Subject: Global heating and fossil fuels

Before any approval of fossil fuel expansion and infrastructure, impact on the future climate and global heating must be factored into the decision. This includes the source and destination. This must be costed against Canada's carbon budget for a liveable planet.

Ontario must not be used as a bypass to transport fossil fuel products around refusing states.

Expansion of dirty polluting energy infrastructure is a losing investment according to Mark Carney and BlackRock. Fossil fuels are described as the "new tobacco" and are in the "death knell" according to Jim Cramer.

Stop this Enbridge Dawn Parkwood expansion through Hamilton.

Thank you.
