Subject: My comments on Enbridge gas pipeline proposal EB-2019-0159

To Ontario Energy Board,

Increasing natural gas pipeline capacity is the last thing we want as we pivot from resource extraction to green energy before climate change passes the tipping point. Fracked gas is even worse. We don't need the environment destruction of Enbridge's Dawn-Parkway pipeline. We must have ecological studies and true public consultation, or better yet a clear indication that the people of Ontario want different solutions.
