To Whom this May Concern:

The above property is located directly on [REDACTED] where hydro currently runs and services primary home property owners living year round at [REDACTED]. My question is why should I have to pay more for hydro than people that live here year round?? The property I own was previously owned by someone who used it year round. This is nothing to do with the distribution hydro provides to second property holders. This is all about getting more money for the private investors, CEO and top executives at hydro. There is no reason why people that own two properties should have to pay more for hydro. I know of two Native Canadian families that have cottages on Curve Lake Reservation and do not have to pay the delivery cost for hydro, why?? What about Canadians that have families who fought in World Wars? Should they not get a break in delivery cost or second homes? This is very frustrating, why should I be penalized for trying to provide a safe, fun place for my family to vacation at? I support local business in the area, spend money on tourism in this area and then I am expected to pay more for hydro? It makes no sense at all.

Sincerely,

Doug Lynch
