What's the point of elimination of seasonal status and replacing with a low density rate for delivery charges for seasonal residences? There should be no difference between full time and part time residences for delivery charges or maintaining services for all. So what has motivated this change? Minority residences are being gauged for the benefit of the Hydro One. The last several reporting periods showed 25%+ profit increase, Also, we can't accept that our neighbours on either side are full time cottage residences but we will be paying almost double for same services? We don't mind sharing fairly to maintain the assets that provide services but an increase of 100% is definitely unjustified.

Therefore, we strongly object to the charges as shown in your notice.
