Dear OEB:

Your review should most definitely include:

“i. impacts related to the methods of upstream natural gas extraction (such as hydraulic fracturing) for natural gas that will be transported through the pipeline ii. impacts related to the ultimate downstream consumption of the natural gas transported through the pipeline.”

Please hold a fully transparent oral hearing.

Humanity is rapidly running out of time to transform our economy and redefine our relationship to the land, this means no more business as usual.

There are risks and costs associated with more greenhouse gas pollution. The world’s climate scientists warned in October 2018 that we must cut greenhouse gas emissions at least in half by 2030, and since then the warnings have become more dire. We should not allow the fossil fuel industry to keep pretending as though they can solve our problems--the land and planet can not always be sacrificed for their short term profits.

We have recognized the deep connection between the climate emergency and the fossil fuel industry, making it especially outrageous to allow these companies greater control over the future of our planet.
