re: EB-2020-0246.

This isn't to contend with the rationale presented, though the current rates for infrastructure are paid on a 12 month basis regardless of seasonal use and they are high. What I want as a seasonal user is a smart meter and a time of day usage discount. Currently I do not have that and such a universal service would seem reasonable so I can choose to use at cheaper times. I think approval of the change should be conditional on providing time of use discounts to all who so desire.
