Inflation or not , we simply can't afford more increases in our utilities. We have been getting ongoing rate increases in customer, delivery and hydro without reprieve and all the taxes as well. The majority of us have seen 0 wage increases and have had and continue to have consecutive wage freezes without getting anything at all for inflation. Where do you expect the money to come from. Its time for us all to say enough is enough and utilities should not been tied in anyway to profits or shareholders . We have all had cut backs in our jobs and are doing with less so should Alectra as well as all others
