EB-2019-0159

Please hold a fully transparent oral hearing. Humanity is rapidly running out of time to transform our economy and redefine our relationship to the land. The further development of the fossil fuel industry introduces additional risks and costs associated with more greenhouse gas pollution.

The world's climate scientists warned in October 2018 that we must cut greenhouse gas emissions at least in half by 2030, and yet the overall emissions are still increasing. The long-term damage to the natural environment and subsequent negative impacts on human civilization must outweigh the short-term profits of the fossil fuel industry.
