1	EX	HIBIT 3 – CUSTOMER AND LOAD FORECAST
2		
3	<u>Int</u>	errogatory 3-Staff-52
4		
5	Lo	ad Forecast
6	Re	f: Exhibit 3, pages 5-15
7		
8	Pre	eamble:
9		
10	Kir	ngston Hydro states that "A time-series autoregressive model using the Prais-
11	Wi	nsten estimation was used for the Residential class to account for
12	au	tocorrelation." OEB staff notes that Prais-Winsten estimation is indicated as
13	ha	ving been used for all rate classes forecasted using regression methodologies.
14		
15	Qu	estion(s):
16		
17	a)	Please confirm that Prais-Winsten was used for all rate classes, or explain
18		which methodologies were used and for which customer class models?
19	b)	Did Kingston Hydro test for autocorrelation, and if so, for which rate classes?
20	c)	Can Kingston Hydro explain the negative sign on the constant in the
21		residential and GS<50 regression model?
22		
23	Re	sponse
24		
25	a)	Confirmed.
26		
27	b)	One of the statistical measures included in regression outputs (Tables 7, 9, 11, and

Kingston Hydro Corporation EB-2022-0044 Responses to OEB Interrogatories Filed: 20 September, 2022 OEB Interrogatory 3-Staff-52 Page **2** of **2**

- 13 of the Load Forecast Report) is the Durbin-Watson statistic which is a test for
 autocorrelation. The Durbin-Watson statistic for each class model is between 1.9
 and 2.1, well within the acceptable range of 1.5 to 2.5 indicating no autocorrelation.
- 4 5 c) Constants often have negative signs when the model includes variables that are 6 consistent positive values such as the number of days in a month, customer counts, 7 GDP, and employment variables. The constant can be considered jointly with the 8 lowest values of these variables, with incremental values causing an incremental 9 impact on consumption. Please see the tables below with an 'Adjusted Constant' 10 calculated which reflects a base value similar to a constant when none of these 11 variables are used. Please note that the constants would be positive if these 12 variables were not included in the regression (though the statistical results would be 13 weaker).

2					
3	Interrogatory 3-Staff-53				
4					
5	Lo	ad Forecast			
6	Re	f: Exhibit 3, page 20			
7					
8	Pre	eamble:			
9					
10	GS	< 50 kW customer counts have been declining and are forecast to continue to			
11	de	crease in the 2023 Test Year. The GS > 50 kW customer count decreased from			
12	37	1 in 2013 to 325 in 2014 (a loss of 12.5% in one year).			
13					
14	Qu	estion(s):			
15					
16	a)	Can Kingston Hydro provide the reason for the loss of GS<50 kW customers?			
17	b)	Does Kingston Hydro know the reason for the loss of GS > 50 kW customers			
18		in 2014, and why this would be predictive of losses in 2022 and 2023?			
19					
20	Re	sponse			
21					
22	a)	Please see 3-SEC-19.			
23					
24	b)	Yes, the main reason for the loss of $GS > 50$ kW customers in 2014, as noted in			
25		Kingston Hydro's Custom IR application, EB-2015-0083, Ex. 3 T.2 S.1 p.4, lines 21-			
26		23, "a mass re-classification of 53 customers from the GS>50 rate class to the			
27		GS<50 rate class occurred in January 2014." There were also some			

Kingston Hydro Corporation EB-2022-0044 Responses to OEB Interrogatories Filed: 20 September, 2022 OEB Interrogatory 3-Staff-53 Page **2** of **2**

1	reclassifications to GS>50 from GS<50, with the net result being a GS>50 kW
2	customer count decrease from 371 in 2013 to 325 in 2014.
3	
4	Kingston Hydro's GS > 50 kW customers are regularly reclassified due to reduced
5	monthly demands. Though the number of reclassifications was relatively high in
6	2014, this negative growth rate within the long-run average accurately reflects the
7	declining trend in the GS > 50 kW customer count over time. The reclassifications in
8	2014 were not due to external circumstances that are not expected to occur again.
9	KHC notes that the forecast 10-year average growth rate calculated with the 2014
10	growth rate included results in a forecast annual decline of 5 customers per year,
11	which is consistent with the average number of GS > 50 kW customers lost per year
12	since 2018.

6	Re	f: Load Forecast			
7					
8	Qu	estion(s):			
9					
10	a)	How has EV penetration been factored into load growth expectation over the			
11		forecast period?			
12	b)	Has Kingston Hydro Electricity Distribution Ontario developed a load forecast			
13		specifically for EV growth?			
14	c)	Has Kingston Hydro considered the impact of Distributed Energy Resources			
15		or other emerging technologies on its load forecast? Please explain your			
16		response.			
17					
18	Re	sponse			
19					
20	a)	EV penetration has not been factored into load growth in the forecast period.			
21					
22	b)	Kingston Hydro has not developed a load forecast specifically for EV growth. The			
23		main reason is that Kingston Hydro expects most EV charging in its distribution			
24		territory will be at home during off peak times. This will likely be further			
25		substantiated by the extra low off-peak rate that OEB plans to implement.			
26					
27	c)	The impact of Distributed Energy Resources (DER) has not been considered in the			

Kingston Hydro Corporation EB-2022-0044 Responses to OEB Interrogatories Filed: 20 September, 2022 OEB Interrogatory 3-Staff-55 Page **2** of **2**

1 load forecast. Kingston Hydro is aware of potential DER projects in the Large Use 2 rate class, however, the timing of these projects was uncertain when the load 3 forecast was developed. The penetration of renewable DER is still relatively low for 4 Kingston Hydro's system and there has not been any battery storage connected yet. There is a pending project expected to connect in 2024-2025 which is beyond the 5 6 2023 rate setting timeframe. At the time the Standby charge was developed, the 7 impact of a large 15MW DER was considered. Since Kingston Hydro has Standby 8 Charges for this class, and the GS < 50 kW, GS 50- 4,999 kW classes, DERs will 9 generally not impact loads for the purposes of rate design.

9		
10	Ele	nchus describes the methodology for a manual CDM adjustment and provides
11	the	proposed CDM adjustments (Table 35) by customer class.
12		
13	Qu	estion(s):
14		
15	a)	Please describe how the proposed CDM adjustments in Table 35 (shown in
16		kWh) are converted into kW adjustments for the GS>50 kW and Large Use
17		customer classes.
18		
19	Res	sponse
20		
21	a)	The proposed CDM adjustments in Table 35 are converted to kW adjustments using
22		the same kW/kWh ratio used to convert kWh forecasts to kW forecasts. The GS>50 $$
23		CDM adjustment is converted with the ratio provided in Table 23 and the Large Use
24		ratio is converted with the ratio provided in Table 29.

Kingston Hydro Corporation EB-2022-0044 Responses to SEC Interrogatories Filed: 20 September, 2022 SEC Interrogatory 3-SEC-19 Page 1 of 1

1 Interrogatory 3-SEC-19

2 3 [Ex.3, Appendix 2-IB] Customer numbers for both the GS < 50 kW and GS > 50 kW classes have declined since 2017. Please provide Kingston Hydro's analysis of 4 why this has occurred and whether it expects this trend to continue. 5 6 7 Response 8 9 Kingston Hydro cannot provide any analysis however offers the following observation that the customer numbers for both GS<50kW and GS>50kW have declined since 2017 10 11 due to many potential factors, including but not limited to, the ongoing COVID 19

- 12 pandemic, sub-meter retrofits to existing bulk-metered multi-unit buildings (especially
- 13 apartments), CDM and energy efficiency, impact of residential intensification on
- 14 lease/land costs in downtown and flight of commercial business to the suburbs.

1	OF	PERATING REVENUE (EXHIBIT 3)	
2			
3	<u>Int</u>	errogatory 3.0-VECC -13	
4			
5	Re	ference: Exhibit 3, Elenchus Report, page 2	
6	Pre	eamble: The Report states:	
7			
8	"A	range of COVID variables were considered to account for the impacts of the	
9	on	going COVID-19 pandemic. The extent to which consumption since March 2020	
10	dif	fered from typical consumption was found to be related to the weather	
11	va	riables in those months. A set of COVID/weather interaction variables were	
12	CO	nsidered to capture the incremental consumption caused by people working	
13	from home and generally staying at home due to lockdowns. These variables,		
14	"H	DD COVID" and "CDD COVID" are equal to the relevant HDD and CDD variables	
15	sin	nce March 2020, and 0 in all earlier months. The coefficients reflect incremental	
16	he	ating and cooling load consumed as people stayed home during the pandemic.	
17	Th	ese variables continue to December 2021 but are reduced to 75% of HDD and	
18	CL	DD in all months in 2022 and 50% in 2023."	
19			
20	a)	Please confirm that the referenced paragraph deals with the Residential class.	
21	b)	Did Elenchus test alternative COVID flag variables for the Residential class?	
22		If yes, what variables were tested and did the results using the "HDD COVID"	
23		and "CDD COVID" variables provide the best statistical results?	
24	c)	What is the impact on the Residential forecast for 2023 of using a 100%	
25		reduction (i.e., the COVID flags are zero) as opposed to a 50% reduction?	

Kingston Hydro Corporation EB-2022-0044 Responses to VECC Interrogatories Filed: 20 September, 2022 VECC Interrogatory 3.0-VECC-13 Page **2** of **2**

1	Response		
2			
3	a)	Confirmed.	
4			
5	b)	Yes, Elenchus tested the COVID and COVID_AM variables. The "HDD COVID" and	
6		"CDD COVID" variables provided the best statistical results. In addition to stronger	
7		overall model statistics, the statistical significance of most other variables is	
8		stronger.	
9			
10	c)	The test year Residential consumption forecast is 181,949,892 when the COVID	
11		forecast value is set to 0. This scenario is provided in 3-Staff-54 Attachment 1.	

Kingston Hydro Corporation EB-2022-0044 Responses to VECC Interrogatories Filed: 20 September, 2022 VECC Interrogatory 3.0-VECC-14 Page 1 of 2

1	OPERATING REVENUE (EXHIBIT 3)
2	
3	Interrogatory 3.0-VECC -14
4	
5	Reference: Exhibit 3, Elenchus Report, page 2
6	
7	Preamble: The Application states:
8	
9	"COVID flag variables were tested and found to be statistically significant for the
10	General Service < 50 kW and General Service > 50 kW, and Large Use classes. A
11	"COVID" variable equal to 0 in all months prior to March 2020 and 1 in all months
12	since March 2020 and a "COVID_AM" variable equal to 0 in all months prior to
13	March 2020, equal to 1 in April and May 2020, and 0.5 in each month from June
14	2020 to December 2021 were tested. The "COVID_AM" variable considers the
15	incremental impact in the first few months of the pandemic, with lower impacts
16	after May 2020. The "COVID_AM" variable is used for each of the General Service
17	< 50 kW and General Service > 50 kW, and Large Use classes."
18	
19	a) For each of the three customer classes, did the COVID_AM variable result in a
20	better model (i.e., better statistical results) than the COVID variable?
21	b) For each of the three customer classes, what is the impact on the 2023 load
22	forecast of setting the COVID_AM variable at zero and opposed to 0.25?
23	
24	Response
25	
26	a) Yes, for each of the three classes the COVID_AM variable had a higher t-statistic

27 than the COVID variable. Furthermore, the overall models had higher R-squared

Kingston Hydro Corporation EB-2022-0044 Responses to VECC Interrogatories Filed: 20 September, 2022 VECC Interrogatory 3.0-VECC-14 Page **2** of **2**

1		values when the COVID_AM variable is used than the COVID variable for each
2		class.
3		
4	b)	The test year GS < 50 kW consumption forecast is 91,233,546 kWh, the GS > 50
5		kW demand forecast is 639,038 kW, and the Large Use demand forecast is 301,075
6		kW when the COVID forecast value is set to 0. This scenario is provided in 3-Staff-
7		54 Attachment 1.

Kingston Hydro Corporation EB-2022-0044 Responses to VECC Interrogatories Filed: 20 September, 2022 VECC Interrogatory 3.0-VECC-15 Page 1 of 1

1	OPERATING REVENUE (EXHIBIT 3)
2	
3	Interrogatory 3.0-VECC -15
4	
5	Reference: Exhibit 3, Elenchus Report, pages 5 and 19
6	
7	Preamble: At page 5 the Report states:
8	
9	"The number of Residential customers was found to be statistically significant
10	and is used as an independent variable."
11	
12	At page 19 the Report states:
13	"While Residential customer counts are not a component of the regression
14	model, they are forecasted for the purpose of rate setting."
15	
16	a) Please reconcile the two statements referenced in the Preamble.
17	
18	<u>Response</u>
19	
20	a) The sentence on page 19 is not correct and should not be included in the
21	paragraph. Residential customer counts are a variable used in the regression
22	model.

2			
3	<u>Int</u>	errogatory 3.0-VECC -16	
4			
5	Re	ference: Exhibit 3, Elenchus Report,	pages 19, 21, 22, 24, 26, 27
6			
7	a)	Please provide the actual customer/	connection counts for each customer
8		class for the most recent month ava	ilable.
9			
10	<u>Re</u>	sponse	
11			
12	a)	The actual customer/connection counts	for each customer class for August 2022
13		the most recent month available are as	follows:
14			
15			
		Customer Classification	Customer/Connection Counts
		Posidontial	24 656

Customer Classification	Customer/Connection Counts
Residential	24,656
GS < 50 kW	2,938
GS 50 to 4,999 kW	323
Large Use	3
Unmetered Scattered Load	169
Street Lighting	(connections) 5,690

1	OF	PERATING REVENUE (EXHIBIT 3)
2		
3	<u>Int</u>	errogatory 3.0-VECC -17
4		
5	Re	ference: Ex. 3, Elenchus Report, pg.18/Load Forecast Model, Economic Tab
6		
7	a)	The GDP forecast used in the Application is the average of the public
8		forecasts from four major banks (BMO, TD, Scotiabank, and RBC, as of March
9		31, 2022). However, the Economic Tab in the Load Forecast model also
10		includes a GDP forecast from CIBC. Why was CIBC excluded for purposes of
11		the Application?
12		
13	<u>Re</u>	sponse
14		
15	a)	Unlike the four major banks included in the economic forecasts, CIBC does not
16		regularly publish provincial forecast data. Each bank, except CIBC, had published a
17		new forecast in the month of March 2022 so CIBC data was excluded because it
18		was out of date. Elenchus does not necessarily consider economic forecasts that
19		are 2.5 months old to be out of date, however, economic conditions were changing
20		at a faster pace in this period due to the reduced impact of the Omicron variant
21		(compared to mid-January) and increased inflation expectations.

6		
7	a) For each of the GS>50 and LU classes please provide the 202	2 monthly kWh,
8	kW for each of months where the actual results are available.	
9		
10	Response	
11		
12	a) The following table provides 2022 monthly kWh, kW for GS > 50 a	nd LU classes for
13	each of the months where actual results available:	

14

2022	GS 50 to 4,999 kW		Large Use	
	kWh	kW	kWh	kW
Jan	24,851,328.7	61,034.9	12,126,587.08	21,330.8
Feb	22,142,485.1	47,191.4	12,132,188.84	21,530.6
Mar	22,730,150.0	62,489.6	13,465,753.71	21,939.8
Apr	19,333,580.3	44,938.8	12,401,870.05	20,812.6
May	18,987,202.6	52,760.3	12,560,041.42	22,738.1
Jun	19,458,725.6	47,016.8	13,093,415.84	23,889.1
Jul	22,090,088.9	48,096.1	14,933,301.50	26,869.1

3	Int	errogatory 3.0-VECC -19
4		
5	Re	ference: Exhibit 3, Elenchus Report, page 28
6		
7	a)	Please explain why it is reasonable to use a kW/kWh ratio of 0.002739 for
8		Street Lights when the actual ratio has exceeded this value in every year
9		since 2014.
10		
11	Re	sponse
12		
13	a)	Elenchus typically uses the 10-year average unless ratios have materially changed
14		over time. The 5-year average is within 2% of the 10-year average so the ratio was
15		not adjusted to the 5-year average.

3	Int	errogatory 3.0-VECC -20
4		
5	Re	ference: Exhibit 3, pages 29-31
6		
7	a)	Please provide versions of Table 33 that show: i) KHC's Residential kWh
8		usage as a percentage of the total Provincial Residential kWh usage, ii) KHC's
9		GS<50 kWh usage as a percentage of the total Provincial GS<50 kWh usage,
10		iii) KHC's GS>50 kWh usage as a percentage of the total Provincial GS>50
11		kWh usage and iv) KHC's LU kWh usage as a percentage of the total
12		Provincial LU kWh usage.
13	b)	Are the 2021-2024 CDM Framework programs that target Commercial and
14		Industrial Users just meant to apply to customers of LDCs or also to
15		transmission-connected commercial and industrial customers that are not
16		served by an LDC?
17	c)	Is the KHC's Energy Affordability Program allocation based on the number of
18		households in Kingston within the Low-Income Measure (after tax) as a share
19		of: i) all Ontario households or ii) all Ontario households meeting the Low-
20		Income Measure criteria?
21	d)	Is Statistics Canada the source of the data for the number of households in
22		Kingston within the Low-Income Measure (after tax)? If not, what is the
23		source?
24	e)	Please explain why the sum of the CDM class allocations in Table 35 does not
25		equal the total CDM adjustment (6,292,485 kWh) in Table 34.

- a) Tables for the Residential class, the GS < 50 kW class, and a joint table for GS>50
 kW and Large Use are provided below. The annual OEB yearbooks include GS>50,
 Large Use, and ST volumes together so KHC is unable to provide separate tables
 for these two classes.

iii. & iv. GS > 50 kW, Large User, & ST					
Year	Provincial kWh	KHC kWh	KHC % Share		
2016	63,716,850,210	421,854,909	0.66%		
2017	63,722,025,934	421,473,149	0.66%		
2018	65,275,749,273	424,404,716	0.65%		
2019	64,284,293,740	417,149,959	0.65%		
2020	60,782,716,311	387,213,055	0.64%		
5-Year Avg.	63,556,327,094	414,419,158	0.65%		

- 3
- 4

b) Elenchus's understanding is that the programs are available to non-LDC customers.

- 7 c) The Energy Affordability allocation is based on the number of Kingston households
 8 in the Low Income measure as a share of (ii) all Ontario households meeting the
 9 Low Income measure criteria.
- 10

12

e) The share of GS<50 kW programs are allocated based on the historic allocation of
 kWh savings, whereas the share of GS > 50 kW and Large Use programs are
 allocated based on historic allocations of kW savings. Historically, the Retrofit
 program kWh savings allocated to GS > 50 kW and Large Use were larger than the

17 allocation of kWh savings.

¹¹ d) Confirmed.
