Subject: Comments on Enbridge gas pipeline proposal EB-2019-0159

To Ontario Energy Board,

Good day:

While we still have a good, fighting chance, of saving our planet, every individual, government, and nation should do whatever they can to stop all kinds of pollution. Increasing natural pipelines will only add to the already dangerous CO2 levels. This not only effects humans, but also puts other species and entire ecosystems at risk. The Enbridge Dawn-Parkway gas pipeline must not be allowed to proceed without a very thorough and transparent environmental assessment by a totally impartial party.

More environmentally friendly and energy efficient solutions **MUST** be found. That is where we should be putting all our energy resources. All Ontarians, and, indeed, the whole planet, is effected by our decisions. I hope that you will **SERIOUSLY** consider better, more environmentally friendly alternatives.
