Pertaining to file # EB-2020-0246...regarding the elimination of the Seasonal Rate Class...I feel the roughly 150,000 customers that fall within this classification do support the overall system. Without that segment, cost would be greatly increased to the other three classes.

Whether our property is on the grid...or not...lines still need to run and maintained. Having cleared land and roadways, only helps to keep Hydro's costs down. Personally; I feel being charged the current distribution fee for 6 months of none-use is more than sufficient to defray a portion of expense from "full time" customers. I also feel an increase of over 100%....is extremely unfair.
