After talking to several people at the OEB and Hydro One it looks like our delivery charge will go up by 120% - Interesting that people at both found the chart supplied in the letter as confusing as I did. As a seasonal resident right now over 75% of our annual billing is delivery charges vs usage and. As we all try to be responsible and limit use where cost is already upside down, it's going to get worse. Where is the incentive here? I get that I am low density but unlike years ago where Hydro would run a line anywhere service was requested I paid a ton to bring it to my property and pay delivery for the 6 months it is not in use. Some seasonal going to go down 44% and others up 120%. I requested to see the grid that defines that as no one at the OEB or Hydro could explain what defines the difference and where I sat in the puzzle.

Please show me the data - the grid in your letter doesn't cut it
