Thank you sharing this information about the elimination of the Seasonal Rate class for Hydro One customers . HOWEVER, a combination of an erratic laptop and my lack of "legal-speak" on your site, has left me more confused than ever! I managed to see that for some rural areas, the "delivery-charge " is higher than in an urban setting. Understandable , to a point. What avenues have been undertaken by the OEB / Hydro One to explore other areas within their domain to recover some 'cost' savings, thereby helping out those of us who have a property in the "seasonal" area of service ? Years ago when the Province had "Ontario Hydro", other than over-inflated salaries for the 'top-guns', I thought monies were better managed. Since one Ontario government or another, took "hydro" out of the Public Domain, it seems everything to do with our hydro use has gone through the roof, sadly. Does Ontario really need 2 'hydro' companies now? There might be savings being able to be passed on to the "consumers" if some "cost-cutting" were to be done at higher levels in these corporations (in my humble opinion ..but then, I don't have a degree in Business Admin.) I, for one, would very much like to see..in layman's terms, any response to investigating any / ALL cost saving measures before. this change / elimination of the "Seasonal Rate class".

Thank you for your time and consideration in this matter, Regards, Scott clare
