ONTARIO ENERGY BOARD

***IN THE MATTER OF*** the Ontario Energy Board Act, 1998,  
C. S.O. 1998, c.15 (Sched. B);

**AND IN THE MATTER OF** an Application by EPCOR Electricity Distribution Ontario Inc. for an Order or Orders pursuant to Section 78 of the *Ontario Energy Board Act, 1998* approving or fixing just and reasonable rates and other service charges for the distribution of electricity

## Application

- The applicant is EPCOR Electricity Distribution Ontario Inc. (“EPCOR”), an electricity distribution company owned by EPCOR Utilities Inc., based out of Edmonton, Alberta. In decision and order EB-2017-0373/0374, the Ontario Energy Board approved the sale of the shares of Collus PowerStream Corp. to EPCOR Utilities Inc. with the sale formally closing on October 1, 2018. For the purpose of this application, the LDC is referred to as “EPCOR” consistently. The corporation remains the same corporate entity before and after the sale of its shares, with the only change being an amendment to the name.
- EPCOR serves approximately 17,500 mostly residential and commercial electricity customers in the Towns of Collingwood, Stayner, Creemore and the village of Thornbury. EPCOR, an Ontario corporation with operations centre located in Collingwood, Ontario, carries on the business of owning and operating electricity distribution facilities under Electricity Distribution License ED-2002-0518.
- EPCOR hereby applies to the Ontario Energy Board (the “Board” or the “OEB”), pursuant to section 78 of the Ontario Energy Board Act, 1998 as amended (the “OEB Act”) for an Order or Orders approving its proposed electricity distribution rates and other charges, effective May 1, 2020.
- EPCOR last appeared before the OEB with a cost of service rebasing application for 2013 rates in the EB-2012-0116 proceeding. As stated in decision and order

1 EB-2017-0373/0374, a deferral of the rate rebasing period has been extended for  
2 five years from the date of closing of the proposed transactions.

3

4 • EPCOR is seeking approval for electricity distribution rates using the OEB's 2020  
5 IRM Rate Generator Model. EPCOR confirms that it has worked with OEB staff  
6 to request any adjustments to prepopulated values, and that the billing  
7 determinants in the models as filed are accurate, with exceptions as noted in this  
8 application.

9

10 • EPCOR requests that, pursuant to Section 34.01 of the OEB's *Rules of Practice*  
11 *and Procedure*, this proceeding be conducted by way of written hearing.

12

13 • The persons affected by this Application are the ratepayers of EPCOR's service  
14 territory.

15

16 • The Applicant confirms that the application and related documents will be  
17 published on its website ([EPCOR.com](http://EPCOR.com)). The application will also be available for  
18 public review at our office located at 43 Stewart Road, Collingwood Ontario and  
19 will provide a copy for anyone requesting the material.

20

21 • EPCOR is proposing that notices related to this Application appear in the  
22 *Collingwood Connection* newspaper. The *Collingwood Connection* is an unpaid  
23 local publication with an average circulation of approximately 12,000 per week. It  
24 is also available online at <https://www.simcoe.com/collingwood-on/>

## 1. Introduction

EPCOR has selected the Price Cap Incentive Rate-setting (“Price Cap IR”) option to file its 2019 Distribution Rate Application. In preparing this Application, EPCOR has complied with Chapter 3, Incentive Rate Setting Applications, of the Board’s Filing Requirements for Distribution Rate Applications – 2019 Edition for 2020 Rate Applications, dated July 15, 2019 (the “Filing Requirements”).

All rates referenced in this Application and included in the accompanying 2020 Proposed Tariff of Rates and Charges are based on the output of the OEB’s 2020 IRM Rate Generator Model, as posted on the OEB website August 8, 2019 (the “2020 IRM Model” or the “Model”).

The application includes a completed *Lost Revenue Adjustment Mechanism Variance Account (LRAMVA) Work Form – Version 4.0*, as posted by the OEB on July 15, 2019 for the disposition of the 1568 balances for the years 2017-2018 and a completed “*STS-Tax Change*” worksheet in the *2020 IRM Rate Generator model* for the sharing of the impact of legislated tax changes.

On March 28, 2019, EPCOR received a final OEB Decision and Rate Order for rates effective May 1, 2019 (EB 2018-0025).

For greater clarity, EPCOR has not included in this Application any claims, changes, requests or proposals in relation to any of the following items:

- Z-factor claims
- Advanced Capital Module
- Incremental Capital Module
- Eligible Investments

## 2. Summary of Application

EPCOR's current rates, effective May 1, 2019, were approved by the Board in its Decision dated March 28, 2019 on EPCOR's 2019 4<sup>th</sup> GIRM Application (EB-2018-0025).

This included, as a condition of the share purchase agreement, a residential rate rider (credit) was approved and added as of October 1, 2018 as referenced in decision and rate order EB-2017-0373 AND EB-2017-0374.

EPCOR is submitting a 4th GIRM Application for rates effective May 1, 2020.

EPCOR requests an Order or Orders approving:

1. Monthly Service Charge and Distribution Volumetric rates adjusted by the Board's price cap formula effective May 1, 2020;
2. A rate rider for Disposition of Group 1 Accounts;
3. A rate rider for Disposition of Lost Revenue Adjustment Mechanism Variance Account (LRAMVA);
4. A rate rider with respect to the tax change amount from the impact of the legislated tax changes to be shared 50/50 between shareholders and ratepayers;
5. Updated Retail Transmission Service rates effective May 1, 2020;
6. An order declaring EPCOR's current (i.e. 2019) rates as interim rates effective May 1, 2020, and a rider that would allow for the recovery of any foregone incremental revenue between May 1, 2020 and the effective date of the Board's Rate Order if and only if the preceding approvals cannot be issued in time to implement final rates, effective May 1, 2020; and
7. Final disposition on 2017 interim approved balances.

### 3. Price Cap Adjustment

The rates and tariffs entered in the Rate Generator Model are taken from the Board-approved 2019 Tariff of Rates and Charges, as per the Board Rate Order (EB-2018-0025) dated March 2, 2019 and attached to this Application as Appendix E.

EPCOR has the following rate classes:

- Residential
- General Service Less Than 50 kW
- General Service 50 to 4,999 kW
- Unmetered Scattered Load
- Street Lighting

Since rebasing took place in 2013, EPCOR has one significant industrial customer who has now exceeded the General Service 50 to 4,999 kW consumption. An updated rate class will be included in the next Cost of Service, expected to be filed in October 2023. For the purposes of this application, this customer continues to be included in the General Service 50 to 4,999 kW class.

In addition, EPCOR has one customer who is operating as a Wholesale Market Participant (WMP) in its service territory. This WMP is classified as a General Service 50 to 4,999 kW customer. EPCOR does not invoice this customer for the Wholesale Market Service Charge, Power or Global Adjustment and as a result, is not subject to certain rate riders for the disposition of Group 1 variance accounts.

The Price Cap index of 1.35% is calculated in the Board's Rate Generator model, based on the preliminary 4<sup>th</sup> GIRM parameters. This is determined using an inflation factor of 1.50%, a productivity factor of 0.00%, and offset by a stretch factor of 0.15% (Cohort II) based on the updated benchmarking study for use for rates effective in 2020. These values are expected to be revised with final factors before a decision and order is issued, which could impact rate calculations.

1 **Off-Ramps and Return on Equity**

2 Section 3.3.5 of the Filing Requirements states:

3 “For each of the OEB’s three rate-setting options, a regulatory review may be triggered if  
4 a distributor’s earnings are outside of a dead band of +/- 300 basis points from the OEB  
5 approved return on equity. The OEB monitors results filed by distributors as part of their  
6 reporting and record-keeping requirements and determines if a regulatory review is  
7 warranted. Any such review will be prospective, and could result in modifications,  
8 termination or the continuation of the respective Price Cap IR or Annual IR Index plan for  
9 that distributor”.

10 EPCOR’s current distribution rates were rebased and approved by the OEB in 2013 and  
11 included and expected (deemed) regulatory rate of return of 8.98%. The actual return on  
12 equity for 2018 was 11.94% which remains inside the OEB’s designated dead band.

13 **Table 11: ROE Summary**

Year	Approved ROE	Achieved ROE	Over (Under) Earned
2013	8.98%	<b>8.40%</b>	-0.58%
2014	8.98%	<b>11.21%</b>	2.23%
2015	8.98%	<b>10.86%</b>	1.88%
2016	8.98%	<b>10.03%</b>	1.05%
2017	8.98%	<b>11.65%</b>	2.67%
2018	8.98%	<b>11.94%</b>	2.96%

## 4. Tax Changes

The Board's 4<sup>th</sup> GIRM Supplemental Report determined that a 50/50 sharing of the impact of currently known legislated tax changes, as applied to the tax level reflected in the Board-approved base rates for a distributor, is appropriate. The tax costs to be shared in 2020 are related to the income tax rate changes as shown on Schedule 8 – "*STS-Tax Change*" in the 2020 IRM Model.

At the time of filing this Application, the legislated tax rates for 2020 are changed from the tax rates which underpin the current distribution rates with respect to the availability of the Small Business Deduction which increases the tax rate. The additional tax cost is \$65,617 as calculated by the Board's rate model. Under the Board's guidelines any tax savings or cost is shared 50% - 50% with ratepayers resulting in an amount of \$32,808 to be recovered from customers through the following the tax change rate riders:

- \$0.11 per customer for Residential
- \$0.0001 per kWh for General Service less than 50 kW
- \$0.0192 per kW for General Service greater than 50kW
- \$0.0001 per kWh for Unmetered Scattered Load
- \$0.3277 per kW for Street lighting

EPCOR recognizes that should further legislated tax changes for 2019 occur during the course of this proceeding, the tax change calculation may be updated and rate riders updated as part of the draft Rate Order process.

## **5. Lost Revenue Adjustment Mechanism Variance Account (“LRAMVA”)**

In the *Guidelines for Electricity Distributor Conservation and Demand Management* (EB-2012-0003) (the “CDM Guidelines”), the Board approved the generic variance account, Account 1568 – LRAM Variance Account. This account was created in relation to the CDM programs for the 4-year period January 1, 2011 to December 31, 2014, in recognition of the new CDM targets assigned to distributors.

Distributors are required to calculate the variance between the actual CDM savings achieved and the level of CDM savings assumed in the setting of their rates. The variance in the CDM savings is to be calculated for each customer class and the approved rates applied to determine a dollar amount. These amounts are to be recorded in Account 1568 and reported in the annual trial balance filed under electricity Reporting and Record-keeping Requirements (“RRR”) section 2.1.7.

EPCOR had new cost of service (“COS”) rates approved for 2013. This was the first COS filing where the load forecast incorporated the anticipated CDM savings related to the new CDM targets assigned to distributors.

In IRM submission EB-2018-0025, EPCOR was approved to dispose of 2016 balances.

EPCOR has calculated the LRAMVA for 2017 and 2018 based on the Board’s revised guidance as published on the addendum to filing requirements for Electricity Distribution Rate Applications, issued July 15, 2019. This includes a change to the data source used (Participation and Cost reports) as the IESO is no longer provided a workbook of annualized verified results to LDC’s due to the conclusion of the Conservation First Framework. To calculate net savings values at the project level, EPCOR used results from the IESO’s 2017 program evaluation (e.g., net-to-gross values and gross realization rates).

EPCOR’s disposition is calculated using version 4 of the LRAMVA work form.

The amounts booked are summarized in Table 5.1 below.

**Table 5.1: LRAMVA Disposition**

3 The forecast in the original Cost of Service application was calculated based on expected  
4 savings prorated by class based on consumption. The actual results reveal savings above  
5 forecast in the Residential, GS<50, GS>50 and Streetlight classes.

6 Section 13.4 of the CDM Guidelines provides that “At a minimum, distributors must apply  
7 for disposition of the balance in the LRAMVA the time of their Cost of Service rate  
8 applications. Distributors may apply for the disposition of the balance in the LRAMVA on  
9 an annual basis, as part of their Incentive Regulation Mechanism rate applications, if the  
10 balance is deemed significant by the applicant.” EPCOR is making a request for  
11 disposition of the December 31, 2018 ending principal balance of \$281,346 plus carrying  
12 charges of \$15,842 (for a total of \$297,188) over 12 months as part of this application.

## 6. Retail Transmission Service Rates

EPCOR has adjusted its Retail Transmission Service Rates (RTSR) to recover the wholesale transmission costs that it will be charging. EPCOR used the Board's 2020 RTSR worksheets included in the 2020 IRM Rate Generator model and followed the direction in the Board's *Guideline: Electricity Distribution Retail Transmission Service Rates, G-2008-0001, Revision 4.0, June 28, 2012*.

EPCOR is billed for transmission costs for all delivery points by Hydro One Networks Inc. (HONI) and has entered HONI's approved rates into the model (as of July 1, 2019). EPCOR has assumed no change in the wholesale transmission rates that it will be charged for 2020, but customers will see an increase in this portion of their bill as a result of the HONI increase. Residential customers can expect a monthly increase of approximately \$0.80 as a result.

EPCOR anticipates that information regarding 2019 wholesale transmission rates will be available and that the RTSR Model will be updated with 2019 wholesale rates at the time of the draft Rate Order filing. All of EPCOR's transmission costs are invoiced from HONI.

EPCOR has determined the 2018 wholesale quantities billed. The 2018 wholesale quantities and the 2019 approved wholesale rates were used to calculate the estimated wholesale transmission costs for 2019 and for 2020.

## 7. Deferral and Variance Accounts

On July 31, 2009 the Board issued its Report on *Electricity Distributors' Deferral and Variance Account Review Initiative (EDDVAR)*. The EDDVAR Report sets out the policy framework for the review and disposition of deferral and variance accounts ("DVA") for electricity distributors. As part of this framework, the Board has decided to review certain deferral and variance accounts within a distributor's IRM application.

EPCOR has entered the data for the Group 1 Accounts into the appropriate schedules of the IRM Rate Generator model (Appendix C). Table 7.1 below summarizes the Group 1 Account balances as at December 31, 2018, as per the model. EPCOR has reviewed and can confirm that the prepopulated billing determinants are correct.

**Table 7.1: Summary of the Group 1 Account Balances  
at December 31, 2018**

Account Description	Account	Amount	Interest	Total Claim
LV Variance Account	1550	\$396,703	\$17,721	\$414,424
Smart Metering Entity Charge Variance Account	1551	(18,685)	(820)	(19,505)

<b>Total Group 1 Balance</b>		<b>\$332,465</b>	<b>\$18,922</b>	<b>\$351,387</b>
Threshold Test (Total claim per kWh)				<b>\$0.0011</b>

As shown in Table 7.1, the threshold of \$0.0010 per kWh debit or (credit) has been exceeded and as a result, EPCOR has requested disposition of Group 1 balances over a twelve month period.

#### **Cost of Power Reconciliation and Continuity Schedule Adjustments**

As per section 3.2.5, of the filing requirements, distributors must provide an explanation if the account balances on Tab 3. Continuity Schedule of the rate generator model differ from the account balances in the trial balance reported through the RRR and the audited financial statements and which have been reflected in the prepopulated rate generator model. Furthermore, as per section 3.2.5.3, of the filing requirements, effective May 23, 2017, per the OEB's letter titled Guidance on Disposition of Accounts 1588 and 1589, applicants must reflect RPP Settlement true-up claims pertaining to the period that is being requested for disposition in the RSVA Power (Account 1588) and RSVA GA (Account 1589) variance accounts. A principal adjustment of \$116,480 was included in account 1588 - RSVA - Power which was comprised of the amounts in the table below:

**Table 7.2: 2018 1588 - RSVA Power Principal Adjustments**

A detailed explanation of the changes in the unbilled revenue process has been included in section 8. Global Adjustment of this summary.

## 8. Global Adjustment (“GA”)

EPCOR completes and files the “Regulated Price Plan vs. Market Price – Variance for Conventional Meters” and Regulated Price Plan vs Market Price – Variance for Smart Meters” data submissions with the Independent Electricity System Operator (“IESO”) by the fourth business day of each month as required.

EPCOR uses the IESO’s 1<sup>st</sup> GA estimate to bill its customers, which is applicable to all customer classes except for Class A.

The IESO data submission is filed using the 2<sup>nd</sup> monthly estimate of the GA.

A) The “Regulated Price Plan vs. Market Price – Variance for Conventional Meters” submission is completed by downloading the consumption information for the month from our settlement provider by each individual interval metered RPP tiered pricing customer and summarizing the data.

B) The “Regulated Price Plan vs Market Price – Variance for Smart Meters” submission is completed by downloading the consumption information for the month from our settlement provider for the following calculation:

- Total System Load
- Less Non-RPP Interval Metered Customers
- Less Streetlighting
- Less Non-Designated Loads
  - Non-interval metered spot rate customers
  - Retail customers: settlement information for the current month is not available for retail customers so billed information for the month from the billing system is used as an estimate.

When EPCOR receives the IESO invoice on the tenth business day of the month, the actual class B GA charged to EPCOR is reconciled and trued up to the estimate as filed. The calculated difference is then entered as an adjustment in the following month’s data submission (1<sup>st</sup> True-Up).

1 Line 148 of the IESO invoice “Class B Global Adjustment Settlement Amount” is allocated  
2 in a percentage split to account “4705 Power Purchased” and “4707 Charges – Global  
3 Adjustment” based on a comprehensive excel work form which summarizes all the above  
4 noted consumption data. The split allocates the class B GA charged by the IESO to the  
5 RPP and Non-RPP customers as follows, using A and B as defined on the previous page.

6 Power Purchased: (RPP)  $(A + B) / \text{Total System Load}$

7 Charges GA: (Non-RPP)  $\text{Total System Load} - (A + B) / \text{Total System Load}$

8 EPCOR bills its customers on a cyclical basis. EPCOR has the following billing cycles;

- 9 • Residential, General Service Less than 50 kW and Unmetered Scattered Load,  
10 the cycles below are billed on a non-calendar monthly basis
- 11 ○ 4 cycles for Collingwood, 1 cycle billed each week
  - 12 ○ 1 cycle for Stayner, billed every four weeks in conjunction with one
  - 13 Collingwood cycle
  - 14 ○ 1 cycle for Creemore, billed every four weeks in conjunction with one
  - 15 Collingwood cycle
  - 16 ○ 1 cycle for Thornbury, billed every four weeks in conjunction with one
  - 17 Collingwood cycle
- 18 • General Service greater than 50 kW and Streetlighting
- 19 ○ 1 cycle billed on a calendar month

20 EPCOR receives the GA calculations for each Class B non-RPP customer from Utilismart  
21 who provides EPCOR with Settlement Services. The Class B GA is imported into the  
22 billing system daily to align with consumption.

23 For billing purposes, EPCOR uses the following GA calculation for non-RPP customers;

- 24 • Residential and General Service less than 50 kW are billed a weighted average  
25 GA of the 1<sup>st</sup> monthly GA estimate based on the number of days in each month of  
26 the billing cycle
- 27 • General Service greater than 50 kW are billed the 1<sup>st</sup> monthly GA estimate

1 EPCOR records unbilled revenue in the accounting system monthly and reverses it in the  
2 subsequent month. Unbilled energy revenue is based on an assessment of electricity  
3 distribution services supplied to customers between the date of the last meter reading and  
4 the period ending date. The components of a customer's most recent bill are divided by  
5 the number of days in the billing period. Then the estimated daily revenue is multiplied by  
6 the remaining days to month-end.

7 Prior to December 2018, the estimation technique was not used for the final month of the  
8 year. Instead, the monthly unbilled amounts for December were recorded based on actual  
9 consumption. The billing system was set-up for a rate change on January 1 with no actual  
10 change to the rates occurring. This allowed the billing system to split bills processed in  
11 January and February of the subsequent year between revenue earned before and after  
12 December 31<sup>st</sup>. Therefore, exactly correct unbilled consumption and dollars was posted  
13 for the year.

14 However, effective December 31, 2018 this technique could no longer be used for year-  
15 end cut-off accuracy. The estimation technique has been used for December 2018, just  
16 like all the other months of the year. EPCOR can no longer wait for subsequent year-end  
17 actual billing information to come in during January and February because of a much  
18 quicker year-end close set by the new parent company. A comparison of the accrual for  
19 unbilled revenue verses the actual billings subsequent to year-end is completed to assess  
20 the accuracy of the process.

21 EPCOR is currently investigating a technique to use actual smart meter data for the  
22 unbilled revenue accrual in the future to improve accuracy.

23 As of December 31, 2016, EPCOR only had one Class A GA customer. Due to the  
24 expansion of the IESO Industrial Conservation Initiative (ICI), the number of customers  
25 has increased to five as of July 1, 2017. The global adjustment for Class A customers is  
26 billed using line 147 of the IESO invoice allocated based on each customer's contribution  
27 to the total peak demand factor.

28 In order to true up RPP estimates, EPCOR completes a reconciliation process based on  
29 actual billed amounts by RPP category (TOU and Tiered Pricing Class). An export of the  
30 verified billing data is downloaded and categorized in a spreadsheet based on  
31 consumption period. This data is compared with originally submitted estimates (explained

1 above) and variances are posted via the RPP settlement process as well as adjustments  
2 to GA/Power Allocations.

3 EPCOR completes the IESO's Embedded Generation Information submission, which  
4 provides the total kWh generated as well as the total billed to its five Class A customers.

#### 5 **Global Adjustment Work Form & Reconciliation**

6 As part of this application, EPCOR is requesting to dispose of its RSVA – Global  
7 Adjustment account. A requirement for disposition is the completion of the GA Analysis  
8 Work form to reconcile balances between what was billed to ratepayers and what was  
9 charged to the IESO within a variance tolerance of 1%. 2019\_0027\_GA Analysis  
10 Workform - 2018 Disposal has been included as part of this application.

11 As reported in the 2018 Annual RRR, EPCOR Non-RPP Class B customers consumed  
12 87.27 MWh, which results in a 93.45 MWh loss adjusted value. The variance between the  
13 Global Adjustment billed and the Global Adjustment charged was expected to (\$157,846).  
14 The Net Change in Principal Balance in the GL was \$71,667. The following reconciliation  
15 items have been included in the GA Analysis Work form:

16 **Table 8.1 - Global Adjustment Analysis Reconciliation Items**

Item	Amount
<b>Net Change in Principal Balance in the GL</b>	\$71,667.14
True-up of GA Charges based on Actual Non-RPP Volumes - prior year	(\$32,288.96)
True-up of GA Charges based on Actual Non-RPP Volumes - current year	(\$356,186.57)
Add current year end unbilled to actual revenue differences	\$208,593.76
Differences in GA IESO posted rate and rate charged on IESO invoice	(\$45,941.51)
GA Accrual vs. Actual	\$19,922.07
<b>Adjusted Net Change in Principal Balance in the GL</b>	\$ (134,234)
<b>Net Change in Expected GA Balance in the Year Per Analysis</b>	<u>\$ (157,846)</u>
<b>Unresolved Difference</b>	\$ 23,612
<b>Unresolved Difference as % of Expected GA Payments to IESO</b>	0.3%

17

18

19

1 After removal of these reconciliation items, an unresolved difference of \$23,612 remains  
2 which results in Unresolved Difference as % of Expected GA Payments to IESO of 0.3%  
3 which is within the expected tolerance levels.

4 EPCOR is currently planning on transitioning to a calendar month billing process for all  
5 customers, effective January 2020 in order to better serve customers and manage  
6 variances.

## **9. OEB Accounting Guidance**

On February 21, 2019, the OEB issued its letter entitled Accounting Guidance related to Accounts 1588 Power, and 1589 RSVA Global Adjustment as well as the related accounting guidance. The accounting guidance is effective January 1, 2019 and is to be implemented by August 31, 2019. Distributors are expected to consider the accounting guidance in the context of historical balances that have yet to be disposed on a final basis (including the 2018 balances that may be requested for disposition in this rate application). In this application, distributors are to provide a status update on the implementation of the new accounting guidance, a review of historical balances, results of the review, and any adjustments made to account balances.

On March 30, 2017, EPCOR received a final OEB Decision and Rate Order for Rates effective May 1, 2017 which included a requirement in its next rate application to file the results of a special purpose audit of the balances in its RSVA - Power and RSVA – GA accounts, in compliance with the OEB's instructions as set out in the Decision. As a result of the special purpose audit, EPCOR spent extensive time reviewing and validating its process for both the IESO RPP settlement as well as the final reconciliation process. This resulted in the implementation of processes that are well aligned with the OEB accounting guidance.

During the course of 2019, EPCOR has been working with the OEB illustrative model to ensure that its reconciliation processes were aligned with the OEB's guidance. Results from 2017 & 2018 were recalculated to determine if a material variance exists. EPCOR determined materiality of 0.5% of the annual Cost of Power threshold as per the OEB's Guidance, Q&A's for Accounting Guidance on Accounts 1588 and 1589.

### **Initial Settlement**

EPCOR currently uses a methodology consistent with the OEB guidance. Preliminary settlement is completed using best available estimates (using actual meter data) against the weighted average cost of power and the second global adjustment estimate.

## 1 First True-up

2 The first true-up is completed using the actual invoiced Global Adjustment (not  
3 necessarily the same as the posted IESO rate) and the variance submitted to the IESO  
4 the following month. This process is consistent with the OEB accounting guidance.

## 5 Second True-up

6 EPCOR's reconciliation process historically involved taking the actual billed RPP  
7 consumption, compared with the preliminary IESO settlement and recalculating the RPP  
8 variance. In addition, the Global Adjustment/Power allocation would be revised and an  
9 adjustment would be posted in the quarter following the settlement period. The  
10 adjustment would be calculated using billed consumption as a percentage of the IESO  
11 invoiced volumes.

12 The OEB guidance varies slightly from this process and as a result, EPCOR has revised  
13 the methodology accordingly in 2019. Instead of using the actual billed amounts as the  
14 numerator of the GA/Power allocation, billed RPP consumption is calculated as a  
15 percentage of total billed consumption and that percentage is applied to actual  
16 wholesale volumes. Table 9.1 demonstrates the theory behind the change in calculation

17 **Table 9.1 Second True-Up Methodology Illustration**

kWh	Historical	OEB Guidance
Wholesale Volume	100,000	100,000
Actual RPP Invoiced	55,000	55,000
Non-RPP Invoiced		<u>40,000</u>
Total Billed		95,000
Final RPP	55,000	57,895
Power Allocation	55%	58%
GA Allocation	45%	42%

18  
19  
20 Due to this change, 2017 & 2018 results were recalculated. The adjustment resulted in  
21 immaterial variances. These variances are highlighted on Table 9.2.

In 2018-0025, EPCOR received approval to dispose of the 2017 Group 1 accounts through interim rate riders as calculated over a 12 months basis:

***Findings***

*The OEB approves the disposition of a debit balance of \$423,677 as of December 31, 2017, including interest projected to April 30, 2019 for Group 1 accounts on an interim basis.*

Based on the information included above, EPCOR is requesting to receive final approval on the disposition of these balances without any modifications to the interim balance amounts.

## 10. Rate Change Summary and Bill Impacts

Appendix A shows the proposed Tariff of Rates and Charges, incorporating the effect of the 2018 price cap adjustment and updated transmission rates.

Appendix B shows the resulting bill impacts, as calculated by the Board's Rate Generator model.

In 2019, pursuant to EB-2012-0410 EPCOR finalized the transition process towards fully fixed residential distribution rates (effective May 1, 2019). Over a four year period, distribution rates have transformed from a calculation composed of both fixed & variable components to being fully fixed.

**Table 10.1 Residential Rate Design**

Rates Effective	Fixed Component	Variable Component
May-15	42.5%	57.5%
May-16	56.9%	43.1%
May-17	71.3%	28.7%
May-18	85.6%	14.4%
May-19	100.0%	0.0%

### Bill Impacts for EPCOR Customers:

- A typical Residential customer using 750 kWh per month will see a decrease of \$0.11 (-0.33%) in the distribution component of their bill. The total delivery component will increase by \$0.69 (1.68%) due to the expected increase in RTSR charges. The total monthly bill is expected to increase by \$0.73 (0.7%).
- A typical General Service less than 50 kW demand customer using 2,000 kWh per month will see a decrease of \$0.31 (0.4%) in the distribution component of their bill. The total delivery component will increase by \$1.62 (1.8%) due to the expected increase in RTSR charges. The total monthly bill is expected to increase by \$1.70 (0.6%).
- Class B General Service 50 to 4,999 kW demand customers (using 250 kW demand and consuming 86,000 kWh per month) will see a decrease of \$521.81 (-

1 28.3%) in the distribution component of their bill. The total delivery component will  
2 decrease by \$430.51 (-15.3%). The total monthly bill is expected to decrease by  
3 \$486.48 (-3.2%).

- 4 • A Street lighting customer (using 100 kW demand and consuming 15,000 kWh per  
5 month with 1,000 connections) will see an increase of \$2,353.03 (40.7%) in the  
6 total delivery component. The total monthly bill is expected to increase by  
7 \$2,658.92 (29.9%). The main driver for this increase is due to the disposition of  
8 the LRAMVA balance which included multiple large street lighting conservation  
9 projects.

10 **Table 10.2: Customer Bill Impacts per Rate Class**

RATE CLASS	Usage Base	Average Bill 2019	Average Bill 2020	Total Bill Impact	
		\$	\$	\$	%
Residential (RPP)	750 kWh	\$ 111.82	\$ 112.55	\$ 0.73	0.7%
GS<50kW	2000 kWh	\$ 276.74	\$ 278.44	\$ 1.70	0.6%
GS>50kW	250 kW	\$ 14,997.27	\$ 14,510.80	\$ (486.48)	-3.2%
USL	150 kWh	\$ 26.92	\$ 26.10	\$ (0.83)	-3.1%

2019-0027

### RESIDENTIAL SERVICE CLASSIFICATION

This classification refers to an account taking electricity at 750 volts or less where the electricity is used exclusively in a separate metered living accommodation. Customers shall be residing in single-dwelling units that consist of a detached house or one unit of a semi-detached, duplex, triplex or quadruplex house, with a residential zoning.

Separately metered dwellings within a town house complex or apartment building also qualify as residential customers. Class B consumers are defined in accordance with O. Reg. 429/04. Further servicing details are available in the distributor's Conditions of Service.

### APPLICATION

The application of these rates and charges shall be in accordance with the Licence of the Distributor and any Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, which may be applicable to the administration of this schedule.

No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, or as specified herein.

Unless specifically noted, this schedule does not contain any charges for the electricity commodity, be it under the Regulated Price Plan, a contract with a retailer or the wholesale market price, as applicable. In addition, the charges in the MONTHLY RATES AND CHARGES - Regulatory Component of this schedule do not apply to a customer that is an embedded wholesale market participant.

It should be noted that this schedule does not list any charges, assessments, or credits that are required by law to be invoiced by a distributor and that are not subject to Ontario Energy Board approval, such as the Global Adjustment and the HST.

### GENERAL SERVICE LESS THAN 50 KW SERVICE CLASSIFICATION

This classification applies to a non residential account taking electricity at 750 volts or less whose average monthly maximum demand is less than, or is forecast to be less than, 50 kW. Class B consumers are defined in accordance with O. Reg. 429/04. Further servicing details are available in the distributor's Conditions of Service.

#### APPLICATION

The application of these rates and charges shall be in accordance with the Licence of the Distributor and any Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, which may be applicable to the administration of this schedule.

No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, or as specified herein.

### GENERAL SERVICE 50 TO 4,999 KW SERVICE CLASSIFICATION

This classification applies to a non residential account whose average monthly maximum demand used for billing purposes is equal to or greater than, or is forecast to be equal to or greater than, 50 kW but less than 5,000 kW. Class A and Class B consumers are defined in accordance with O. Reg. 429/04. Further servicing details are available in the distributor's Conditions of Service.

#### APPLICATION

The application of these rates and charges shall be in accordance with the Licence of the Distributor and any Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, which may be applicable to the administration of this schedule.

No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, or as specified herein.

Unless specifically noted, this schedule does not contain any charges for the electricity commodity, be it under the Regulated Price Plan, a contract with a retailer or the wholesale market price, as applicable. In addition, the charges in the MONTHLY RATES AND CHARGES - Regulatory Component of this schedule do not apply to a customer that is an embedded wholesale market participant.

If included in the following listing of monthly rates and charges, the rate rider for the disposition of WMS - Sub-account CBR Class B is not applicable to wholesale market participants (WMP), customers that transitioned between Class A and Class B during the variance account accumulation period, or to customers that were in Class A for the entire period. Customers who transitioned are to be charged or refunded their share of the variance disposed through customer specific billing adjustments. This rate rider is to be consistently applied for the entire period to the sunset date of the rate rider. In addition, this rate rider is applicable to all new Class B customers.

If included in the following listing of monthly rates and charges, the rate rider for the disposition of Global Adjustment is only applicable to non-RPP Class B customers. It is not applicable to WMP, customers that transitioned between Class A and Class B during the variance account accumulation period, or to customers that were in Class A for the entire period. Customers who transitioned are to be charged or refunded their share of the variance disposed through customer specific billing adjustments. This rate rider is to be consistently applied for the entire period to the sunset date of the rate rider. In addition, this rate rider is applicable to all new non-RPP Class B customers.

It should be noted that this schedule does not list any charges, assessments, or credits that are required by law to be invoiced by a distributor and that are not subject to the Ontario Energy Board approval, such as the Global Adjustment and the HST.

### UNMETERED SCATTERED LOAD SERVICE CLASSIFICATION

This classification applies to an account taking electricity at 750 volts or less whose average monthly maximum demand is less than, or is forecast to be less than, 50 kW and the consumption is unmetered. Such connections include cable TV power packs, bus shelters, telephone booths, traffic lights, railway crossings, etc. The level of the consumption will be agreed to by the distributor and the customer, based on detailed manufacturer information/ documentation with regard to electrical consumption of the unmetered load or periodic monitoring of actual consumption. Class B consumers are defined in accordance with O. Reg. 429/04. Further servicing details are available in the distributor's Conditions of Service.

# **Appendix B – Bill Impacts Summary**

**Board File Number EB-2019-0027**

## Incentive Rate-setting Mechanism Rate Generator for 2020 Filers

The bill comparisons below must be provided for typical customers and consumption levels. Bill impacts must be provided for residential customers consuming 750 kWh per month and general service customers consuming 2,000 kWh per month and having a monthly demand of less than 50 kW. Include bill comparisons for Non-RPP (retailer) as well. **To assess the combined effects of the shift to fixed rates and other bill impacts associated with changes in the cost of distribution service, applicants are to include a total bill impact for a residential customer at the distributor's 10th consumption percentile (In other words, 10% of a distributor's residential customers consume at or less than this level of consumption on a monthly basis). Refer to section 3.2.3 of the Chapter 3 Filing Requirements For Electricity Distribution Rate Applications.**

For certain classes where one or more customers have unique consumption and demand patterns and which may be significantly impacted by the proposed rate changes, the distributor must show a typical comparison, and provide an explanation.

**Note:**

1. For those classes that are not eligible for the RPP price, the weighted average price including Class B GA through end of May 2018 of \$0.1117/kWh (IESO's Monthly Market Report for May 2018, page 22) has been used to represent the cost of power. For those classes on a retailer contract, applicants should enter the contract price (plus GA) for a more accurate estimate. Changes to the cost of power can be made directly on the bill impact table for the specific class.

2. Please enter the applicable billing determinant (e.g. number of connections or devices) to be applied to the monthly service charge for unmetered rate classes in column N. If the monthly service charge is applied on a per customer basis, enter the number "1". Distributors should provide the number of connections or devices reflective of a typical customer in each class.

Note that cells with the highlighted color shown to the left indicate quantities that are loss adjusted.

## Incentive Rate-setting Mechanism Rate Generator for 2020 Filers

Data on this worksheet has been populated using your most recent RRR filing.

If you have identified any issues, please contact the OEB.

Have you confirmed the accuracy of the data below?

Yes

If a distributor uses the actual GA price to bill non-RPP Class B customers for an entire rate class, it must exclude these customers from the allocation of the GA balance and the calculation of the resulting rate riders. These rate classes are not to be charged/refunded the general GA rate rider as they did not contribute to the GA balance.

Please contact the OEB to make adjustments to the IRM rate generator for this situation.

Total Claim (including Account 1568)

\$648,575

Total Claim for Threshold Test (All Group 1 Accounts)

\$351,387

Threshold Test (Total claim per kWh)<sup>2</sup>

\$0.0011

Currently, the threshold test has been met and the default is that Group 1 account balances will be disposed. If you are requesting not to dispose of the Group 1 account balances, please select NO and provide detailed reasons in the manager's summary.

YES

<sup>1</sup> Residual Account balance to be allocated to rate classes in proportion to the recovery share as established when rate riders were implemented.

<sup>2</sup> The Threshold Test does not include the amount in 1568.

<sup>3</sup> The proportion of customers for the Residential and GS<50 Classes will be used to allocate Account 1551.

1a The year Account 1589 GA was last disposed

2017

1b The year Account 1580 CBR Class B was last disposed

2017

Note that the sub-account was established in 2015.

2a Did you have any customers who transitioned between Class A and Class B (transition customers) during the period the Account 1589 GA balance accumulated (i.e. from the year after the balance was last disposed to the current year requested for disposition)?

No

(e.g. If you received approval to dispose of the GA variance account balance as at December 31, 2015, the period the GA variance accumulated would be 2016 to 2018.)

2b Did you have any customers who transitioned between Class A and Class B (transition customers) during the period the Account 1580, sub-account CBR Class B balance accumulated (i.e. from the year after the balance was last disposed to the current year requested for disposition)?

No

(e.g. If you received approval to dispose of the CBR Class B balance as at December 31, 2016, the period the CBR Class B variance accumulated would be 2017 to 2018.)

3b Enter the number of rate classes in which there were customers who were Class A for the full year during the period the Account 1589 GA or Account 1580 CBR B balance accumulated. Enter the total Class A consumption in the rate class in the table

# Incentive Rate-setting Mechanism Rate Generator for 2020 Filers

The purpose of this tab is to calculate the GA rate riders for all current Class B customers who did not transition between Class A and B in the period since the Account 1589 GA was last disposed. Calculations in this tab will be modified upon completion of tab 6.1a, which allocates a portion of the GA balance to transition customers, if applicable. Effective January 2017, the billing determinant and all rate riders for the disposition of GA balances will be calculated on an energy basis (kWhs) regardless of the billing determinant used for distribution rates for the particular class (see Chapter 3, Filing Requirements, section 3.2.5.2)

If the allocated Account 1580 sub-account CBR Class B amount does not produce a rate rider in one or more rate class (except for the Standby rate class), the model will transfer the entire CBR Class B amount into Account 1580 WMS control account to be disposed through the general purpose Group 1 DVA rate riders.

<sup>1</sup> When calculating the revenue reconciliation for distributors with Class A customers, the balances of sub-account 1580-CBR Class B will not be taken into consideration if there are Class A customers since the rate riders, if any, are calculated separately.

<sup>2</sup> Only for rate classes with WMP customers are the Deferral/Variance Account Rate Riders for Non-WMP (column H and J) calculated separately. For all rate classes without WMP customers, balances in account 1580 and 1588 are included in column G and disposed through a combined Deferral/Variance Account and Rate Rider.

#### Notes

1. Regarding the small business deduction, if applicable,
  - a. If taxable capital exceeds \$15 million, the small business rate will not be applicable.
  - b. If taxable capital is below \$10 million, the small business rate would be applicable.
  - c. If taxable capital is between \$10 million and \$15 million, the appropriate small business rate will be calculated.

2. The OEB's proxy for taxable capital is rate base.

In the green shaded cells, enter billing detail for wholesale transmission for the same reporting period as the billing determinants on Tab 10. For Hydro One Sub-transmission Rates, if you are charged a combined Line and Transformer connection rate, please ensure that both the Line Connection and Transformation Connection columns are completed.

If any of the Hydro One Sub-transmission rates (column E, I and M) are highlighted in red, please double check the billing data entered in "Units Billed" and "Amount" columns. The highlighted rates do not match the Hydro One Sub-transmission rates approved for that time period. If data has been entered correctly, please provide explanation for the discrepancy in rates.

Please provide the LRAMVA threshold approved in the cost of service (COS) application, which is used as the comparator against actual savings in the period of the LRAMVA claim. The LRAMVA threshold should generally be consistent with the annualized savings targets developed from Appendix 2-1. If a manual update is required to reflect a different allocation of forecast savings that was approved by the OEB, please note the changes and provide rationale for the change in Tab 1-a.

## LRAMVA Work Form: Distribution Rates

Table 3. Inputs for Distribution Rates and Adjustments by Rate Class

Please complete Table 3 with the rate class specific distribution rates that pertain to the years of the LRAMVA disposition. Any adjustments that affect distribution rates can be incorporated in the calculation by expanding the "plus" button at the left hand bar. Table 3 will convert the distribution rates to a calendar year rate (January to December) based on the number of months entered in row 16 of each rate year starting from January to the start of the LDC's rate year. Please enter 0 in row 16, if the rate year begins on January 1. If there are additional adjustments (i.e., rows) added to Table 3, please adjust the formulas in Table 3-a accordingly.

### LDC Persistence Savings Results

**Legend**

User Inputs (Green)

Drop Down List (Blue)

Instructions (Grey)

**Instructions  
(Steps)**

- Columns B to H of this tab have been structured in a way to match the formatting of the persistence report provided by the IESO. Please copy and paste the program information by initiative in Columns B to H.
- Please identify the source of the report via the dropdown list in Column I.
- To facilitate the identification of adjustments that may be available in a prospective year's results report, it will be easier to sort all the savings by implementation year (Column H). This can be done by clicking on the arrow in the header of Column H.
- Please identify what the savings value represents (i.e., current year savings for the year or an adjustment to a prior year) via the dropdown list in Column J. Current year savings would be identified with an 'A'.
- Please manually input or link the applicable savings and adjustments (Columns L to BT) for all applicable initiatives in Tabs 4 and 5 of this work form.

**NOTE: The Net Verified Peak Demand Savings table and Net Verified Energy Savings table below are in the reverse order to the accompanying tables in Tab 4 and Tab 5. The tables below match the data in the accompanying tables.**

### RESIDENTIAL SERVICE CLASSIFICATION

This classification refers to an account taking electricity at 750 volts or less where the electricity is used exclusively in a separate metered living accommodation. Customers shall be residing in single-dwelling units that consist of a detached house or one unit of a semi-detached, duplex, triplex or quadruplex house, with a residential zoning.

Separately metered dwellings within a town house complex or apartment building also qualify as residential customers. Class B consumers are defined in accordance with O. Reg. 429/04. Further servicing details are available in the distributor's Conditions of Service.

### APPLICATION

The application of these rates and charges shall be in accordance with the Licence of the Distributor and any Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, which may be applicable to the administration of this schedule.

No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, or as specified herein.

Unless specifically noted, this schedule does not contain any charges for the electricity commodity, be it under the Regulated Price Plan, a contract with a retailer or the wholesale market price, as applicable. In addition, the charges in the MONTHLY RATES AND CHARGES - Regulatory Component of this schedule do not apply to a customer that is an embedded wholesale market participant.

It should be noted that this schedule does not list any charges, assessments, or credits that are required by law to be invoiced by a distributor and that are not subject to Ontario Energy Board approval, such as the Global Adjustment and the HST.

### RETAIL SERVICE CHARGES (if applicable)

The application of these rates and charges shall be in accordance with the Licence of the Distributor and any Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, which may be applicable to the administration of this schedule.

No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, or as specified herein.

Unless specifically noted, this schedule does not contain any charges for the electricity commodity, be it under the Regulated Price Plan, a contract with a retailer or the wholesale market price, as applicable.

It should be noted that this schedule does not list any charges, assessments, or credits that are required by law to be invoiced by a distributor and that are not subject to the Ontario Energy Board approval, such as the Global Adjustment and the HST.

Retail Service Charges refer to services provided by a distributor to retailers or customers related to the supply of competitive electricity.

One-time charge, per retailer, to establish the service agreement between the distributor and the retailer	\$	100.00
Monthly Fixed Charge, per retailer	\$	40.00
Monthly Variable Charge, per customer, per retailer	\$/cust.	1.00
Distributor-consolidated billing monthly charge, per customer, per retailer	\$/cust.	0.60
Retailer-consolidated billing monthly credit, per customer, per retailer	\$/cust.	(0.60)
Service Transaction Requests (STR)		
Request fee, per request, applied to the requesting party	\$	0.50
Processing fee, per request, applied to the requesting party	\$	1.00
Request for customer information as outlined in Section 10.6.3 and Chapter 11 of the Retail Settlement Code directly to retailers and customers, if not delivered electronically through the Electronic Business Transaction (EBT) system, applied to the requesting party		
Up to twice a year	\$	no charge
More than twice a year, per request (plus incremental delivery costs)	\$	4.00
Notice of switch letter charge, per letter (unless the distributor has opted out of applying the charge as per the Ontario Energy Board's Decision and Order EB-2015-0304, issued on February 14, 2019)	\$	2.00

### LOSS FACTORS

If the distributor is not capable of prorating changed loss factors jointly with distribution rates, the revised loss factors will be implemented upon the first subsequent billing for each billing cycle.

Total Loss Factor - Secondary Metered Customer < 5,000 kW	1.0710
Total Loss Factor - Primary Metered Customer < 5,000 kW	1.0603

### Appendix A GA Methodology Description Questions on Accounts 1588 & 1589<sup>1</sup>

11. Please complete the Table below for principal adjustments on the DVA Continuity Schedule for Account 1588:

#### Reconciliation of Account 1588 - 2018

	Principal Adjustments	Was the amount a "Principal Adjustment" in the previous year? (Y/N)
<b>Balance December 31, 2018</b>	-369,380	
<b>Reversals of Principal Adjustments - previous year</b>		
1. Reversal of Cost of Power accrual from previous year		
2. Reversal of CT 1142 true-up from the previous year	-99,572	Y
3. Unbilled to billed adjustment for previous year		
4. Reversal of RPP vs. Non-RPP allocation	32,289	Y
<b>Sub-Total Reversals from previous year (A):</b>	-67,283	
<b>Principal Adjustments - current year</b>		
5. Cost of power accrual for 2018 vs Actual per IESO bill	36,438	N
6. True-up of CT 1142 for 2018 consumption recorded in 2019 GL	-36,304	N
7. Unbilled accrued vs. billed for 2018 consumption	-172,558	N
8. True-up of RPP vs. Non-RPP allocation of CT 148 based on actual 2018 consumption	356,187	N
9. Other		
<b>Sub-Total Principal Adjustments for 2018 consumption (B)</b>	183,763	
<b>Total Principal Adjustments shown for 2018 (A + B)</b>	116,480	
<b>Bal. For Disposition - 1588 (should match Total Claim column on DVA Continuity Schedule)</b>	-252,900	

<sup>1</sup>In all references in the questions relating to amounts booked to accounts 1588 and 1589, amounts are not booked directly to accounts USoA 1588 and 1589 relating to power purchase transactions, but are rather booked to the cost of power USoA 4705 Power Purchased, and 4707, Charges – Global Adjustment, respectively. However, accounts 1588 and 1589 are impacted the same way as account 4705 and 4707 are for cost of power transactions.

## INSTRUCTIONS FOR COMPLETING GA ANALYSIS WORKFORM

11. In booking expense journal entries for Charge Type (CT) 1142 and CT 148 from the IESO invoice, please confirm which of the following approaches is used:
- CT 1142 is booked into Account 1588. CT 148 is pro-rated based on RPP/non-RPP consumption and then booked into Account 1588 and 1589 respectively.
  - CT 148 is booked into Account 1589. The portion of CT 1142 equaling RPP minus HOEP for RPP consumption is booked into Account 1588. The portion of CT 1142 equaling GA RPP is credited into Account 1589.
  - If another approach is used, please explain in detail.
  - Was the approach described in response to the above questions used consistently for all years for which variances are proposed for disposition? If not, please discuss.

EPCOR confirms that approach (a.) is used to book electricity costs. Charge Type CT 1142 is booked into Account 1588 and CT 148 is pro-rated based on RPP/non-RPP consumption and booked into Account 1588 and 1589 respectively. This approach has been used consistently for the variances proposed for disposition.

### 12. Questions on CT 1142

- Please describe how the initial RPP related GA is determined for settlement forms submitted by day 4 after the month-end (resulting in CT 1142 on the IESO invoice).

The IESO data submission is filed using the 2<sup>nd</sup> monthly estimate of the GA.

A) The “Regulated Price Plan vs. Market Price – Variance for Conventional Meters” submission is completed by downloading the consumption information for the month from our settlement provider by each individual interval metered RPP tiered pricing customer and summarizing the data.

B) The “Regulated Price Plan vs Market Price – Variance for Smart Meters” submission is completed by downloading the consumption information for the month from our settlement provider for the following calculation:

- Total System Load
- Less Non-RPP Interval Metered Customers
- Less Street lighting
- Less Non-Designated Loads
  - Non-interval metered spot rate customers

## INSTRUCTIONS FOR COMPLETING GA ANALYSIS WORKFORM

- Retail customers: settlement information for the current month is not available for retail customers so billed information for the month from the billing system is used as an estimate.

In order to calculate the RPP vs. Market Price Variance (resulting in CT 1142 on the IESO invoice), the variance is calculated between the projected RPP amounts paid by customers and the expected costs of power (Net System Load weighted average price plus the anticipated global adjustment costs calculated on the 2nd monthly estimate).

- b. Please describe the process for truing up CT 1142 to actual RPP kWh, including which data is used for each TOU/Tier 1&2 prices, as well as the timing of the true up.

For the year 2018, in order to true up RPP estimates, EPCOR completes a quarterly reconciliation process based on actual billed amounts by RPP category (TOU and Tiered Pricing Class). An export of the verified billing data is downloaded and categorized in a workbook based on consumption period (pro-rated by number of days when a billing period covers more than one month). This data is compared with originally submitted estimates (explained above) and variances are posted via the RPP settlement process as well as adjustments to GA/Power Allocations.

The true up is completed and posted in the final month of the following quarter after all of the billing data has been finalized for the appropriate period.

This process is being adjusted due to the new OEB accounting guidance.

- c. Has CT 1142 been trued up for with the IESO for all of 2018?

EPCOR confirms CT1142 has been trued up with the IESO for all of 2018.

- d. Which months from 2018 were trued up in 2019?

Q4 2018 was trued up in 2019.

## INSTRUCTIONS FOR COMPLETING GA ANALYSIS WORKFORM

- i. Were these true ups recorded in the 2018 or 2019 balance in the General Ledger?

EPCOR confirms that these balances were recorded in 2019.

- e. Have all of the 2018 related true-up been reflected in the applicant's DVA Continuity Schedule in this proceeding?

EPCOR confirms that all 2018 true-up amounts have been reflected in the DVA continuity schedule.

### 13. Questions on CT 148

- a. Please describe the process for the initial recording of CT 148 in the accounts (i.e. 1588 and 1589).

The IESO data submission is filed using the 2<sup>nd</sup> monthly estimate of the GA.

A) The "Regulated Price Plan vs. Market Price – Variance for Conventional Meters" submission is completed by downloading the consumption information for the month from our settlement provider by each individual interval metered RPP tiered pricing customer and summarizing the data.

B) The "Regulated Price Plan vs Market Price – Variance for Smart Meters" submission is completed by downloading the consumption information for the month from our settlement provider for the following calculation:

- Total System Load
- Less Non-RPP Interval Metered Customers
- Less Street lighting
- Less Non-Designated Loads
  - Non-interval metered spot rate customers
  - Retail customers: settlement information for the current month is not available for retail customers so billed information for the month from the billing system is used as an estimate.

CT 148 of the IESO invoice "Class B Global Adjustment Settlement Amount" is allocated in a percentage split to account "4705 Power Purchased" and "4707 Charges – Global Adjustment" based on a comprehensive excel work form which summarizes all

## INSTRUCTIONS FOR COMPLETING GA ANALYSIS WORKFORM

the above noted consumption data. The split allocates the class B GA charged by the IESO to the RPP and Non-RPP customers as follows, using A and B as previously in this document (page 16).

- b. Please describe the process for true up of the GA related cost to ensure that the amounts reflected in Account 1588 are related to RPP GA costs and amounts in 1589 are related to only non-RPP GA costs.

When EPCOR receives the IESO invoice on the tenth business day of the month, the actual class B GA charged (CT 148) to EPCOR is reconciled and trued up to the estimate as filed. The calculated difference is then entered as an adjustment in the following month's data submission.

- c. What data is used to determine the non-RPP kWh volume that is multiplied with the actual GA per kWh rate (based on CT 148) for recording as the initial GA expense in Account 1589?

A) The "Regulated Price Plan vs. Market Price – Variance for Conventional Meters" submission is completed by downloading the consumption information for the month from our settlement provider by each individual interval metered RPP tiered pricing customer and summarizing the data.

B) The "Regulated Price Plan vs Market Price – Variance for Smart Meters" submission is completed by downloading the consumption information for the month from our settlement provider for the following calculation:

- Total System Load
- Less Non-RPP Interval Metered Customers
- Less Street lighting
- Less Non-Designated Loads
  - Non-interval metered spot rate customers
  - Retail customers: settlement information for the current month is not available for retail customers so billed information for the month from the billing system is used as an estimate.

## INSTRUCTIONS FOR COMPLETING GA ANALYSIS WORKFORM

Line 148 of the IESO invoice “Class B Global Adjustment Settlement Amount” is allocated in a percentage split to account “4705 Power Purchased” and “4707 Charges – Global Adjustment” based on a comprehensive excel work form which summarizes all the above noted consumption data. The split allocates the class B GA charged by the IESO to the RPP and Non-RPP customers as follows, using A and B as defined on the previous page.

- d. Does the utility true up the initial recording of CT 148 in Accounts 1588 and 1589 based on estimated RPP/non-RPP consumption proportions to actuals based on actual RPP-non-RPP consumption proportions?

Yes. This update is completed as part of the quarterly reconciliation process.

- e. Please indicate which months from 2018 were trued up in 2019 for CT 148 proportions between RPP and non-RPP

Q4 2018 was trued up in 2019.

- f. Were these true ups recorded in the 2018 or 2019 balance in the General Ledger?

EPCOR confirms that these balances were recorded in 2019.

- g. Are all true-ups for 2018 consumption reflected in the DVA Continuity Schedule?

EPCOR confirms that all 2018 true-up amounts have been reflected in the DVA continuity schedule.

### 14. Questions regarding principal adjustments and reversals on the DVA Continuity Schedule:

#### Questions on Principal Adjustments - Accounts 1588 and 1589

- a. Did the applicant have principal adjustments in its 2019 rate proceeding which were approved for disposition?

## INSTRUCTIONS FOR COMPLETING GA ANALYSIS WORKFORM

EPCOR confirms that it did have principal adjustments in 2019 approved for disposition.

- b. If yes, please provide a break-down of the total amount of principal adjustments that were approved (e.g. true-up of unbilled, true up of CT 1142, true up of CT 148 etc.) for each of Accounts 1588 and 1589.

		CT148	CT1142	Total
RSVA - Power	1588	224,501	99,572	324,072
RSVA - Global Adjustment	1589	(224,501)	0	(224,501)

CT148 - adjustment for GA/Power allocation of RPP reconciliation related to 2017 posted in 2018.

CT1142 - adjustment for 2017 RPP variance related, posted in 2018.

- c. Has the applicant reversed the adjustment approved in 2019 rates in its current proposed amount for disposition?

The amounts related to 2017 have been reversed in the current proposed amount for disposition

**NB:** only the principal adjustments amounts that were disposed in the previous proceeding should be reversed in this proceeding. For example, if no amount related to unbilled to billed adjustment for 2018 consumption was included in 2019 proceeding, this amount should not be included as a “reversal” from previous year.

- d. Please confirm that the allocation of charge type 148 has been trued up to actual proportion of RPP/non-RPP consumption in the GL.

EPCOR confirms the allocation of charge type 148 has been trued up to actual proportion of RPP/non-RPP consumption in the GL.
