

Brooklin Landowners Group

Supplementary Response to Interrogatory from

School Energy Coalition

Interrogatory SEC-21

a) Elexicon states that the WSG ICM project is critical in enabling functionality of the SB project. If the OEB does not approve the SB project, would Elexicon still move ahead with the WSG project?

Response of Elexicon Energy Inc

a) Yes. The Whitby Smart Grid will substantially modernize the WRZ grid and bring about material benefits for customers. The value of the Whitby Smart Grid will however be enhanced via approval of Elexicon's application as filed, as the technologies installed will facilitate the Sustainable Brooklin Project, greater proliferation of DERs, and the potential for deferral of material infrastructure investments among other benefits.

Supplementary Response of Brooklin Landowners Group

a) The Brooklin Landowners Group's DER/EV proposal will materially enhance the utility of the Whitby Smart Grid and increase the realization of benefits from the project. The DER/EV proposal will be a catalyst for innovation and transformational change within the new Community of North Brooklin, as well as in other parts of Elexicon's service territory. Moreover, the DER/EV proposal will, in effect, be a pilot project for future, similar ventures within Elexicon's service territory and elsewhere in the Province, yielding valuable "learnings" for Elexicon and other utilities.
