Subject: Hydro seasonal rate customers

Sir or Ms:

Regarding Seasonal Rate Hydro One customers. I have a concern when a group of customers rate is changed so that a certain part of that group may pay more while others pay less. It is always the rural customers that end up paying more. The reasoning being that the delivery costs are more for those customers. Yet it is those same rural customers that live in the shadow of Nuclear, Wind and other Power Generation sites, Transmission, Distribution Stations and Lines and have had their property values significantly degraded because of these sites. There has been no compensation to these customers for this. Now again they will be paying more under this change. It is not a fair plan. And fairness is more complicated than it seems.
