Subject: Climate and pipelines

To whom it may concern:

As a voting citizen of Ontario, I am writing regarding my exasperation at the complete lack of action of your government in the face of our climate emergency. Our future depends on eliminating fossil fuel emissions over the next thirty years. We have children and grandchildren who depend on our decision making capacity and to ACT NOW to save our province, country and planet from an unimaginable and bleak future.

NO to new pipelines. I am particularly adamant about the proposed new Enbridge pipeline in the Beverly Swamp area of Hamilton. It is beyond belief that our precious wetlands are in grave danger of contamination and destruction by adding this extension. We do not need this pipeline. We need to keep fossil fuels in the ground. We need to support renewable energy projects and protect our natural habitats.

Ontario and Canada demand action!

Just check the polls and daily news coverage. Change for a more sustainable future is today the focus of our electorate Please pay attention!

Sincerely,
Kristina Wilson
