortization), and less any net proceeds from sales, as of December 31, 2010.
- A statement as to whether or not the recording of depreciation expenses continued in order to reduce the net book value through accumulated depreciation. If so, provision of the total (cumulative) depreciation expense for the period from the time that the meters became stranded to December 31, 2010.
- If no depreciation expenses were recorded to reduce the net book value of stranded meters through accumulated depreciation, the total (cumulative) depreciation expense amount that would have been applicable for the period from the time that the meters became stranded to December 31, 2010.
- The estimated amount of the pooled residual net book value of the removed from service meters, less any net proceeds from sales and contributed capital, at the time when smart meters will have been fully deployed. If the smart meters have been fully deployed, please provide the actual amount.
- A description as to how the applicant intends to recover in rates the costs for stranded meters, including the proposed accounting treatment, the proposed disposition period and the associated bill impacts.

Distributors should also provide the Net Book Value per class of meter as of December 31, 2010 as well as the number of meters that were removed / stranded. In preparing this information, distributors should review the Board's letter of January 16, 2007 Stranded Meter Costs Related to the Installation of Smart Meters which stated that records were to be kept of the type and number of each meter to support the stranded meter costs.
