I would like to express my extreme dissatisfaction with this decision. I purchased my modest seasonal cottage 22 years ago and have recently retired.

I already felt that my hydro rates were unfair at the cottage because the delivery charges were so high. At my rural residence, delivery charges are less than the electricity consumed, while at the cottage delivery charges are currently up to 6 times the electricity consumed. Delivery charges at the cottage are currently in the neighborhood of \$200 per bill. I can't imagine them going even higher. In addition, I would submit that it is just not logical to charge the people that use the least hydro, the highest rate. All the efforts of conserving hydro then get penalized instead of rewarded.

Sincerely
Mark Riemenschneider
