Subject: Comments on Enbridge gas pipeline proposal EB-2019-0159

To Ontario Energy Board,

- Increasing natural gas pipeline capacity does not square with Ontario's environment plan which relies on a significant decrease in natural gas emissions to meet its carbon pollution reductions.
 - Fossil fuel project reviews, such as of Enbridge's Dawn-Parkway gas pipeline, must consider the climate impacts of upstream extraction and downstream consumption
 - Pipeline reviews need to assess the economic risks of projects in the face of global commitments to reduce fossil fuel use, especially when Ontario ratepayers subsidize pipeline costs.
 - OEB reviews of energy projects need to consider alternatives like investments in energy efficiency, conservation and renewable energy.
 - Pipeline assessments need to seriously consider impacts to species at risk and ecosystems from construction and leaks. Those ecological studies need to happen before a review is conducted, not after.
 - Hold a fully transparent oral hearing, open to the public. The Enbridge Dawn-Parkway pipeline proposal affects all people living in Ontario
- This is not the time to expand the use of fossil fuels. This the time to invest in renewable energy sources such as solar and wind.
