I strongly object this elimination of seasonal rate class. We were bombarded with policies to lower our usage of electricity due to government proclaimed, ideologically driven, Climate Change Emergency. Principally due the cost of the required Unsustainable infrastructure replacement, the system now requires heavy usage of electricity to support it. Now we are being penalized for adhering to these political decisions.

In our case the annual bill in R2 class would effectively double the cost, from about 750\$ to 1400\$. This is an unethical gouging of population by authorities in order to pay for their own mistakes.
