RE Account 200076748387

I understand that the OEB is eliminating the Seasonal Rate class which our property has been classified as to date. While I understand that our property electrical rates should increase to appropriately reflect the costs, I do not understand the new ratings at all.

From the table that was sent with the information about the changes due in 2022, it appears that higher monthly consumption of electricity has reduced % increase.

I am terribly confused by this. I thought that we were supposed to try to reduce our consumption. However, from this chart my charges would go up by approximately 54% whereas if I used MORE electricity it would only go up by approximately 20% . Please help me understand this.

There is something fundamentally wrong with a system that rewards HIGHER CONSUMPTION.
