Upon reading the notice from Hydro One, under the OEB file #EB-2020-0246, I understand I will be moved to a residential low density (R2) class. Even though with no hydro during the winter months (seasonal) I still pay the for delivery to the pole for the entire year at the cottage. If I understand the chart sent with the notice, because I am seasonal, and class 50kWh, it looks like a 100% increase in rates. Please explain why it is unfair to turn off the hydro during the winter months?
