Subject: A recent email from Enbridge

Apparently on Dec 2 they will meet with OEB to request a substantial increase in rates. I am not alone when I say how absolutely disgustingly greedy companies are and have really pulled no punches through covid. Most big companies have made record amounts of money while increasing prices for no reason. Bridge is no exception. So many of us were not working, home more using more heat/energy. When I was working I worked away from home for months. Usually DEC/JAN until June. Yet my bills never reflected the fact my thermostat was on 14C. I call every year and every year it's same shit. They talk about the "really" cold days. Doesn't matter I wasn't there. I volunteer in a homeless shelter. I see more and more average people now on the street, in tents or shelters because they cannot pay rent on min wage especially with utilities going up up up. I struggle and worry more than I ever have. I retired in May but my 1500 a month pension is not going to hold up with higher utilities. My condo is paid for but I have a high condo fee, car payments and day to day expenses. My taxes exceed my income. Now enbridge wants to help our PM see to it we all are on the street and welfare. If there is anyone on the board who understands what average is becoming then they will not allow even a 1% increase. Somebody have a heart and a brain.

Regards
