Subject: OEB needs to consider climate impacts of Enbridge gas pipeline

To Ontario Energy Board,

Increasing natural gas pipeline capacity does not square with Ontario's environment plan which relies on a significant decrease in natural gas emissions to meet its carbon pollution reductions. Fossil fuel project reviews, such as of Enbridge's Dawn-Parkway gas pipeline, must consider the climate impacts of upstream extraction and downstream consumption. OEB reviews of energy projects need to consider alternatives like investments in energy efficiency, conservation and renewable energy. Pipeline assessments need to seriously consider impacts to species at risk and ecosystems from construction and leaks. Those ecological studies should always happen before a review is conducted.
