I do not understand how you can justify doubling out rate for our electricity at our cottage. We were paying around 600.00 a year for delivery and last year only used 130.00 worth of electricity for the year. Now is my understanding that you are doubling the delivery rate to 1200.00 + even though our actual use is minimal. I would really like someone to explain to me why this is right and justify this 100% increase????
