I am a seasonal hydro customer who is affected by this increase you want to pass. My seasonal property is only accessible 8 months of the year. However, I currently pay for hydro to be delivered for 12 months of the year as a seasonal customer. Which I do not have an issue with. The cost of delivery fees for those months I can not use property are approximately \$66.00 a month. Now I find out you want to increase that 54% by making me a low density (R2) customer. An increase of 54% is unaffordable, I am retired and on a fixed income and that income sure doesn't go up. A 54% increase is unaffordable, could you afford your rates going up 54%? I paid 79.33 a month delivery costs for the 3 main months I used the property a 54% increase would take those delivery charges to \$122.16 a month. I have spoke to OEB and Ontario Hydro and have been told that Ontario Hydro do not want these changes that they want their seasonal customers to remain seasonal, so why is this being forced on them and in turn on us?
