**Re: Entegrus-Main Rate Zone 2022 IRM Rates Application – Application Update  
Board File No.: EB-2021-0017**

Dear Ms. Long,

On August 18, 2021, Entegrus Powerlines Inc. (“Entegrus”) filed an IRM Application (the “Application”) for the Entegrus-Main rate zone for rates effective May 1, 2022. The Application included a request for disposition of Group One variance accounts (the “variance accounts”) for the period of January 1, 2020, to December 31, 2020.

In October 2021, multiple system configuration errors were detected between the Entegrus distribution system and the transmitter’s (or host distributor’s) system; these configuration errors impact Entegrus metered loads. The metering impact may be significant in terms of the 2020 Entegrus variance account balances initially proposed for disposition in the Entegrus-Main Application, filed on August 18, 2021. Management is currently engaging with the transmitter and will conduct validations to further assess and resolve this issue.

To facilitate the timely completion of the current IRM process for rates effective May 1, 2022, Entegrus respectfully requests the withdrawal of the Entegrus-Main 2020 Group One variance account balances disposition request from the Application (except for the LRAM variance account). The withdrawal of the Group One disposition (except for the LRAM variance account) will result in a net bill decrease to Entegrus-Main customers compared to what was originally proposed. Entegrus currently plans to request disposition of the 2020 Group One variance account balances in the 2023 Entegrus-Main IRM Application.

Entegrus will work with Board Staff to update the impacted sections of the Managers Summary and IRM models.

If you have any further questions, please do not hesitate to contact us.

Regards,
