OE Board.

Toronto Ont.

MYP 1E4

OEB Case EB-2020-0246

Dear Sir

We are in receipt of your letter re:
Seasonal Rate Class for cottages, camps used
only part time.

Our bill shows for now an average of 129.23 kWh
when I called the OE Board I got no information
but told to call Ont. Hydro. I did this & find out
our rate will increase 95% isn't this a little
excessive we only got an increase on our OAA
& CPP of about total \$10.00. We would fall into the R2 class.
I asked if like our residential bills will we be
charged a delivery charge & would there still be
a rate time of use & the girl at Ont Hydro could not
answer these questions. Who can? My other question
was you show 3 monthly consumption 50 350 & 1000
We used 129.23 does that move us into the 350 column
or will there be more consumption rate brackets?
if we go to the 50 kWh our monthly payment would be 114.13
if we go to the 350 kWh ✓ ✓ ✓ ✓ 153.48
The increase per month will be high & if deliver charge
is on top of this it will be over 100% How can
you justify this high an increase. The lines are still

2.

there, there doesn't have to be any major expenses to justify your increased rate.

We are a cottage/camp up north (not in Muskoka) are over 80 years old.

I realize answers will probably be forthcoming but right now there is no enough information available & when you don't have answers it is scary.

You state the total bill. will increase by more than 100% but that's not what the chart shows us.

We realize any decisions made will be done & we won't have ~~any~~ much impact. We hope you will have public hearings for input, but realizing you can't go all over the province we remain hopeful.

Yours truly
Deanna Russell
Wm. Russell
