**E-mail Edition: -** © Consensus Economics Inc. All rights reserved. Under our agreement this publication may not be reproduced (complete or partial), redistributed, stored in a public retrieval system or broadcast to persons other than the email subscriber without the prior written permission of Consensus Economics Inc.

**Survey Date**  
**October 13, 2014**

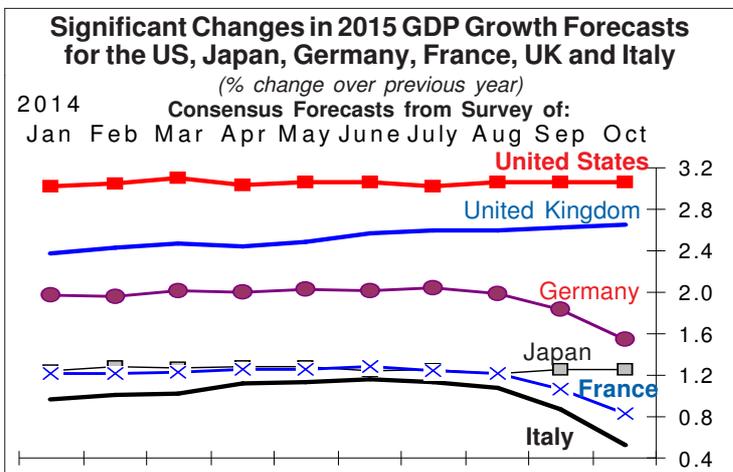

Every month, Consensus Economics surveys over 250 prominent financial and economic forecasters for their estimates of a range of variables including future growth, inflation, interest rates and exchange rates. More than 20 countries are covered and the reference data, together with analysis and polls on topical issues, is rushed to subscribers by express mail and e-mail.

<b>World Economic Activity</b> .....	32

- ◆ **German** industrial output slumped to its lowest level in five years in month-on-month terms, declining by 4% in August. GDP and production forecasts have consequently been slashed for 2014 and 2015, as have official government projections. The GDP outlook for the **Euro zone** has also faltered, despite the ECB's new measures aimed at kick-starting lending. Meanwhile, **France** announced it would delay the reduction of its budget deficit below 3% of GDP until 2017 on the back of weakened GDP prospects. And **oil prices** (see page 27) have fallen sharply on the back of a worsening global demand/supply picture.
- ◆ **Japan** is still working through the impact of April's consumption tax hike. Meanwhile, industrial production shrank by 1.5% (m-o-m) in August. Our panel's GDP forecasts have fallen again.
- ◆ This month's special survey is our regular compilation of **Long-Term Forecasts** (pages 3, 28, and 29) for the next 5-10 years. Moreover, our **Significant Changes** section (page 2) contrasts long-term aggregate forecasts for 2020-2024 with previous aggregates going back to April 1996, allowing for an examination of trends in long-term GDP and inflation expectations.

Our next issue of **Consensus Forecasts** will be available at the end of the day on **November 13, 2014** and will include **Corporate Profits and Real Interest Rates.**

This month, we chart **Significant Changes in Long-Term Forecast Trends for GDP and Inflation for the US, Japan, Germany, France, the UK, Italy and Canada.** Long-term projections for the 6-10 year period average (in this case 2020-2024) are contrasted with those long-term aggregates published all the way back to April 1996. It is this rolling 6-10 year trendline average which we show in the charts below. The 6-10-year trend averages shown in these charts are a measure of changes in potential growth and inflation expectations. This construct has two problems, however. One is that the 6-10 year horizon is a moving target shifting forward one year, each year. The other is that the number of panellists responding to our long-term surveys is smaller and therefore less representative than the numbers responding to our one and two-year surveys on pages 4-24.

In addition to their regular forecasts, country panellists were asked to provide longer-term forecasts covering the period until 2024 for growth in real GDP, consumer spending, investment and industrial production, along with consumer price inflation, current account balances and long-term bond yields. All definitions correspond to those used in the individual country pages.

Six years on from the 2008 global financial crisis, the **G-7 and Western Europe** is still wrestling with the overhang. Output lost an enormous amount of ground, and both the short- and long-term GDP trends have since shifted downward, including our rolling 6-10 year forecasts for the **US, Japan, Germany, France and Italy** (see charts opposite). The continued uncertainty and softness of the long-term GDP outlook could suggest more than just the lingering shadow of the Great Recession. For some, an extended period of low growth and weak demand – from before 2008 in the case of **Japan, Italy and France** – will permanently erode future growth potential as it chases away investment, R&D opportunities and brain capital. Moreover, acute demographic challenges are looming, especially for **Japan and Western Europe**, as the post-war baby-boom generation retires and a smaller working population support them by working for longer and probably by paying more in taxes. Structural reforms (to encourage investment, hiring, new business, bring in additional sources of revenue and, most importantly, to raise competitiveness

and growth rates) are more pressing than ever. However, initial attempts at fiscal consolidation wreaked havoc on the **Euro area** in 2009, 2010 and 2011 (not least with youth unemployment soaring to unprecedented levels in **Italy and Spain**). **European** governments are loathe to embark on another round of fiscal tightening amidst rising joblessness, growing populism and calls for more regulation and less immigration – especially while growth fundamentals remain so fragile and deflationary pressures increase. GDP forecasts for **Japan and Italy** are not expected to raise far above 1.1% over the forecast horizon, while even those for **Germany** are well below 2%. **US** GDP expectations are noticeably higher (only the **UK, Canada, Norway, Spain and Sweden** come close) and are expected to hit 3% in 2016 before eventually easing to 2.4%. This is down from its long-term peak, as the **US** wrestles with the problem of structural unemployment, increasingly large public pension liabilities and the prospect of tighter monetary policy next year.

**Mixed Data Belies Uptick in 2014 GDP Forecast**

Q2 GDP was upgraded yet again from 4.0% (q-o-q annualized) in the advance report to 4.2% in the second release before finally settling on a +4.6% rate. GDP was lifted by a 1.4 percentage point contribution from inventories while business investment was revised up to 9.7% (q-o-q annualized). Personal consumption remained unchanged at an acceptable 2.5% pace, and going into Q3, real spending improved upon July's 0.1% (m-o-m) fall, rising by 0.5% in August. Increases in asset and house values are supporting spending, as are record-low interest rates and a relatively upbeat jobs outlook (at least on the surface). Following August's +142,000 gain, payrolls increased by 248,000 in September, boosted by a 236,000 surge in private business hiring. Total payrolls for the year now stand above 2 million. Meanwhile, unemployment slipped below the 6%-mark to 5.9% last month, prompting another downtick in our panel's 2014 jobless forecast and adding further support to the Fed's decision to unwind QE. On the flip side, hourly earnings were flat m-o-m in September, and job fundamentals remain beset by low wage inflation, structural problems (especially regarding the long-term unemployed), and solid rather than spectacular employment gains.

Industrial production fell by 0.1% (m-o-m) in August which brought the y-o-y rate down from 4.8% in July to a still-robust 4.1%. New factory orders in the same month collapsed by 10.1% (m-o-m) as a result of a plunge in aircraft orders. Elsewhere, the ISM manufacturing index for September slipped and new orders also dropped noticeably, hit by softer global demand and recent US dollar strength. This illustrates the uncertain outlook hanging over 2014, especially as the US (and the world) brace for the normalization of monetary policy.

**Weakness Persists**

April's consumption tax hike (from 5% to 8%) impacted sharply on Q2 GDP. Activity collapsed by a sharper-than-expected annualized 7.1% as consumers and corporates front-loaded their spending in Q1 2014 and industry cut back on output. Since then, there have been hopes that the economy would get back on track. However, Q3 has been mixed at best. Industry has been especially weak. By contrast, consumption appears to be on somewhat firmer footing, judging by solid August retail sales, although real spending declined by 0.3% (m-o-m) and imports fell by 1.5% during the same month. Mining & manufacturing production also recorded a 1.5% (m-o-m) drop in August following a 0.4% advance in July. In y-o-y terms, production experienced a second straight month of contraction, from -0.6% in July to -1.6%, which compares noticeably with the roaring +10.5% y-o-y pace set in January 2014. Even with the yen trading at 6-year lows, this has failed to lift the export-oriented sector and could suggest softening external demand, the shift to offshore production and the yen facing competition from other weak trading currencies. Our panel's GDP and production forecasts have slipped again this month.

Core machinery orders expanded by 4.7% (m-o-m) in August, from 3.5% in July and 8.8% in June, indicating upbeat capital spending. Meanwhile, the September PMI for manufacturing points to a modest slowdown, albeit still in growth territory. However, the Bank of Japan's September Tankan survey showed rising sentiment amongst big manufacturers, from +12 in June to +13. Big firms also expect capital spending in the current fiscal year to rise by 8.6%. The 2014 business spending outlook has dipped but remains firm.

**Growth Forecasts Slashed**

The outlook for the German economy was rocked by news that industrial output had plunged to its lowest levels since 2009 in August. Production shrank by 4% (m-o-m), on the back of a 5.7% (m-o-m) collapse in factory orders. Car output slumped by a massive 25.4% (m-o-m). Furthermore, September's manufacturing PMI descended into contraction territory for the first time in 15 months. German officials quickly played down the bad news, declaring that the slump is partially due to the summer holidays. Still, this has not prevented the government from slashing its GDP forecast for 2014 from 1.8% to 1.2%. Early indications suggest little chance of a bounceback in Q3 after negative growth in Q2, fuelling the prospect of a technical recession. Weak investment is dragging on growth prospects, too, as machinery and equipment spending declined by -0.4% (q-o-q) in Q2. Russia is one of Germany's biggest trading partners, and ongoing sanctions have seen export demand wane, a situation further exacerbated by weakening demand from China and the emerging economies. Exports plummeted by 5.8% (m-o-m) in August following a 4.8% upturn in July. The IMF and ECB have repeated their concerns over Germany's current account and budget surpluses, highlighting the need for expansionary spending measures to advance domestic demand and help boost export demand in neighbouring Euro zone economies.

The labour market is showing signs of optimism. The unemployment rate held steady at 6.7% in August, whilst solid job security and rising real wages should support domestic demand. Inflation was unchanged from August and up 0.8% (y-o-y). It remains at its lowest level for four years.

**Lack of Growth Undermines Deficit Target**

The national accounts showed GDP growth flatlining in Q1 and Q2 in q-o-q terms while the y-o-y rate decelerated from +0.8% in Q1 to +0.1%. Latest data suggest that this weak pattern likely continued into Q3. Manufacturing production fell by 0.2% (m-o-m) in August, following a 0.1% drop in July, on the back of declines in the output of computers & electrical equipment, food & beverages and, unexpectedly, vehicles. The latter contrasts with a 1.3% (m-o-m) rise in auto sales in July. August's disappointing manufacturing release could well be blamed on holiday shutdowns and, compared with the 1.2% (q-o-q) contraction recorded in Q2 as a whole, Q3 output so far looks comparatively higher. However, the sector has been hit by the fiscal squeeze, morose sentiment, and disappointing domestic and export demand. Indeed, manufacturing orders experienced a poor July after June's 1.9% (m-o-m) surge, falling by 1.1% due to a 1.4% decline in external orders. The forward-looking PMI for manufacturing rebounded only moderately in September, from August's low of 46.9 to 48.8. This is still in negative territory and, along with the services PMI slipping from 50.3 to 48.4 in September, underscores the stagnant environment. GDP and production forecasts for 2014 and 2015 have slipped, with a recession in manufacturing now outright expected.

The deteriorating GDP outlook puts the spotlight on the budget deficit. Instead of falling below 3% of GDP by 2015, the deficit is forecast by the government to stay at 4.3% this year and fall to 2.8% only in 2017. Spending cuts of €50bn over the next 3 years have been announced, but the government is ruling out further austerity in light of weak demand and growth, setting the stage for discord with the EU.

**Revisions Show Better-than-expected Growth**

With the UK national accounts changing to ESA 2010, there have been upward revisions to the historical GDP data which have added to an already-upbeat outlook. In Q2 2014, GDP growth edged up to 0.9% (q-o-q), signifying that output growth in the first half of 2014 was more robust than originally thought. Services again contributed positively to growth, rising by 1.1% (q-o-q) in Q2, whilst construction jumped 0.7% (q-o-q). Household consumption has been an integral part of the recovery. A 0.6% advance in Q2 marked the twelfth consecutive positive q-o-q increase, evidence that consumer confidence remains upbeat, boosted by falling unemployment which dropped to 6.4% in Q2 from 6.8% in Q1. On the downside, latest trade figures are a cause for concern. As external demand falters in the Euro zone (the UK's biggest trading partner), reliance on domestic consumer spending has been vital. Deteriorating economic conditions within the Euro area indicate a prolonged slump. The UK's current account deficit has widened, increasing to -5.2% of GDP, up from -4.7% in Q1. Our consensus estimates strong GDP growth of 3.1% this year, though, followed by 2.6% in 2015.

Robust housing activity continued in August as average UK house prices rose by 11.7% (y-o-y), the same rate of increase as in July. Recent surveys suggest that prices may cool, as a combination of low wage growth and sky-high prices hold back sales. Meanwhile, tighter mortgage controls and a potential interest rate rise from the Bank of England in 2015 may put the brakes on three years of soaring prices.

**Please note: we have changed the unemployment variable we cover. Instead of the Claimant Count, we now survey for the Labour Force Survey rate.**

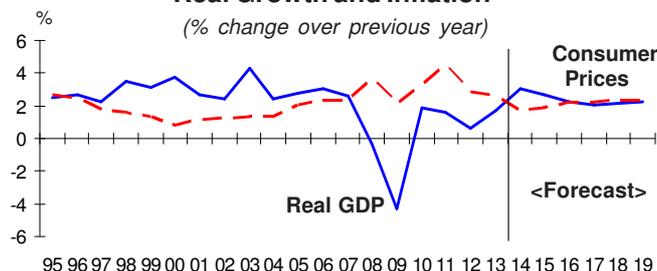

**UK Official Bank Rate – Oct. 13, 2014 = 0.50%**

**GDP Forecasts Downgraded Again**

The Italian economy continues to struggle in its pursuit of a recovery. Our panel has lowered its 2014 GDP forecast to -0.3% from -0.1% in September. Italy relies on the export market to carry economic growth, but the near-term outlook for the external sector is poor, worsened by geopolitical factors and faltering activity in the Euro zone. In July, exports were down by 1.6% (m-o-m). Reforms to the labour market and justice system have been extremely slow to materialise and Prime Minister Renzi faces stiff opposition to their implementation, including the threat of strike action from unions and other groups fatigued by fiscal austerity. Easing rigid labour laws are seen as an important step in enabling job creation in the years to come and encouraging foreign investment. All this would eventually improve the unemployment rate which reached 12.3% in August. Meanwhile, the rate of those aged 15-24 who are out of work rose to 44.2% in the same month. Household consumption remains stagnant amid continued uncertainty about labour market fundamentals. Elsewhere, industrial production dropped by 1% (m-o-m) in July, reaching its lowest level this year. Construction continued on its downtrend, too, falling by 2.4% (m-o-m) and -10.2% (y-o-y). The outlook is increasingly subdued.

Persistently low inflation is worsening Italy's growing debt burden. Consumer prices were estimated at -0.3% (m-o-m) in September as Euro zone inflation weakened to a five-year low. Italy's debt problems are compounded by limited policy instruments as part of the single currency union. New ECB stimulus intervention starts this month, but weak confidence and uncertainty over government policies suggests that these Euro area efforts may not be enough for Italy's needs.

**Direction of Trade – 2013**

**Stable Outlook**

Output-based GDP was flat in July after six straight gains. This suggests a soft start to Q3 after a resurgent 0.8% (q-o-q) showing in Q2 GDP growth. The monthly y-o-y rate slowed from 3.1% in June to 2.5%. The economy was reined in by the goods-producing industries: while services advanced by 0.2% (m-o-m), goods production saw a fall of the same magnitude. Commodities can be volatile, and this was the case in July. Output in agriculture, forestry, fishing & hunting fell by 2.4% (m-o-m) while mining, quarrying, oil & gas extraction dropped by 1.5%, partly as payback for a strong 1.8% showing in June. Utilities contracted by 2.3% on the back of cooler-than-usual weather in July. By contrast, manufacturing made a strong 1% (m-o-m) contribution, thanks to auto output (as evidenced by the 1.6% monthly jump in durables manufacturing). However, industrial production fell by 0.3% after a 0.7% jump in June, mainly from a 2% monthly drop in energy. This, coupled with a weak August performance in exports (-2.5% m-o-m following a 1.3% rise in July, which subsequently pulled the trade balance back into deficit), has raised concerns over activity in the second half of this year.

Still, observers suggest that July's tepid GDP showing may well be a one-off. For one thing, manufacturing sales during that month rose by 2.5% (m-o-m), compared with a 0.9% increase in June, while new orders soared by 4.3%. Many point to the US's relatively robust performance as indication that export demand will support Canadian momentum. Indeed, upbeat auto activity underscores the strong trade links between Canada and the US. GDP and industrial production forecasts are unchanged, but the Bank of Canada is still expected to remain on hold for the foreseeable future.

**Lack of Growth Sparks Stimulus Debate**

Concerns over industry and deflation – and, therefore, the possibility of recession – mark this month’s outlook. Despite a 1.2% (m-o-m) gain in retail sales in August and signs that unemployment is gradually easing, the 2014 consumption forecast remains at 0.7% on the back of weak inflation. The headline CPI rose by only 0.3% (m-o-m) in September while the y-o-y rate was at 0.4%. The ECB plans to buy private sector assets in order to stimulate lending, but more action is needed if prices continue to fall. Meanwhile, German production collapsed by 4.0% (m-o-m) in August, accentuating concerns over the Euro area’s largest economy. The IMF has urged Germany to reduce its budget surplus in order to help support growth, not just at home but in the region as a whole.

**Euro Zone Interest Rates**

Forecasts are provided by a total of more than 80 panelists for **Germany** (page 9), **France** (page 11), **Italy** (page 15), the **Netherlands** (page 20) and **Spain** (page 22). This allows the analysis of forecasts for different yields on individual country 10-year benchmark bonds. Forecasts for 3-month interest rates are all for the EURIBOR rate.

<b>Consensus Mean Average:</b>	0.06%	0.06%	0.06%	0.05%
<b>Mode (most frequent forecast):</b>	0.05%	0.05%	0.05%	0.05%

**Euro Exchange Rates**

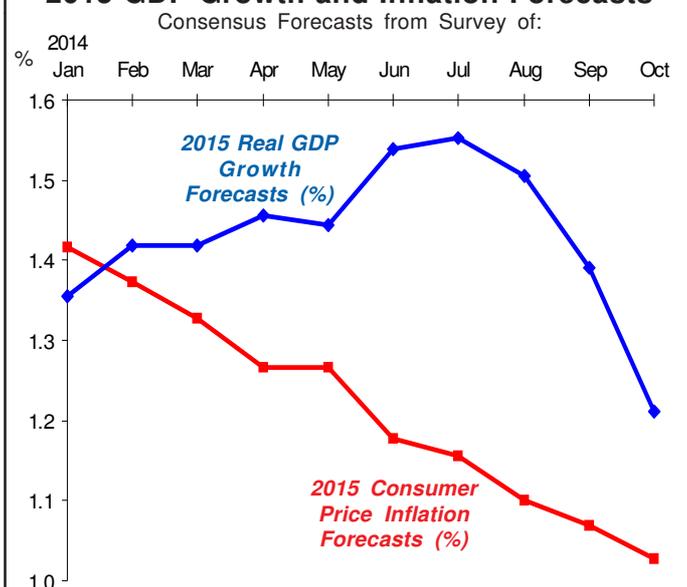

Consensus forecasts from a survey of approximately 100 panellists are shown on page 27.

**Euro Zone Economic Statistics**

The source of all Historical Data (facing page) is **Eurostat**, with the exception of the Current Account and the Money Supply, M3, which are from the **European Central Bank**. The base years and statistics methodologies used by Eurostat may differ from those used by individual Euro zone-member countries included in *Consensus Forecasts*. Eurostat data is often drawn from the national statistical agencies within the Euro zone but is adjusted to achieve standard classifications.

◆ Revised figures show that the Dutch economy performed better than expected in Q2, advancing by 0.7% (q-o-q), the upward adjustment based on improved household consumption and fixed capital formation. A 0.5% (y-o-y) progression in consumption in July points towards a marginal lift in consumer confidence. Nevertheless, the consensus predicts a third straight year of contraction in private consumption.

◆ Exports of goods were buoyant in July, surging 4.1% (y-o-y). Much of this increase arose from re-exports, as exports of Dutch products remained muted.

Household consumption of goods bounced back in August, elevated by 1.5% (m-o-m) after July's 1.7% fall. Big contributions came from increased purchases of vehicles, whilst retail sales shot up by 0.6% (m-o-m). The proposed implementation of tax cuts to counter a potential slowdown in the economy (largely due to lower oil prices and investment) should facilitate domestic growth. Prime Minister Erna Solberg has also announced greater spending of oil revenues.

Interest rates are expected to be unchanged until late in 2015, despite CPI rising 0.5% (m-o-m) in September.

So far this year, Spain has been one of the better-performing economies in the Euro zone. Prospects for Q3 growth look promising, with booming retail sales of 2.8% (m-o-m) in August indicating that household consumption will continue to support GDP. Industrial production rose 0.2% (m-o-m) in August after July's modest 0.1% increase, hinting at a fourth straight q-o-q improvement.

The unemployment rate remains a drag on the economy at 24.5%, at more than twice the average of the Euro area. Consumer prices are still a concern, easing to -0.2% (y-o-y) in September.

◆ The short-term stability of the Swedish economy has been placed into question after the ruling centre-right Prime Minister Fredrik Reinfeldt was ousted from power in the September election. GDP is still estimated to expand 2.1% this year, after confirmation of a 0.7% (q-o-q) gain in Q2. Further improvement in household consumption saw a 0.9% (m-o-m) advance in August, raising confidence of a solid Q3 figure to follow the Q2 jump of 1.3% (q-o-q).

◆ Deflation fears worsened as consumer prices hit -0.2% (y-o-y) in August, influencing the Central Bank to keep the benchmark interest rate unchanged at 0.25%.

After Q2's disappointing GDP performance, the outlook for Q3 appears similarly subdued. Manufacturing expanded at its slowest pace in 17 months in September, while the PMI fell sharply to 50.4, from 52.9 in August. Geopolitical tensions in Europe are weighing heavily on the export market, generating shrinking orders and job losses.

Despite prices rising by 0.1% (m-o-m) in September, the CPI fell into negative territory at -0.1% (y-o-y) for the first time in 7 months. It dragged on lower import costs and oil prices. The SNB remains focused on defending its currency cap against the euro to maintain competitiveness.

**Brent and WTI Plunge to New Lows**

Oil prices have fallen sharply on the back of slowing global growth. Brent and West Texas Intermediate (WTI) stood at US\$90.65 and US\$90.33 per barrel on October 6 (their closest point in four years), and by October 13 had dropped even further, to US\$89.88 and US\$85.73, respectively. Prices for the European and US benchmarks diverged in late 2010 on the back of markedly different supply dynamics. Now, though, the threat of looming recession and a deflationary environment in the Euro zone is pre-occupying policymakers. Concerns over activity, not just in Europe, but also in Japan, China and Latin America, underpin the drop in prices. Interestingly, key OPEC member Saudi Arabia has suggested that it could live with lower oil prices for now, while Kuwait has indicated a potential price floor of US\$76.

Regional totals and the grand total for GDP growth and inflation, are weighted averages calculated using **2013 GDP weights, converted at average 2013 exchange rates**. Current account forecasts given in national currencies on pages 7-24 have been converted using consensus exchange rate forecasts for the purposes of comparison. <sup>1</sup>USA and Canada. <sup>2</sup>The Euro zone aggregate is taken from our panel's latest forecasts (pages 18-19). The Euro zone current account data and forecasts are based on extra-euro zone data, i.e., an aggregate of the Euro zone member states' transactions with nonresidents of the Euro zone. The European Union data includes the Euro zone countries listed on page 18 plus Denmark, Sweden and the United Kingdom, as well as the Czech Republic, Hungary, Lithuania and Poland, plus Romania and Bulgaria which entered in January 2007, plus Croatia which entered in July 2013 (data taken from Eastern Europe Consensus Forecasts). Western Europe comprises the six Euro zone countries listed above, plus Austria, Denmark, Finland, Greece, Ireland, Norway, Portugal, Sweden, Switzerland and the United Kingdom. <sup>3</sup>Survey results for Japan plus fifteen other countries taken from **Asia Pacific Consensus Forecasts**. <sup>4</sup>Twenty-seven countries, including eleven European Union countries taken from the latest issue of **Eastern Europe Consensus Forecasts**. <sup>5</sup>Eighteen countries taken from the latest issue of **Latin American Consensus Forecasts** (inflation figures are on a December/December basis). <sup>6</sup>Egypt, Israel, Nigeria, Saudi Arabia and South Africa. <sup>7</sup>The **Eastern Europe** and **Latin American** components of the **World Total** are taken from the prior month's surveys.
