To Ontario Energy Board,

The damage to the natural environment as it is today, is very vulnerable and at a very high risk that is irreplaceable. By increasing more corporate and private fossil fuels designed for commercial and consumer use can only be described as “destructive” to the Present state of the sensitive environment that is natured to ensure animal life form and to the ecosystems. Profiting off of fossil fuels only leads to destruction as history has proven itself many times over. Extract and refine from the earth then transporting the fuel to an area that has not been disturbed highlighting as a clean way of providing services and energy for public consumption. The emissions only spells disaster after disaster waiting to happen. Most people are lead to believe to have a home you need energy without thought of the product being an invasive species does not register to themselves as being innocent of the crime against nature.
