Subject: Enbridge pipeline 2021Dawn parkway expansion

I understand the Ontario Energy Board is the decision maker as to whether the Enbridge 2021 Dawn Parkway Expansion will be allowed to run through Ontario.

I am amazed this is even under consideration for 3 reasons.

1.It will be carrying fracked gas from Pennsylvania, this process produces huge amounts of greenhouse gases.

2.The gas itself will be burned creating yet more greenhouse gases.

3.The pipeline will run through the Beverly swamp which is a protected Conservation Area.

It matters not that the emissions will be produced mainly in the U.S. We all feel the effects of climate change.

Is Ontario committed to reducing our carbon footprint or are we just "open for business" at any cost?
