**IN THE MATTER OF** the Ontario Energy Board Act, 1998, S.O.

1998, c.15, (Schedule B); **AND IN THE MATTER OF** an

Application by Westario Power Inc. to the Ontario Energy Board for an Order or Orders approving or fixing just and reasonable distribution rates and other service charges to be effective January 1, 2021.

## Manager's Summary

### 1. Application

Westario Power Inc. ("Westario Power") hereby applies to the Ontario Energy Board (the "Board") for approval of its 2021 Distribution Rate Adjustments effective Jan 1, 2021. Westario Power applies for an Order or Orders approving the proposed distribution rates and other charges as set out in Appendix 2 of this Application as just and reasonable rates and charges pursuant to Section 78 of the OEB Act.

Westario Power has followed Chapter 3 of the Board's Filing Requirements for Electricity Distribution Rate Applications dated May 14, 2020 along with the Key References listed at Chapter 3 Incentive Rate-Setting Applications

Westario Power requests that this application be disposed of by way of a written hearing. Westario Power confirms that the billing determinants used in the model are from most recent reported RRR filings. The utility reviewed both the existing "Tariff Sheets" and billing determinants in the pre-populated worksheets and confirms that they are accurate.

Westario Power attests that the utility, its shareholder and all its customer classes will be affected by the outcome of this application.

In the preparation of this application, Westario Power used the 2021 IRM Rate Generator issued on July 14, 2020 and the GA Analysis Work Form issued May 20, 2020. Westario confirms the accuracy of prepopulated information in the 2021 IRM Rate Generator Model. The rate and other adjustments being applied for and as calculated using the above models include a Price Cap Incentive Rate-Setting ("Price Cap IR") option to adjust

its 2021 rates. (The Price Cap IR methodology provides for a mechanistic and formulaic adjustment to distribution rates and charges in the period between Cost of Service applications). The model also adjusts Retail Transmission Service Rates in accordance with Board Guideline G-2008-0001 - Electricity Distribution Retail Transmission Service Rates revised on June 28, 2012.

Along with revisions to its distribution rates, Westario Power also seeks approval of the following matter;

- Continuance of the Specific Services charges and Loss Factors.
- Continuance of the Micro Fit monthly charge.
- Continuance of the Smart Meter Entity charge.

The annual adjustment mechanism is not being applied to the following components of delivery rates: Rate Adders, Rate Riders, Low Voltage Service Charges, Retail Transmission Service Rates, Wholesale Market Service Rate, Rural and Remote Rate Protection Benefit and Charge, Standard Supply Service – Administrative Charge, MicroFit Service Charge, Specific Service Charges, Transformation and Primary Metering Allowances, Smart Metering Entity Charge

Malcolm McCallum, Vice President Finance/CFO of Westario Power Inc. has certified that the evidence filed in the herein application is accurate to the best of his knowledge, See Appendix 5.

#### 4. Price Cap Adjustment (Ch3 3.2.1)

As per Board policy (Chapter 3), distribution rates are to be adjusted per the Price Cap model presented through the Board's Rate Generator model. The calculation would be based on the annual percentage change in the GDP-IPI index.

In accordance with the Report of the Board: Rate Setting Parameters and Benchmarking under the Renewed Regulatory Framework for Ontario's Electricity Distributors, Westario Power has used an assigned Stretch Factor Group III to calculate its Price Cap. The following table shows the Westario Power's factor to its Price Cap Adjustment.

**Table 1 – Price Cap Parameters**

Stretch Factor Group	III
Price Escalator	2.00%
Stretch Factor Value	0.30%
Productivity Factor	0.00%
Price Cap Index	1.70%

Westario Power has used the 2020 Price Cap Parameters to complete the model. Future updates to components of the price cap index calculation, to be completed by Board Staff as the update becomes available, may impact the final price cap adjustment being applied to the current model.

The price factor adjustment under this application would apply to the fixed and volumetric distribution rates for Westario Power, it would not affect the following:

- Rate adders and riders
- Low voltage service charges
- Retail Transmission Service Rates
- Wholesale Market Service Rate
- Rural Rate Protection Charge
- Standard Supply Service – Administrative Charge
- MicroFit Service Charge
- Specific Service Charges

## 5. Revenue to Cost Ratio Adjustments (Ch 3 3.2.2)

Westario Power is not proposing to adjust its revenue to cost ratios in this proceeding as its revenue to cost ratios were set as part of the 2018 Cost of Service Application.

## 6. Rate Design for Residential Electricity (Ch3 3.2.3)

In accordance with the new Rate Design for Residential Electricity policy issued on April 2, 2015, Westario Power followed the approach set out in sheet 16 of the rate generator model. In 2019, the fourth year of the transition, Westario made the final upward adjustment required by the rate design policy and their residential rates have transitioned to a fully fixed structure. Table 2 shows the existing rates compared to the proposed rates. The bill impacts are discussed further at Section 15 of this application.

**Table 2 – Current vs Proposed Distribution Rates**

Rate Class	Current MFC	Current Volumetric Charge	Proposed MFC	Proposed Volumetric Charge

MicroFit SERVICE CLASSIFICATION	10.00	Nil	10.00	Nil

## 7. RTSR Adjustments (Ch3 3.2.4)

Westario Power is applying for an adjustment of its Retail Transmission Service Rates based on a comparison of historical transmission costs adjusted for new UTR levels and revenues generated from existing RTSRs. This approach is expected to minimize variances in the USoA Accounts 1584 and 1586.

Westario Power used the RTSR Adjustment Worksheets embedded in the IRM Model, to determine the proposed adjustments to the current Retail Transmission Service Rates approved in 2020 IRM application.

The Loss Factor applied to the metered kWh is the Board-approved 2018 Loss Factor.

The proposed adjustments of the Retail Transmission Service Rates are shown in the table below and the detailed calculations can be found in the 2021 IRM Model filed in conjunction with this application.

**Table 3 – Proposed RTSR**

Rate Class	Unit	Current RTSR- Network	Proposed RTSR-Network

## 8. Deferral and Variance Accounts (Ch3 3.2.5)

Westario Power has completed the Board Staff's 2021 IRM Rate Generator – Tab 3 Continuity Schedule and the threshold test at tab 4 shows a claim per kWh of \$0.0021. The Report of the Board on Electricity Distributors' Deferral and Variance Account Review Report (the "EDDVAR Report") provides that during the IRM plan term, the distributor's Group 1 audited account balances will be reviewed and disposed if the pre-set disposition

threshold of \$0.001 per kWh (debit or credit) is exceeded. Since the claim does exceed this threshold test amount Westario Power is proposing to dispose of its deferral and variance account in this proceeding.

The variance in the 1580 “RSVA – Wholesale Market Service Charge” account on the continuity schedule from 2.1.7 of the RRR filing is caused by the amount for a sub-account being double counted in the way that the 2.1.7 RRR data is displayed on the continuity schedule. The total account 1580 balance at the end of 2019 was a credit of \$207,537. (\$153,447) of this balance belongs with the sub account “RSVA – Wholesale Market Service Charge” and (\$54,090) belongs with “Variance WMS – Sub-account CBR Class B”. The amount shown on the continuity schedule for “RSVA – Wholesale Market Service Charge” is the entire 1580 balance including the amounts that should be broken out into the sub-account.

Westario is requesting the disposition of the residual balance of it’s 2017 1595 account. Westario has completed the 1595 Analysis workform for this residual value and confirms that it is within the 10% unresolved differences threshold. It has been over a year since the 2017 1595 rate rider’s sunset date has expired. This is Westario’s first time disposing of this balance and Westario expects no further dispositions of this account in the future.

There are no adjustments to any deferral and variance account balances previously approved by the OEB on a final basis were made. An OEB audit of Westario’s 1588 and 1589 account balances was completed for the years 2016–2018. There are prior period adjustments required for either of these accounts that were disposed of on an interim balance.

## 9. Specific Service Charge and Loss Factors

Westario Power is applying to continue the current Specific Service Charges, and Loss Factors as approved by the Board (EB-2017-0084).

## 10. Global Adjustment Process (3.2.5.2)

The GA Analysis work form has unresolved differences as a percentage of Expected GA payments to IESO of 0.1% in 2019. This variance is within the 1.0% unresolved difference

threshold. The calculated loss factor in 2019 is within 1% of Westario's most recently approved loss factor.

Westario Power's CFO certifies that Westario Power has processes and internal controls in place for the preparation, review, verification and oversight of the account balances being disposed, consistent with the certification requirements in Chapter 1 of the filing requirements. Also, that Westario Power has fully implemented the OEB's February 21, 2019 guidance effective from January 1, 2019, see Appendix 5.

#### 11. Class A/B Transition Customers

Westario Power has 3 customers that transitioned from Class B to Class A in 2019. The required adjustments for these customers are included on tabs 6, 6.1a, 6.1 and 6.2a of the IRM Rate Generator Model. These transitions have resulted in total credits of \$2,789 for Global Adjustment and \$270 for CBR. Rather than applying monthly credits to these customers invoices Westario Power Inc. would like to apply the total credits to the customers' accounts in January 2021.

#### 12. Disposition of LRAM (Ch3 3.2.6)

In accordance with the Board's Guidelines for Electricity Distributor Conservation and Demand Management (EB-2012-0003) issued on April 26, 2012, at a minimum, distributors must apply for disposition of the balance in the LRAMVA at the time of their Cost of Service rate applications.

Westario Power disposed of its balances in account 1568 in its 2018 Cost of Service application and plans to dispose of any balances since then in its next Cost of Service Application.

#### 13. Tax Change (ch3 3.2.7)

The IRM model indicates that the utility is not subject to a tax change. The impacts of Bill C-97 resulting increased CCA deductions on first year acquisitions will be tracked in account 1592. As per the Chapter 3 filing requirements "...determinations as to the

appropriate disposition methodology will be made at the time of each distributor's cost-based application."

#### 14. ICM / Z-Factor (Ch3 3.2.8)

Westario Power is not applying for recovery of Incremental Capital or Z-Factor in this proceeding.

#### 15. Current Tariff Sheets

Westario Power current tariff sheets are provided in Appendix 1.

#### 16. Proposed Tariff Sheets

The proposed tariff sheets generated by the 2020 IRM Rate Generator are provided in the Appendix 2.

#### 17. Bill Impacts

Table 4 below shows the proposed bill impacts as calculated at Sheet 20 of the model.

**Table 4 – Summary of Bill Impacts**

RATE CLASSES / CATEGORIES (eg: Residential TOU, Residential Retailer)	Units	Total

With the exception of the residential and GS<50 which use the typical 750 kWh/month and 2000 kWh/month respectively, the other classes were calculated using a typical monthly average consumption and number of connections.

## Appendix 3: Bill Impacts

The bill comparisons below must be provided for typical customers and consumption levels. Bill impacts must be provided for residential customers consuming 750 kWh per month and general service customers consuming 2,000 kWh per month and having a monthly demand of less than 50 kW. Include bill comparisons for Non-RPP (retailer) as well. **To assess the combined effects of the shift to fixed rates and other bill impacts associated with changes in the cost of distribution service, applicants are to include a total bill impact for a residential customer at the distributor's 10th consumption percentile (In other words, 10% of a distributor's residential customers consume at or less than this level of consumption on a monthly basis). Refer to section 3.2.3 of the Chapter 3 Filing Requirements For Electricity Distribution Rate Applications.**

For certain classes where one or more customers have unique consumption and demand patterns and which may be significantly impacted by the proposed rate changes, the distributor must show a typical comparison, and provide an explanation.

Note:

1. For those classes that are not eligible for the RPP price, the weighted average price including Class B GA through end of May 2018 of \$0.1117/kWh (IESO's Monthly Market Report for May 2018, page 22) has been used to represent the cost of power. For those classes on a retailer contract, applicants should enter the contract price (plus GA) for a more accurate estimate. Changes to the cost of power can be made directly on the bill impact table for the specific class.
2. Please enter the applicable billing determinant (e.g. number of connections or devices) to be applied to the monthly service charge for unmetered rate classes in column N. If the monthly service charge is applied on a per customer basis, enter the number "1". Distributors should provide the number of connections or devices reflective of a typical customer in each class.

### Notes:

- General** Data inputs are required on Sheets 3. Data from Sheet 3 will automatically complete calculations on sheets 4 through 9 (Rate Base through Revenue Requirement). Sheets 4 through 9 do not require any inputs except for notes that the Applicant may wish to enter to support the results. Pale green cells are available on sheets 4 through 9 to enter both footnotes beside key cells and the related text for the notes at the bottom of each sheet.
- (1) All inputs are in dollars (\$) except where inputs are individually identified as percentages (%)
  - (2) Data in column E is for Application as originally filed. For updated revenue requirement as a result of interrogatory responses, technical or settlement conferences, etc., use column M and Adjustments in column I
  - (3) Net of addbacks and deductions to arrive at taxable income.
  - (4) Average of Gross Fixed Assets at beginning and end of the Test Year
  - (5) Average of Accumulated Depreciation at the beginning and end of the Test Year. Enter as a negative amount.
  - (6) Select option from drop-down list by clicking on cell M10. This column allows for the application update reflecting the end of discovery or Argument-in-Chief. Also, the outcome of any Settlement Process can be reflected.
  - (7) Input total revenue offsets for deriving the base revenue requirement from the service revenue requirement
  - (8) 4.0% unless an Applicant has proposed or been approved for another amount.
  - (9) The default Working Capital Allowance factor is **7.5%** (of Cost of Power plus controllable expenses), per the letter issued by the Board on June 3, 2015. Alternatively, a WCA factor based on lead-lag study, with supporting rationale could be provided.
