Please see attached letter with regards to our seasonal property. There is NO reason, that just because we previously were regarded as a seasonal customer, that the delivery rate should be the same rate we were paying PLUS any additional amount. We should be treated the same, whether a seasonal or residential customer

RE: Ontario Energy Board Hearing to consider the next steps in eliminating Hydro One Networks Inc's Seasonal Rate Class (EB2020-0246)

---

Seasonal Rate customers' delivery of electricity has consistently been high. Based on a letter that we received from Hydro One, they indicate that we will move into the residential low density rating which means, according to Hydro One information in the letter that was sent to us, that our delivery rate would rise by (54%).

It is unacceptable that seasonal rate customers delivery of electricity go up by 54% per month as there is no reason why seasonal rate customers should pay more than the existing residential customers for their delivery of electricity as your delivery infrastructure must be the same for the locals.

A full time resident who lives within 2 km from one of our seasonal properties, on a road similar to ours has a monthly delivery rate of \$70.76, is similar to ours. In all fairness, the delivery rate should be the same for all residents in the area. There is NO reason, that just because we previously were regarded as a seasonal customer, that the delivery rate should be the same as before PLUS any additional amount. We should all be treated the same, whether a seasonal or residential customer.
