My comment is simple; why? Why are we seeing increases upon increases for our natural gas. The price of natural gas increased from an average of 20 cents per cupic metre to 30 cents in June 2022. With an approximate 50% increase already this year, what is driving these rising rate increases that Enbridge is applying for. Is Enbridge losing money? Is Enbridge materially affected in a negative way through the current rates. Will Enbridge be able to secure our future natural gas system by increasing rates? If the answer is not yes to these questions, Enbridge does not deserve to charge customers a higher rate for this important utility.
