I am sharing my story in hopes it sheds light on how canadian citizens in their mid-30's are struggling to keep up with the rising costs of our deceitfully inflated system. I live alone in a tiny 800 square foot condensed town unit paying over \$120 a month on gas bills alone and i barely turn on my heat or any other appliance. Our maintenance fees have also gone up due to "gas inflation"..we can barely afford increased hydro, mortgage, and gas rates as is...if enbridge/government increases these costs to double half of us will be on the street. Canada is the second largest country in the world with plenty of natural resources our government needs to stop buying or refining elsewhere and start digging up our own resources to be more self reliant and cost-effective. If you want a coubtry to grow you need to stop buying resources from other countries and start harnessing our own abundant resources. This will not only reduce our own costs for utilities but will also provide jobs to thousands of hard working Canadians. Stop hiding behind the fake political notions of climate change when scientific research shows that climate change is false and just away for politicians to get money...how does giving the government money save the climate when the money goes in their pockets and nothing changes...so called pollution will be cut in half if you eliminate the transport we pay for outsourced resources. Build our own pipeline and make Canada grow instead of charging citizens to pay for your bargains from other countries. If Canada wants to be considered a powerful nation that protects its people it needs to start producing its own gas. Its honestly inhumane in this cold country to raise costs for the excuse of climate or war when in reality we are not affected by either and can selfsustain ourselves if the right leaders ignore their own greed and pockets. Stop borrowing from the banks and start harnessing our own resources to build up Canada and lower utility costs for our people.
