# PUC Distribution Inc. ("PUC") EB-2022-0059 Settlement Proposal

Filed with OEB: March 10, 2023

#### **SUMMARY**

In reaching this complete settlement, the Parties (as defined below) have been guided by the December 15, 2022 version of the *Filing Requirements for Electricity Distribution Rate Applications*, the approved issues list attached as Schedule A to the Ontario Energy Board's (the "OEB") Decision on Issues List of October 27, 2022 ("Approved Issues List") and the Report of the OEB titled *Renewed Regulatory Framework for Electricity Distributors: A Performance-Based Approach* dated October 18, 2012 ("RRFE").

Capitalized terms used in this summary but not otherwise defined herein have the meaning ascribed to such terms elsewhere in this Settlement Proposal.

This Settlement Proposal reflects a complete settlement of the issues in this proceeding. Table A is a summary of the settlement on the issues in the Approved Issues List.

Table A – Issues List Summary

| Issue |   | Status                 | Supporting<br>Parties | Parties<br>taking no<br>position |
|-------|---|------------------------|-----------------------|----------------------------------|
| 1.1   | Capital   | Complete<br>Settlement | All                   | None                             |

The Bill Impacts as a result of this Settlement Proposal are summarized in Table C, C1 and C2 below. Table C, C-1 and C-2, respectively, represent the bill impacts assuming 2.70%, 0% and 5.4% SSG savings from VVO. The three scenarios, respectively, represent the targeted, low and high VVO savings set out in the Sault Smart Grid Project VVO Linkage to ROE Accounting Order.

The impact of the Settlement Proposal with regards to capital expenditures and OM&A expenses results in an estimated efficiency assessment of 1.7% above predicted costs using the PEG forecasting model provided by the OEB as can be seen in Table D.

**Table D: Summary of Cost Benchmarking Results** 

|                  |              | % Difference from | 3 Year Average | Efficiency |
|------------------|--------------|-------------------|----------------|------------|
| Year             | Total Cost   | Predicted         | Performance    | Assessment |
| 2021 Actual      | \$23,585,229 | 1.8%              | 2.8%           | 3          |
| 2022 Bridge Year | \$25,082,878 | 1.0%              | 1.2%           | 3          |
| 2023 Test Year   | \$29,389,162 | 1.7%              | 2.7%           | 3          |

This Settlement Proposal also incorporates the Regulated Price Plan pricing from the OEB's Regulated Price Plan Price Report ("RPP") for November 1, 2022 to October 31, 2023 (Released October 20, 2022). This Settlement Proposal also incorporates the updated Cost of Capital Parameter Updates which were issued by the Ontario Energy Board on October 20, 2022. The Revenue Requirement in Table B incorporates all of the settled issues including the RPP and Cost of Capital Parameter Updates.

This Settlement Proposal is the culmination of extensive discussion and consideration by the Parties which represent an array of interests affected by PUC's Application for electricity distribution rates. Based on the foregoing, and the evidence and rationale provided below, the Parties agree that this Settlement Proposal is appropriate and recommend its acceptance by the OEB. Refer to Appendix E for the Proposed Tariff of Rates and Charges resulting if this Settlement Proposal is accepted by the OEB.

The Sault Smart Grid (SSG) Project was initially expected to complete the physical installation in 2022. The SSG Project is now expected to complete physical installation in 2023 and reach

Substantial Completion by November 1, 2023.<sup>1</sup> The Parties agree to the creation of the new Sault Smart Grid Project Recovery Mechanism. One of purposes is to allow PUC to recover the revenue requirement for the capital expenditure associated with the SSG Project. In the absence of this mechanism and due to application of the half-year rule to additions placed in service in the test year, PUC would otherwise under recover its investment in the Project over the rate plan period. Table D.1 shows the projected spending as filed in the application on August 31, 2022 as compared to the revised projection for settlement purposes.

**Table D.1: Summary of SSG Project Spending Comparison** 

|                      | Application  |             | Settle      | ment         | Variance      |              |  |
|----------------------|--------------|-------------|-------------|--------------|---------------|--------------|--|
|                      | 2022         | 2023        | 2022        | 2023         | 2022          | 2023         |  |
| Net Project Spending | \$21,357,909 | \$3,190,371 | \$9,026,457 | \$15,521,823 | -\$12,331,452 | \$12,331,452 |  |

PUC has prepared an excel model entitled "Smart Grid Project Recovery Mechanism Revenue Requirement Rate Rider" ("SSG Model") for the purposes of calculating the associated rate rider revenue from 2022 and 2023 SSG Project capital additions. The entire SSG Project (comprised of 2022 net book value and 2023 capital additions) were removed from PUC's rate base for the purposes of setting 2023 base rates effective May 1, 2023. This is discussed further in Issue 5.3 below.

#### **BACKGROUND**

PUC filed a Cost of Service application with the OEB on August 31, 2022 under section 78 of the *Ontario Energy Board Act*, 1998, S.O. 1998, c. 15, (Schedule B) (the "Act"), seeking approval for changes to the rates that PUC charges for electricity distribution, beginning May 1, 2023 (OEB Docket Number EB-2022-0059) (the "Application").

The OEB issued and published a Notice of Hearing dated September 23, 2022, and Procedural Order No. 1 on October 18, 2022, the latter of which required the parties to the proceeding to develop a proposed issues list.

On September 27, 2022, OEB Staff sent a list of Error Checking Questions on the Application. PUC responded to these questions on October 12, 2022.

On October 24, 2022, pursuant to Procedural Order No. 1, OEB Staff submitted a proposed issues list as agreed to by the parties. OEB staff also advised the OEB that "parties may wish to raise additional matters for inclusion on the Issues List after the responses to the interrogatories are received." On October 27, 2022, the OEB issued its Decision on Issues List, approving the list

<sup>&</sup>lt;sup>1</sup> For further explanation, please refer to Pre-Settlement Clarification Question CCC-55 in Appendix F

submitted by OEB Staff. This Settlement Proposal is filed with the OEB in connection with the Application and is organized in accordance with the Approved Issues List

Procedural Order No. 1 scheduled the Settlement Conference for December 12 to 14, 2022. PUC filed its Interrogatory Responses with the OEB on November 28, 2022, pursuant to which PUC updated several models and submitted them to the OEB as Excel documents.

A Settlement Conference was convened on December 12, 13, 14, 16 and 20, 2022 in accordance with the OEB's *Rules of Practice and Procedure* (the "Rules") and the OEB's *Practice Direction on Settlement Conferences* (the "Practice Direction"). Karen Wianecki acted as facilitator for the Settlement Conference.

PUC and the following Intervenors (the "Intervenors"), participated in the Settlement Conference:

Consumers Council of Canada ("CCC") Environmental Defence Canada Inc. ("EDCI") School Energy Coalition ("SEC"); and Vulnerable Energy Consumers Coalition ("VECC").

PUC and the Intervenors are collectively referred to below as the "Parties".

OEB staff also participated in the Settlement Conference. The role adopted by OEB staff is set out in page 5 of the Practice Direction. Although OEB staff is not a party to this Settlement Proposal, as noted in the Practice Direction, OEB staff who did participate in the Settlement Conference are bound by the same confidentiality requirements that apply to the Parties to the proceeding.

This document is called a "Settlement Proposal" because it is a proposal by the Parties to the OEB to settle the issues in this proceeding. It is termed a proposal as between the Parties and the OEB. However, as between the Parties, and subject only to the OEB's approval of this Settlement Proposal, this document is intended to be a legal agreement, creating mutual obligations, and binding and enforceable in accordance with its terms. As set forth later in this Preamble, this agreement is subject to a condition subsequent, that if it is not accepted by the OEB in its entirety, then unless amended by the Parties, it is null and void and of no further effect. In entering into this Agreement, the Parties understand and agree that, pursuant to the Act, the OEB has exclusive jurisdiction with respect to the interpretation and enforcement of the terms hereof.

The Parties acknowledge that the Settlement Conference is privileged and confidential in accordance with the Practice Direction. The Parties understand that confidentiality in that context does not have the same meaning as confidentiality in the OEB's *Practice Direction on Confidential Filings* and the rules of that latter document do not apply. Instead, in the Settlement Conference, and in this Agreement, the Parties have interpreted "confidential" to mean that the documents and other information provided during the course of the Settlement Conference, the discussion of each issue, the offers and counter-offers, and the negotiations leading to the settlement – or not – of each issue during the Settlement Conference are strictly privileged and without prejudice. None of the foregoing is admissible as evidence in this proceeding, or otherwise, with one exception, the need to resolve a subsequent dispute over the interpretation of any provision of this Settlement

Proposal. Further, the Parties shall not disclose those documents or other information to persons who were not attendees at the Settlement Conference. However, the Parties agree that "attendees" is deemed to include, in this context, persons who were not in attendance via video conference at the Settlement Conference but were a) any persons or entities that the Parties engage to assist them with the Settlement Conference, and b) any persons or entities from whom they seek instructions with respect to the negotiations; in each case provided that any such persons or entities have agreed to be bound by the same confidentiality provisions.

This Settlement Proposal provides a brief description of each of the settled and partially settled issues, as applicable, together with references to the evidence. The Parties agree that references to the "evidence" in this Settlement Proposal shall, unless the context otherwise requires, include (a) additional information included by the Parties in this Settlement Proposal; (b) the Appendices to this document; and (c) the evidence filed concurrently with this Settlement Proposal titled "Responses to Pre-Settlement Clarification Questions" ("Clarification Responses"). The supporting Parties for each settled issue, as applicable, agree that the evidence in respect of that settled or partially settled issue, as applicable, is sufficient in the context of the overall settlement to support the proposed settlement, and the sum of the evidence in this proceeding provides an appropriate evidentiary record to support acceptance by the OEB of this Settlement Proposal.

There are Appendices to this Settlement Proposal which provide further support for the proposed settlement. The Parties acknowledge that the Appendices were prepared by PUC. While the Intervenors have reviewed the Appendices, the Intervenors are relying on the accuracy of those Appendices and the underlying evidence in entering into this Settlement Proposal.

Outlined below are the final positions of the Parties following the Settlement Conference. For ease of reference, this Settlement Proposal follows the format of the final Approved Issues List for the Application attached to the Decision on Issues List dated October 27, 2022.

The Parties are pleased to advise the OEB that they have reached a complete agreement with respect to the settlement of all of the issues in this proceeding. Specifically:

| "Complete Settlement" means an issue for which complete settlement was reached by all Parties, and if this Settlement Proposal is accepted by the OEB, none of the Parties (including | settled: <b>ALL</b> |
|---|---------------------|
| Parties who take no position on that issue) will adduce any evidence or argument during the oral hearing in respect of the specific issue.  |                     |
| "Partial Settlement" means an issue for which there is partial settlement, as PUC and the Intervenors who take any position on  |                     |
| the issue were able to agree on some, but not all, aspects of the particular issue. If this Settlement Proposal is accepted by the OEB,   | None                |
| the Parties (including Parties who take no position on the Partial Settlement) will only adduce evidence and argument during the  |                     |
| hearing on the portions of the issue for which no agreement has been reached.   |                     |

| "No Settlement" means an issue for which no settlement was        | # issues not |
|---|--------------|
| reached. PUC and the Intervenors who take a position on the issue | settled:     |
| will adduce evidence and/or argument at the hearing on the issue. | None         |
|   |              |

According to the Practice Direction (p. 2), the Parties must consider whether a Settlement Proposal should include an appropriate adjustment mechanism for any settled issue that may be affected by external factors. These adjustments are specifically set out in the text of the Settlement Proposal.

The Parties have settled the issues as a package and none of the parts of this Settlement Proposal are severable. If the OEB does not accept this Settlement Proposal in its entirety, then there is no settlement (unless the Parties agree in writing that any part(s) of this Settlement Proposal that the OEB does accept may continue as a valid settlement without inclusion of any part(s) that the OEB does not accept).

In the event that the OEB directs the Parties to make reasonable efforts to revise the Settlement Proposal, the Parties agree to use reasonable efforts to discuss any potential revisions, but no Party will be obligated to accept any proposed revision. The Parties agree that all of the Parties who took a position on a particular issue must agree with any revised Settlement Proposal as it relates to that issue, or decide to take no position on the issue, prior to its resubmission to the OEB.

Unless stated otherwise, the settlement of any particular issue in this proceeding and the positions of the Parties in this Settlement Proposal are without prejudice to the rights of Parties to raise the same issue and/or to take any position thereon in any other proceeding, whether or not PUC is a party to such proceeding.

Where in this Settlement Proposal, the Parties "accept" the evidence of PUC, or the Parties or any of them "agree" to a revised term or condition, including a revised budget or forecast, then unless the Settlement Proposal expressly states to the contrary, the words "for the purpose of settlement of the issues herein" shall be deemed to qualify that acceptance or agreement.

## 1.0 Planning

# 1.1 Capital

Is the level of planned capital expenditures appropriate and is the rationale for planning and pacing choices appropriate and adequately explained, giving due consideration to:

- customer feedback and preferences
- productivity
- benchmarking of costs
- reliability and service quality
- impact on distribution rates
- trade-offs with OM&A spending
- government-mandated obligations
- the objectives of PUC Distribution Inc. and its customers
- the distribution system plan
- the business plan

**Complete Settlement:** The Parties agree that PUC will reduce its capital expenditures in the 2023 Test Year by \$750,000 and reduce 2022 bridge year capital additions by \$1.2 million.

The total net capital expenditures and gross capital additions in the 2023 Test Year shall, respectively, be \$6.3 million and \$6.8 million, as further detailed in Table 1.1A and Table 1.1B below. Table 1.1B below shows a variance of \$3,940,371 from the applied for net capital expenditures. This variance includes both the reduction in \$750,000 in capital expenditures plus the removal of the SSG Project from the capital expenditures.

Table 1.1A
Summary of Capital Expenditures (Excluding SSG Project)

| CATEGORY                 | 2022 Bridge | 2023 Test Year    |
|--------------------------|-------------|-------------------|
| CATEGORI                 | Year        | (Forecast) \$'000 |
| System Access            | 2,035       | 2,339             |
| System Renewal           | 7,129       | 4,356             |
| System Service           | -           |                   |
| General Plant            | 55          | 150               |
| TOTAL EXPENDITURE        | 9,219       | 6,845             |
| Capital Contributions    | 511         | 593               |

|              |                   | 1980 System Supervisory Equipment   | \$387,684    | \$387,684       | \$0        | \$0         | (\$387,684)   |
|              |                   | Contributed Capital                 | (\$592,500)  | (\$592,500)     | \$0        | (\$592,500) | \$0           |
|              | Net Capital Exper | nditures                            | \$10,113,371 | \$10,193,371    | \$80,000   | \$6,253,000 | -\$3,940,371  |

PUC also agrees as part of its next DSP to be filed with its next rebasing application:

- (a) Asset Replacement Information: PUC will provide details on both the planned and actual number of assets replaced over the historical period, as well as a forecast of planned assets to be replaced over the5-year DSP forecast period. The number of assets replaced, or planned to be replaced, by PUC shall be broken down on an annual basis by major asset type. For 2023, no forecast information will be provided.
- (b) Non-Test Year Material Capital Expenditure Information: PUC agrees to include in the next rebasing application specific information, which does not include material investment narratives, on capital expenditures for projects above the materiality threshold incurred during the IRM period that PUC seeks to add to rate base.

Based on the foregoing and the evidence filed by PUC, the Parties accept that the level of planned capital expenditures and the rationale for planning and pacing choices are appropriate and adequately explained, giving due consideration to:

- The customer feedback and preferences as more fully detailed in Exhibit 1 Section 1.5, Exhibit 1; Appendix K, L and M and Exhibit 2 Appendix C PUC Distribution System Plan Section 5.2.2.1;
- The past and planned productivity initiatives of PUC as more fully detailed in Exhibit 1, Appendix B PUC Distribution's 5year Business Plan and PUC's Interrogatory Response to OEB Staff 5;
- PUC's benchmarking performance as more fully detailed in Exhibit 1, Section 1.6;
- PUC's past reliability and service quality performance as more fully detailed in Exhibit 1 Section 1.6 and Exhibit 2, Appendix C PUC's Distribution System Plan, Section 5.2.3.2;
- The total impact on distribution rates as more fully detailed in Appendix D Bill Impacts Settlement to this Settlement Proposal;
- PUC's performance meeting government-mandated obligations as more fully detailed in the DSP;

- The settlement on OM&A as described under issue 1.2 of this Settlement Proposal;
- PUC's objectives and those of its customers as more fully detailed in Exhibit 1 Section 1.5, the chapter 2 appendices, 2-AC and exhibit 2 Appendix C PUC Distribution System Plan Section 5.2.2.1;
- PUC's DSP is as detailed in exhibit 2 Appendix C PUC Distribution System Plan; and
- PUC's business plan as more detailed in Exhibit 1, Appendix B PUC Distribution's 5 year Business Plan.

#### **Evidence:**

Application: - Exhibit 2 Section 2.1, 2.2.2 and Exhibit 2; Appendix C Distribution System Plan Section 5.2, 5.4 and Appendix C Material Invesment Narratives

*Clarification Responses*: 2-Staff-115 through 2-Staff-120, 4-Staff-125; 2-SEC-2 through 2-SEC-5; CCC-53; CCC-55

**Supporting Parties:** All

#### 1.2 OM&A

Is the level of planned OM&A expenditures appropriate and is the rationale for planning choices appropriate and adequately explained, giving due consideration to:

- customer feedback and preferences
- productivity
- benchmarking of costs
- reliability and service quality
- impact on distribution rates
- trade-offs with capital spending
- government-mandated obligations
- the objectives of PUC Distribution Inc. and its customers
- the distribution system plan
- the business plan

**Complete Settlement:** PUC agrees to reduce its proposed OM&A expenses (excluding LEAP and Property Tax) in the Test Year by \$550,000 to \$12,983,701. The Parties agree this represents an envelope approach approval for total OM&A and that PUC may make adjustments to its OM&A plans as it sees fit.

PUC notes that it has applied the \$550,000 reduction, in the tables throughout this settlement document and the live excel models, as an envelope adjustment.

As shown in Table 1.2A below, Total 2023 Settlement Test Year OM&A Expenses have increased by 15.4% compared to 2018 Actuals (representing a compound annual growth rate of 2.91%). Table 1.2B below is a Summary of OM&A expenses with changes since its original application.

# Table 1.2A Appendix 2-JA Summary of OM&A Expenses

Based on the foregoing and the evidence filed by PUC, the Parties accept the level of planned OM&A expenditures, and accept that the rationale for planning and pacing choices are appropriate and adequately explained, giving due consideration to:

- The customer feedback and preferences as more fully detailed in Exhibit 1 Section 1.5, Exhibit 1; Appendix K, L and M and Exhibit 2 Appendix C PUC Distribution System Plan Section 5.2.2.1;
- The past and planned productivity initiatives of PUC as more fully detailed in Exhibit 1, Appendix B PUC Distribution's 5year Business Plan and PUC's Interrogatory Response to OEB Staff 5;
- PUC's benchmarking performance as more fully detailed in Exhibit 1, Section 1.6;
- PUC's past reliability and service quality performance as more fully detailed in Exhibit 1 Section 1.6 and Exhibit 2, Appendix C PUC's Distribution System Plan, Section 5.2.3.2;
- The total impact on distribution rates as more fully detailed in Appendix D Bill Impacts Settlement to this Settlement Proposal;
- PUC's performance meeting government-mandated obligations as more fully detailed in the DSP;
- The settlement on OM&A as described under issue 1.2 of this Settlement Proposal;
- PUC's objectives and those of its customers as more fully detailed in Exhibit 1 Section 1.5, the chapter 2 appendices, 2-AC and exhibit 2 Appendix C PUC Distribution System Plan Section 5.2.2.1;
- PUC's DSP as detailed in exhibit 2 Appendix C PUC Distribution System Plan;
   and
- PUC's business plan as more detailed in as more detailed in Exhibit 1, Appendix B PUC Distribution's 5 year Business Plan.

## **Evidence:**

Application: Exhibit 4, Sections 4.1, 4.2, and 4.3

IRR's: 1-Staff-60 through 1-Staff-83; 4-VECC-27 through 4-VECC-35; 4-CCC-42 through 4-CCC-48; 4-SEC-23 through 4-SEC-30

Appendices to this Settlement Proposal: Appendix 2-JA\*, 2-K\*, 2-M\* \*PUC has used an envelope adjustment of (\$550,000) in these appendices to reflect the reduced settlement amount of OM&A.

Settlement Models: PUC\_2023\_Rev\_Reqt\_Workform\_SETTLEMENT\_FINAL; PUC\_2023\_Filing\_Requirements\_Chapter2\_Appendices\_SETTLEMENT\_FINAL

Clarification Responses: 1-Staff-112, 4-Staff-123, CCC-50, CCC-56

**Supporting Parties:** All

## 2.0 Revenue Requirement

2.1 Are all elements of the revenue requirement reasonable, and have they been appropriately determined in accordance with OEB policies and practices?

**Complete Settlement:** The Parties accept that the components of Base Revenue Requirement (See Table 2.2A below) on which they have reached settlement are reasonable and have been appropriately determine in accordance with OEB policies and practices. Specifically:

a) Rate Base (See Table 2.2B below): Subject to the adjustments expressly noted in this Settlement Proposal, the Parties accept that the rate base calculations have been appropriately determined in accordance with OEB policies and practices. See also section 1.1 above regarding the reductions in 2022 bridge year capital additions.

The Parties have agreed to the inclusion of the net book value for the Substation-16 Project, initially approved as an ICM in EB-2019-0170. The amount includes additional costs incurred as outlined in Exhibit 2 Table 2-24.

The Parties agreed that the entire SSG Project capital related costs are to be removed from the from 2023 rate base for the purposes of calculating 2023 test year revenue requirement. The SSG Project capital related costs are addressed in the SSG Project Recovery Mechanism in Issue 5.3 below.

- b) Working Capital (see Table 2.2B below): The Parties accept that the working capital calculations have been appropriately determined in accordance with OEB policies and practices. Tables 2.2B and 2.2C identify the agreed upon elements of the working capital and cost of power.
- c) Cost of Capital (see Table 2.2E below): The Parties agree the cost of capital parameters are appropriate and have been determined in accordance with OEB policies and practices. Table 2.2E provides the agreed upon elements of the cost of capital.

PUC has agreed to reduce the total debt by \$10,136,300 and apply that reduction to PUC's most recent debt, which is financing from Infrastructure Ontario. This will reduce PUC's weighted long-term debt to 4.31%. The parties have also agreed to use the OEB's Long Term debt rate of 4.88% on financing secured in 2023. Table 2.1A below show the 2023 Test Year Debt.

- d) Other Revenue (see Table 2.2G below): The Parties accept that the other revenue calculations have been appropriately determined in accordance with OEB policies and practices.
- e) Depreciation (see Table 2.2B below): The Parties accept that the depreciation calculations have been appropriately determined in accordance with OEB policies and practices. The depreciation calculations do not include SSG Project and related NRCan funding amounts for the SSG Project as the SSG Project and NRCan funding has been included in the SSG Project Recovery Mechanism.
- f) PILS (see Table 2.2F below): The Parties agree that the PILs calculations, excluding the SSG Project as updated to reflect this Settlement Proposal, have been appropriately determined in accordance with OEB policies and practices.

The Parties agree that the PILs calculations reflect a 5-year smoothing method for capital cost allowance (CCA) based on 2023 capital additions, excluding the SSG Project.

All tax loss carry forwards have been dealt with in section 4.3 below.

g) Loss Factors: The Parties accept that the loss factors have been appropriately determined in accordance with OEB policies and practices. See settlement on Issue 3.1 below.

#### **Evidence:**

Application: Exhibit 2 Sections 2.1 through 2.8; Exhibit 4 Section 4.1 and 4.2; Exhibit 5 Sections 5.1 and 5.2; Exhibit 6 Sections 6.1, 6.2, and 6.3; Exhibit 8 Sections 8.2 through 8.8.

**Supporting Parties:** All

2.2 Has the revenue requirement been accurately determined based on these elements?

**Complete Settlement:** The Parties agree that the revenue requirement has been accurately determined based on these elements.

The elements of Revenue Requirement are detailed in Tables 2.2A to 2.2G below.

Table 2.2A Revenue Requirement

## 3.0 Load Forecast, Cost Allocation and Rate Design

Are the proposed load and customer forecast including the application of Conservation and Demand Management savings, loss factors, and resulting billing determinants appropriate, and, to the extent applicable, are they an appropriate reflection of the energy and demand requirements of PUC Distribution Inc.'s customers?

**Complete Settlement:** Subject to the adjustments expressly noted in this Settlement Proposal, the Parties agree that the customer forecast including the application of Conservation and Demand Management savings, loss factors, and resulting billing determinants are an appropriate reflection of the energy and demand requirements of PUC's customers.

The Parties accept that PUC will adjust its load forecast trend variable by holding it constant at its December 31, 2021 value and then only use 20% of the 2023 CDM adjustment. PUC has also agreed in its response to Interrogatories VECC-55 that the number of customer explanatory variable is insignificant and therefore has been removed.

The billing determinants are reproduced below as Table 3.1A:

Table 3.1A Billing Determinants

3.2 Are the proposed cost allocation methodology, allocations, and revenue-to-cost ratios appropriate?

**Complete Settlement:** The Parties accept that PUC's proposals on cost allocation methodology, allocations, and revenue-to-cost ratios are appropriate.

However, in terms of the load profiles used, while Parties agree to accept the demand allocators proposed by PUC for purposes of settlement as they are reasonable, there is no agreement that the methodology used to derive the values is appropriate.

The revenue-to-cost ratios are reproduced below in Table 3.2A.

Table 3.2A
Revenue to Cost Ratios

|                | Revenue to Cost Ratios | Proposed        |                       |                 |

3.3 Are PUC Distribution Inc.'s proposals, including the proposed fixed/variable splits, for rate design appropriate?

**Complete Settlement:** The Parties agree that PUC's proposals for rate design, including the proposed fixed/variable splits are appropriate.

For classes above minimum peak load carrying capability (PLCC), the Parties agree that that the current fixed rate remain unchanged. This includes both general service classes and unmetered scattered load (USL).

The fixed-variable splits and the resultant proposed fixed and variable charges are reproduced below in Tables 3.3A and 3.3B.

Table 3.3A Fixed Variable Split

|                |                     |                 |                 | Fixed        | Variable     |             |

# **3.4** Are the proposed Retail Transmission Service Rates appropriate?

**Complete Settlement:** The Parties agree that the proposed Retail Transmission Service Rates are appropriate. For clarity, the Retail Transmission Service Rates only include the Network Service Rate of Rate Schedule Provincial Transmission Service. The Transformation Connection Service Rate and Line Connection Service Rate do not apply as PUC owns the transformation stations connected to Hydro One's network.

The Retail Transmission Service Rates have been reproduced below in Table 3.4A.

Table 3.4A
Retail Transmission Service Rates (RTSR)

| Rate Class             | Proposed RTSR |
|------------------------|---------------|
| Nate Class             | Network Rate  |
| Residential            | 0.0092        |
| GS<50                  | 0.0086        |
| GS>50                  | 3.4567        |

4.2 Are PUC Distribution Inc.'s proposals for deferral and variance accounts, including the balances in the existing accounts and their disposition, requests for new accounts, requests for discontinuation of accounts, and the continuation of existing accounts, appropriate?

Complete Settlement: Subject to the adjustments expressly noted in this Settlement Proposal, the Parties agree that PUC's proposals for deferral and variance accounts, including the balances in the existing accounts and their disposition, discontinuation of accounts, continuation of existing accounts, and establishment of new accounts are appropriate.

The Parties agree to the following:

- 1. Account 1509 Impacts Arising from the COVID-19 Emergency The Parties agreed to a disposition of the revised account balance and carrying charges of \$326,141 as of December 31, 2021. As compared to the pre-filed amount requested for disposition, the Parties agreed to exclude the 2021 amount of \$50,239 from disposition as it did not reach the materiality threshold. The Parties also agreed to exclude \$26,654 in the 2020 amount for executive labour costs associated with the COVID-19 emergency. The account will be closed upon disposition.
- 2. Account 1592 PILs and Tax Variance, Sub-account CCA Changes The Parties agree that the balance as at December 31, 2022 in Account 1592 will be refunded to ratepayers through the Tax Loss Carry Forward Rate Rider as noted in section 4.3.

The test year PILs calculations reflect a 5-year smoothing method of CCA (see section 2.1F). Therefore, no new entries will be recorded in Account 1592, PILs and Tax Variances, Sub-account CCA Changes, subsequent to December 31, 2022, unless there are further changes to the current tax laws and rules governing CCA, not contemplated in the current proceeding, or if the OEB orders otherwise.

PUC will only utilize Account 1592 - PILs and Tax Variances, Sub-account CCA Changes to record the impact of any further changes of the current tax laws and rules governing CCA from the CCA rules that are currently anticipated for the phase out of accelerated CCA. For greater certainty, it is the intention of the Parties that if the accelerated CCA is continued past its scheduled expiry date, a credit will be booked for the benefit of ratepayers, to be returned to them in accordance with the OEB's policies for deferral and variance account dispositions.

- 3. Account 1508 Sub-account Substation SSG ICM The Parties have agreed to a rate rider refund to customers based on the ICM true-up calculation presented in Table 5.3B. The sub-accounts related to the SSG ICM will be transferred to the appropriate accounts and closed. The treatment of SSG Project moving forward is discussed in the SSG Project Recovery Mechanism under Issue 5.3.
- 4. Account 1508 Sub-account Substation 16 ICM For the purposes of the ICM true up calculation, the Parties agreed that the half year rule will apply in the first year of the ICM and that the first year was 2021, instead of 2020, to reflect the year the

Substation 16 Project actually went in-service. The Parties have agreed to a rate rider refund to customers based on the ICM true-up calculation presented in Table 5.2B. The sub-accounts related to the Substation 16 ICM will be transferred to the appropriate accounts and closed.

- 5. Account 1508 Sub-account SSG Project Recovery Mechanism Variance Account A new DVA account will be created for the period of May 1, 2023 to April 30, 2028 to record an asymmetrical true-up for the recovery of the SSG Project during this time, to the benefit of ratepayers. PUC's net recovery for the SSG Project after considering this sub-account will be the lower of
  - a. total rate riders collected from May 1, 2023 to April 30, 2028
  - b. the sum of 2023 to 2027 revenue requirements, where the annual revenue requirement is the lower of i) the recalculated revenue requirement based on actual SSG Project capital costs and in-service dates, and ii) the settled forecasted revenue requirement used to calculate the SSG Recovery Mechanism Rate Rider.

The full details of the sub-account are further outlined in the "2023 Cost of Service Accounting Order – SSG Project Recovery Mechanism Variance Account" provided in Appendix I.

- 6. Account 1508 Sub-account Incremental VVO Costs or Savings– A new DVA account will be created to record incremental VVO savings or costs to customers in a given year. These savings or costs will be dependent on the VVO percentage savings achieved as measured against the target of 2.7%, as outlined in "2023 Cost of Service Accounting Order –Sault Smart Grid Project VVO Linkage to ROE" provided in Appendix G.
- 7. Account 1508 Sub-account EPC Contract Liquidated Damages A new DVA account will be created to record the revenue requirement impact of any liquidated damages received by PUC for the SSG so that the reduction to the settled upon SSG revenue requirement resulting from liquidated damages is returned to ratepayers. The details are as outlined in "2023 Cost of Service Accounting Order SSG EPC Contract Liquidated Damages" provided in Appendix H.
- 8. The amounts for disposition in the following accounts include 2022 forecasted principal amounts. Some of these accounts will be subsequently closed, effective May 1, 2023 as noted in Table 4.2C of this settlement proposal.
  - a. Pole attachment variance (Account 1508);
  - b. Retail Cost Variance Account Retail (Account 1518);
  - c. Retail Cost Variance Account STR (Account 1548);
  - d. LRAMVA (Account 1568); and

- e. Impacts Arising from the COVID-19 Emergency (Account 1509).
- 9. The disposition period for all deferral and variance accounts will be 12 months.

Table 4.2A below sets out the Deferral and Variance Account balances as updated to reflect this Settlement Proposal. Table 4.2B below details proposed rate riders. Table 4.2C below includes a listing of the DVAs that are continuing/discontinuing as of the effective date.

#### **Evidence:**

*Application*: Exhibit 1 Section 1.2.7, Section 1.10; Exhibit 2 Section 2.8, Exhibit 3 Section 3.1.2 and Exhibit 9 in its entirety

*IRRs*: 2-Staff-19, 2-Staff-20, 2-Staff-29, 4-Staff-64, 4-Staff-81 through 4-Staff-83, 6-Staff-88, 6-Staff-89, 9-Staff-102 through 9-Staff-111; VECC-52 through VECC-54; SEC-9, SEC-16, SEC-24, SEC-25, SEC-34, and SEC-36; Appendix IR5 2023 COS Accounting Order – SSG VVO Linkage

Appendices to this Settlement Proposal: Appendix G 2023 COS Accounting Order – SSG VVO Linkage Appendix H 2023 COS Accounting Order – SSG Liquidated Damages Appendix I 2023 COS Accounting Order – SSG Custom IR Rate Rider Revenue

Settlement Models:

PUC\_2023\_DVA\_Continuity\_Schedule\_SETTLEMENT\_FINAL; PUC\_2023\_GA\_Analysis\_Workform\_SETTLEMENT\_FINAL;

Clarification Responses: 6-Staff-127, 9-Staff-129 through 9-Staff-133; SEC-8; Appendix F – 2023 DVA Accounting Order – SSG Foregone Revenue

**Supporting Parties:** All

Parties Taking No Position: None.

**4.3** *Is the proposed rate rider for the refund of Tax Loss Carry Forwards appropriate?* 

Complete Settlement: The Parties agree that the cumulative impact of accelerated CCA (including the impact from 2022 projected SSG assets additions of \$9,026,457 as noted below) as at December 31, 2022 that would have been recorded in Account 1592, Subaccount CCA Changes is captured in the total Tax Loss Carry Forwards instead of Account 1592. The Parties also agreed to refund the revenue requirement impact of the Tax Loss Carry Forwards through a rate rider.

PUC's projected tax loss carry forwards at the end of 2022 bridge year is \$1,209,270 as shown in Table 4.3A below. This amount is then adjusted for the two ICMs that PUC completed in 2021 for Substation 16 and 2022 for the SSG project.

The 2021 ICM for Substation 16 came into service in 2021 and therefore formed part of PUC's capital additions in 2021 that was included in its 2021-year end tax returns. Therefore, the full accelerated CCA for Substation 16 is captured in PUC's 2022 projected loss carry forwards total of \$1,209,270. Since PUC completed a true up calculation in which \$155,790 of CCA in each of 2021 and 2022 is included in the computation of the ICM true up calculation, this amount needs to be a deduction from the \$1,209,270 as shown in the table 4.3A below.

The 2022 tax loss carry-forward of \$1,209,270 excludes the impact of the CCA from the SSG Project. PUC estimated that \$9,026,457 of SSG Project asset additions would be completed in 2022, and would result in accelerated CCA deductions of \$1,083,175. Of this amount, \$361,058 was included in the calculation of PILs in the SSG ICM true-up, and the remaining \$722,117 is to be included in the Tax Loss Carry Forwards, as shown in Table 4.3A. Table 4.3B summarizes the calculation relating to SSG Project CCA.

**Table 4.3A: Tax Loss Carry Forwards** 

|                                   | 2022 Year End Tax Los |           | Sub 16 |            |    | SSG        |    |           |

5.3 Are the amounts proposed for inclusion in rate base for the Incremental Capital Module approved in EB-2018-0219/EB-2020-0249 and the proposed treatment of the associated true-up appropriate?

#### **Complete Settlement:**

As part of the pre-settlement clarification responses, PUC revised its 2022 SSG Project cost estimate due to the delay in completion of the project. As set out below, the Parties have agreed to the revised value for the SSG Project, comprised of 2022 net book value and 2023 capital additions, that until its next rebasing application will be recovered outside of base rates through the SSG Project Recovery Mechanism.

Table 5.3B below shows the ICM True-up Calculations for the SSG Project and the differences in amounts between the ICM decision EB-2018-0219/EB-2020-0249, Application and Interrogatories and the amounts agreed to by the Parties during settlement. A large portion of the 2022 capital work is being completed in 2023, it has resulted in a \$485,488 refund to customers for the ICM true-up calculation.

Table 5.3B ICM True-Up Calculations (Sault Smart Grid – EB-2018-0219/EB-2020-0249)

| ICM Desision |   |  |
|--------------|---|--|
| ICM Decision | Application &   | Settlement: 2022   |

#### Sault Smart Grid Project Recovery Mechanism ("SSG Project Recovery Mechanism")

On April 29, 2021, PUC received approval from the OEB for the amended and restated Incremental Capital Module ("ICM") application for new rates effective May 1, 2022 in EB-2020-0249/EB-2018-0219. The Sault Smart Grid Project ("SSG Project") is a proposed community wide smart grid which will cover PUC's entire service territory. The SSG Project is expected to transform PUC's entire distribution system through an integrated project implementing various technologies such as Voltage/VAR Optimization, Distribution Automation and Advanced Metering Infrastructure.

The SSG Project carries a total net capital spend of \$24.5 million and represents approximately 1/4<sup>th</sup> of PUC's total rate base. The SSG Project was initially expected to be fully completed and in

service by December 31, 2022, however due to unforeseen circumstances<sup>2</sup> PUC updated the estimate of project spending during the pre-settlement clarification responses which outlined a net project spend of \$9M in 2022 and the remaining \$15.5M in 2023. The 2023 SSG Project additions represents 14.6% of PUC's average net fixed assets.

In its pre-settlement clarification responses, PUC also brought forth an SSG Foregone Revenue Requirement Accounting Order intended to make PUC whole for the revenue requirement on the \$15.5 million of 2023 SSG additions due to application of the half-year rule to additions placed in service in the test year. Without the proposed account, PUC noted that it would be foregoing revenue requirement each year which could put the utility in an under earnings situation beginning in 2024 and substantially impair its cash flow. The Parties agreed that some form of mechanism was required to help PUC make up some of the shortfall in revenue requirement as a result of the SSG Project delay given its size and the fact the OEB has approved the project.

The SSG Project Recovery Mechanism is of unprecedented nature and one of a kind considering the large value the SSG Project itself, which was previously approved as ICM in EB-2020-0249/EB-2018-0219. The Parties agreed that the SSG Project Recovery Mechanism is not meant to be precedent and is being agreed to in the context of a full settlement, and is appropriate because of the SSG Project size, unique circumstances related to the project delay, and the previous approvals in EB-2020-0249/EB-2018-0219.

As noted above, it was agreed upon between PUC and intervenors that some mechanism was required to allow PUC to recover the revenue requirement for the \$15.5 million 2023 investment in the SSG Project as a result of delays PUC incurred in completing all SSG capital additions in 2022. The Parties agreed to the SSG Project Recovery Mechanism, which removes the entire SSG Project (comprised of 2022 net book value and 2023 capital additions) from PUC's rate base and calculates separate rate riders to recover the SSG revenue requirement until rebasing in 2028. The SSG Model shows the revenue requirement components including depreciation, PILs with the associated CCA (excluding 2022 CCA on 2022 additions which has been captured in the tax loss carry forwards and the ICM true-up calculation), and Return on Rate Base. The model then uses the 2023 Cost of Service Rate Application information (as adjusted by any relevant agreed upon changes in this settlement proposal) to allocate revenue requirement to each rate class and the same Fixed/Variable split for calculating the rate riders to be collected from customers. The following describes each component in detail.

- 1) SSG Project In Service Additions For the purposes of calculating the rate rider, PUC will use a net project spend of \$9,026,457 for 2022 in service additions and \$15,521,823 for 2023 in service additions.
- **2) Depreciation** A straight line method is used for calculating depreciation which is in line with current PUC practices. 2023 Depreciation will be on a half year basis for the 2023 in service additions and full year basis for the 2022 in-service additions. In years 2024-2027 depreciation is

<sup>&</sup>lt;sup>2</sup> For further explanation, please refer to Pre-Settlement Clarification Question CCC-55 in Appendix F.

set at an amount of \$687,641/year. The depreciation total is net of amortization of contributed capital.

3) CCA - The CCA calculation tab calculates actual CCA in each respective year to reflect the amount of CCA that PUC would deduct from its taxable income on its tax return from 2022 (the first year where there is CCA on the SSG Project) to 2027. The 2022 CCA is excluded from the SSG Recovery Mechanism as it has been accounted for through other mechanisms. In 2022, PUC will deduct approximately \$1,083,675 in CCA. Of this amount, \$361,075 has already been included as a deduction in the PILs of the ICM true up calculation outlined above. The remaining \$722,117 has been included in PUC's tax loss carry forward total that is to be refunded to customers as outlined in Issue 4.3 above. Therefore, the SSG Project Recovery Mechanism only considers the 2023 to 2027 PILs impact. Table E summarizes the total CCA for the SSG Project and where the amounts have been allocated.

**Table E – CCA Calculation for SSG Project** 

| Total CCA from 2022 to 2027                             | 9,527,652 |
|---|-----------|
| 2022 CCA included in ICM True up                        | 361,058   |
| 2022 CCA included in tax loss carry forward refund      | 722,117   |
| Revised Total of CCA for SSG Project Recovery Mechanism | 8,444,477 |
| Smoothed Yearly   | 1,688,895 |

It has been agreed upon that the 2022-2027 aggregate of \$8,444,477 will be smoothed across 2023-2027 to help balance the impacts of accelerated CCA.

- **4) Cost of Capital Parameters** The parties have agreed to use PUC's 2023 cost of capital parameters for calculating the return on rate base.
- **5) Incremental Revenue Requirement** The yearly incremental revenue requirement to calculate the basis of the rate rider is presented in Table F below.

Table F: Yearly Revenue Requirement<sup>1</sup>

|  | <br>            |    |           |    |           |    |           |    |           |  |
|--|-----------------|----|-----------|----|-----------|----|-----------|----|-----------|--|
| Incremental Revenue Requirement          | 2023            |    | 2024      |    | 2025      |    | 2026      |    | 2027      |  |
| Return on Rate Base - Total              | \$<br>1,042,866 | \$ | 1,498,849 | \$ | 1,455,189 | \$ | 1,411,530 | \$ | 1,367,870 |  |
| Amortization Expense - Total             | \$<br>470,691   | \$ | 687,641   | \$ | 687,641   | \$ | 687,641   | \$ | 687,641   |  |
| Grossed-Up Taxes/PILs                    | \$<br>(217,497) | \$ | (42,332)  | \$ | (51,615)  | \$ | (60,897)  | \$ | (70,179)  |  |
|  |                 |    |           |    |           |    |           |    |           |  |
|  |                 |    |           |    |           |    |           |    |           |  |
| Incremental Revenue Requirement with CCA | \$<br>1,296,060 | \$ | 2,144,158 | \$ | 2,091,216 | \$ | 2,038,274 | \$ | 1,985,332 |  |

- 1 The calculation of 2024-2027 revenue requirement will change once the SSG Project actual spending is reconciled.
- 6) Rate Design PUC is proposing to collect SSG revenue requirement from customers in the same proportion as distribution revenue collected as from customers pursuant to the Settlement Proposal. The percentage allocations are shown in the Table G below reflect the as settled revenue requirement percentages that are applicable to the SSG Project.

Table G - Rate Design

| Customer Class          | Rev Requirement % |
|-------------------------|-------------------|
| Residential             | 60.2%             |
| GS < 50 kW              | 15.8%             |
| GS >50 to 4,999 kW      | 22.6%             |
| Street Lighting         | 1.0%              |
| Sentinel Lighting       | 0.2%              |
| Unmetered and Scattered | 0.2%              |
| Total                   | 100.0%            |

7) Fixed/Volumetric Split – PUC is proposing a fixed/volumetric split that matches the splits agreed to in this Settlement Proposal for distribution revenue, as presented in Table H below for the 2023 Rate Year

Table H - Fixed/Volumetric Split

| 2023                    |                                |                               |    |                       |                  |         |  |  |  |
|-------------------------|--------------------------------|-------------------------------|----|-----------------------|------------------|---------|--|--|--|
| Customer Class          | Current<br>Volumetric<br>Split | Current Fixed<br>Charge Split | ١  | /olumetric<br>Revenue | Fixed<br>Revenue |         |  |  |  |
| Residential             | 0%                             | 100%                          | \$ | 45                    | \$               | 779,792 |  |  |  |
| GS < 50 kW              | 75%                            | 25%                           | \$ | 154,073               | \$               | 50,854  |  |  |  |
| GS >50 to 4,999 kW      | 90%                            | 10%                           | \$ | 264,746               | \$               | 28,416  |  |  |  |
| Street Lighting         | 33%                            | 67%                           | \$ | 4,398                 | \$               | 9,009   |  |  |  |
| Sentinel Lighting       | 58%                            | 42%                           | \$ | 1,284                 | \$               | 924     |  |  |  |
| Unmetered and Scattered | 91%                            | 9%                            | \$ | 2,335                 | \$               | 229     |  |  |  |
| Total                   |                                |                               | \$ | 426,880               | \$               | 869,224 |  |  |  |

- 8) 2028 COS True up Calculation— The SSG Project Recovery Mechanism will be subject to an asymmetrical true-up mechanism for the period of May 1, 2023 to April 30, 2028, to the benefit of ratepayers, that will be tracked in the new variance account, Account 1508, Sub-account SSG Project Recovery Mechanism Variance Account. PUC's net recovery for the SSG Project during this period after considering this sub-account will be the lower of
  - a. total rate riders collected from May 1, 2023 to April 30, 2028
  - b. the sum of 2023 to 2027 revenue requirements, where the annual revenue requirement is the lower of i) the recalculated revenue requirement based on actual SSG Project capital costs and in-service dates, and ii) the settled forecasted revenue requirement used to calculate the SSG Recovery Mechanism Rate Rider.

The full details of the true up calculation is outlined in Accounting Order attached as Appendix I – 2023 Cost of Service Application – The Sault Smart Grid Project Recovery Mechanism Variance Account.

As the revenue requirement included in the SSG Project Recovery Mechanism is intended to allow recovery of the costs of the SSG Project set out in Table D.1 above, but through a different recovery

mechanism than if the amount had been included in base rates, the Parties agree that PUC will make appropriate adjustments in its historical fixed assets continuity schedules so that the remaining net book value of the SSG Project related costs that should be added to PUC's rate base at its next rebasing is equal to the actual costs up to a maximum of the forecasted costs in Table D.1 under the Summary section. Any increase in costs from what has been forecasted in Table D.1, which will not be recovered through the SSG Project Recovery Mechanism, will be subject to a prudence review, if PUC seeks to add that additional amount to rate base at its next rebasing.

#### **Evidence:**

Application: Exhibit 1 Section 1.2.3, Exhibit 2 Section 2.2 and 2.8

IRRs: 2-Staff-13, 2-Staff-14, 2-Staff-17 through 2-Staff-20, 2-Staff-24 through 2-Staff-29; VECC-2 through VECC-9, VECC-54; CCC-16, CCC-17; SEC-7, SEC-9 and SEC-10

Appendices to this Settlement Proposal: Appendix B – Updated Appendix 2-AB: Capital Expenditure Summary

Settlement Models: PUC 2023 DVA Continuity Schedule SETTLEMENT FINAL

Clarification Responses: 2-Staff-119, 2-Staff-120, 9-Staff-130; SEC-2, CCC-55

**Supporting Parties:** All

Parties Taking No Position: None.

5.4 Has PUC Distribution Inc. responded appropriately to the OEB's directions/orders from its stand-alone Incremental Capital Module application relating to the Sault Smart Grid Project (EB-2018-0219/EB-2020-0249)?

**Complete Settlement:** Subject to the adjustments expressly noted in this Settlement Agreement, the Parties agree that PUC responded appropriately to the OEB's directions and orders from its stand-alone Incremental Capital Module application relating to the SSG Project (EB-2018-0219/EB-2020-0249).

At page 38 of Exhibit 1 PUC summarized the list of commitments in relation to the SSG Project (EB-2018-0219/EB-2020-0249). The outstanding commitments that are addressed in this settlement proposal are are set out below in Table 5.4A

Table 5.4A: List of Outstanding Prior Commitments Related to SSG Project

|    | Tuble 3. III. List of Outstain  |  | intilients Related to 55G Froject  |
|----|---|--|--|
|    | Action Item   | File # and<br>Reference                | Completion   |
| 8  | PUC Distribution shall provide a detailed report as part of its next rebasing application, which compares the SSG project costs, and benefits as implements to what was forecast in this application  | EB-2020-0249 EB-2018-0219 pg. 24       | PUC has updated the customer net benefit table and sensitivity analysis based on the most recently readily available information (COP rates, Cost of Capital Parameters) in the DSP as part of Section 5.3.6.2.2.  This report will be filed on the record of this proceeding concurrent with commitment 10, namely within 18 months after project completion.  As detailed below, PUC will also provide a third-party report reviewing the VVO consumption savings methodology PUC has adopted. |
| 9  | PUC Distribution shall file all available information on the proposed Project performance metrics that it intends to track, along with proposed targets, in its next rebasing application. This shall include an appropriate metric and targets to symmetrically link the VVO performance of the Project to PUC's allowable ROE for this project. | EB-2020-0249 EB-2018-0219 pg. 11 & 24  | The Parties accept the proposed performance metrics table within "Appendix H_Sault Smart Grid_Performance Metrics_OEB Order No. 6_20221026" filed October 26, 2023 included at Appendix J of this Settlement Proposal and the methodology for connecting the VVO Savings and PUC's allowable ROE set out in Appendix G of this Settlement Proposal.  As detailed below, PUC will provide a third-party report reviewing the VVO consumption savings methodology PUC has adopted.                 |
| 10 | PUC Distribution shall post on its public website a report, within 18 months of Project completion, and with annual updates for 10 years thereafter which shows the actual benefits   | EB-2020-0249<br>EB-2018-0219<br>pg. 24 | The parties agreed PUC will post annual updates at the same time as RRR filing deadline of April 30 <sup>th</sup> yearly. The first report will be provided within 18 months of project completion and then yearly by April 30 <sup>th</sup> , thereafter.   |

|    | of the SSG Project, broken down by customer class.   |                                  |   |
|----|--|----------------------------------|---|
| 11 | Any EPC Contract liquidated damages resulting from "performance" or "delay" shall be used to reduce the Project capital cost and would be settled at the time of the next rebasing | EB-2020-0249 EB-2018-0219 pg. 24 | At this current time, there are no liquidated damages expected. If liquidated damages occur after the filing of this application, but before any decision is received, PUC is recommending revising the application information accordingly. If liquidated damages occur after the resulting decision, PUC is recommending the use of a DVA account to record the variance in revenue requirement as a result of the number of liquidated damages. The damages would be treated as contributed capital, thus reducing the net book value of the assets in rate base. The Parties agree that PUC responded appropriately to this OEB direction by creating the liquidated damages DVA as outlined in Appendix H. |

PUC agrees to roll over commitment 8 and 10 in line with the timing of commitment 10, which is within 18 months after SSG Project completion.

In fulfilment of commitment 8, PUC will file a detailed report which compares the SSG project costs and benefits, as implemented, to what was forecast in the ICM application at the same time as commitment 10. This report will be filed on the record of this proceeding (EB-2022-0059).

PUC agrees to retain one or more independent third-parties to undertake a review of the VVO savings from the SSG Project, to be filed as part of commitment 9 and in PUC's next rebasing, that specifically includes:

- (a) A review of the VVO consumption savings methodology PUC has adopted as outlined in the filing in OEB Proceeding EB-2022-0059 dated October 26, 2022 and titled "Appendix H\_Sault Smart Grid\_Performance Metrics\_OEB Order No. 6\_20221026" (the "on-off" methodology from IEEE 1885-2022), the other consumption savings methodologies included in IEEE 1885-2022, and any other generally accepted consumption savings methodologies that may exist, and report on whether the selected methodology is the most appropriate and why.
- (b) Based on the methodology that PUC has adopted as outlined in the filing in OEB Proceeding EB-2022-0059 dated October 26, 2022 and titled "Appendix H\_Sault Smart Grid\_Performance Metrics\_OEB Order No. 6\_20221026" (the "on-off" methodology from IEEE 1885-2022), a review to determine if it has calculated the savings correctly.

(c) Using actual consumption data, a review to determine if the estimated savings based on the PUC methodology outlined in the filing in OEB Proceeding EB-2022-0059 dated October 26, 2022 and titled "Appendix H\_Sault Smart Grid\_Performance Metrics\_OEB Order No. 6\_20221026" (the "on-off" methodology from IEEE 1885-2022), reflects a reasonable level of actual savings for customers.

As part of Commitment 9 in Table 5.4A above from EB-2020-0249/EB-2018-0219, PUC was directed to file all available information on the SSG Project performance metrics that it intends to track, along with proposed targets, in this rebasing application. The OEB stated this shall include an appropriate metric and targets to symmetrically link the VVO performance of the SSG Project to PUC's allowable return on equity ("ROE") for the SSG Project.

The Parties agree to the creation of the new Account 1508, Sub-account Incremental VVO Savings or Costs for the calculation of the VVO savings to ROE linkage. If PUC achieves VVO savings that is above or below the target value of 2.70%, it will symmetrically collect or refund the percentage difference of its ROE on the SSG Project in that respective year in accordance with the detailed methodology set out in Accounting Order at Appendix G, including the discretion a future hearing panel has regarding account disposition.

#### **Evidence:**

Application: Exhibit 1 Section 1.3.10, Exhibit 2 Section 2.8, Exhibit 2 Appendix C – PUC Distribution System Plan Section 5.3.6; Exhibit 9 Appendix B – Accounting Order – Sault Smart Grid\_Voltage\_VAR Optimization Linkage to Return on Equity; Exhibit 9 Appendix C – Accounting Order – Sault Smart Grid\_EPC Contract Liquidated Damages, "Appendix H\_Sault Smart Grid\_Performance Metrics OEB Order No. 6 20221026" filed October 26, 2023

The RRWF has been enhanced commencing with 2017 rate applications to provide estimated base distribution rates. The enhanced RRWF is not intended to replace a utility's formal rate generator model which should continue to be the source of the proposed rates as well as the final ones at the conclusion of the proceeding. The load forecasting addition made to this model is intended to be demonstrative only and does not replace the information filed in the utility's application. In an effort to minimize the incremental work required from utilities, the cost allocation and rate design additions to this model do in fact replace former appendices that were required to be filed as part of the cost of service (Chapter 2) filing requirements.

This Workbook Model is protected by copyright and is being made available to you solely for the purpose of filing your application. You may use and copy this model for that purpose, and provide a copy of this model to any person that is advising or assisting you in that regard. Except as indicated above, any copying, reproduction, publication, sale, adaptation, translation, modification, reverse engineering or other use or dissemination of this model without the express written consent of the Ontario Energy Board is prohibited. If you provide a copy of this model to a person that is advising or assisting you in preparing the application or reviewing your draft rate order, you must ensure that the person understands and agrees to the restrictions noted above.

While this model has been provided in Excel format and is required to be filed with the applications, the onus remains on the applicant to ensure the accuracy of the data and the results.

## Notes:

General Data inputs are required on Sheets 3. Data from Sheet 3 will automatically complete calculations on sheets 4 through 9 (Rate Base through Revenue Requirement). Sheets 4 through 9 do not require any inputs except for notes that the Applicant may wish to enter to support the results. Pale green cells are available on sheets 4 through 9 to enter both footnotes beside key cells and the related text for the notes at the bottom of each sheet.

- All inputs are in dollars (\$) except where inputs are individually identified as percentages (%)
- Data in column E is for Application as originally filed. For updated revenue requirement as a result of interrogatory responses, technical or settlement conferences, etc., use column M and Adjustments in column I
- Net of addbacks and deductions to arrive at taxable income.
- Average of Gross Fixed Assets at beginning and end of the Test Year
- <sup>(5)</sup> Average of Accumulated Depreciation at the beginning and end of the Test Year. Enter as a negative amount.
- (6) Select option from drop-down list by clicking on cell M12. This column allows for the application update reflecting the end of discovery or Argument-in-Chief. Also, the outcome of any Settlement Process can be reflected.
- Input total revenue offsets for deriving the base revenue requirement from the service revenue requirement
- 4.0% unless an Applicant has proposed or been approved for another amount.
- (9) The default Working Capital Allowance factor is **7.5%** (of Cost of Power plus controllable expenses), per the letter issued by the Board on June 3, 2015. Alternatively, a WCA factor based on lead-lag study, with supporting rationale could be provided.

# Revenue Requirement Workform (RRWF) for 2023 Filers

## **Load Forecast Summary**

This spreadsheet provides a summary of the customer and load forecast on which the test year revenue requirement is derived. The amounts serve as the denominators for deriving the rates to recover the test year revenue requirement for purposes of this RRWF.

The information to be input is inclusive of any adjustments to kWh and kW to reflect the impacts of CDM programs up to and including CDM programs planned to be executed in the test year. i.e., the load forecast adjustments determined in **Appendix 2-I** should be incorporated into the entries. The inputs should correspond with the summary of the Load Forecast for the Test Year in **Appendix 2-IB** and in Exhibit 3 of the application.

Appendix 2-IB is still required to be filled out, as it also provides a year-over-year variance analysis of demand growth andf trends from historical actuals to the Bridge and Test Year forecasts.

<sup>(1)</sup> Input kW or kVA for those customer classes for which billing is based on demand (kW or kVA) versus energy consumption (kWh)

# Revenue Requirement Workform (RRWF) for 2023 Filers

## **Cost Allocation and Rate Design**

This spreadsheet replaces **Appendix 2-P** and provides a summary of the results from the Cost Allocation spreadsheet, and is used in the determination of the class revenue requirement and, hence, ultimately, the determination of rates from customers in all classes to recover the revenue requirement.

Stage in Application Process: Per Board Decision

### A) Allocated Costs

- (1) Class Allocated Revenue Requirement, from Sheet O-1, Revenue to Cost || RR, row 40, from the Cost Allocation Study in this application. This excludes costs in deferral and variance accounts. For Embedded Distributors, Account 4750 Low Voltage (LV) Costs are also excluded.
- (2) Host Distributors Provide information on any embedded distributor(s) as a separate class, if applicable. If embedded distributors are billed in a General Service class, include the allocated costs and revenues of the embedded distributor(s) in the applicable class, and also complete Appendix 2-Q.
- (3) Customer Classes If these differ from those in place in the previous cost allocation study, modify the customer classes to match the proposal in the current application as closely as possible.

<sup>(4)</sup> In columns 7B to 7D, LF means Load Forecast of Annual Billing Quantities (i.e., customers or connections, as applicable X 12 months, and kWh, kW or kVA as applicable. Revenue quantities should be net of the Transformer Ownership Allowance for applicable customer classes. Exclude revenues from rate adders and rate riders.

<sup>(5)</sup> Columns 7C and 7D - Column Total should equal the Base Revenue Requirement for each.

<sup>(6)</sup> Column 7C - The OEB-issued cost allocation model calculates "1+d" on worksheet O-1, cell C22. "d" is defined as Revenue Deficiency/Revenue at Current Rates.

<sup>(7)</sup> Column 7E - If using the OEB-issued cost allocation model, enter Miscellaneous Revenues as it appears on worksheet O-1, row 19,

## C) Rebalancing Revenue-to-Cost Ratios

| Name of Customer Class  | Previously Approved<br>Ratios | Status Quo Ratios | Proposed Ratios  | Policy Range |
|---|-------------------------------|-------------------|------------------|--------------|
|   | Most Recent Year:             | (7C + 7E) / (7A)  | (7D + 7E) / (7A) |              |
|   | <b>2018</b><br>%              | %                 | %                | %            |
| 1 Residential   | 92.62%                        | 95.81%            | 95.81%           | 85 - 115     |
| 2 GS<50   | 116.08%                       | 119.65%           | 119.65%          | 80 - 120     |
| 3 GS>50   | 111.07%                       | 101.27%           | 101.27%          | 80 - 120     |
| 4 Sentinel  | 97.22%                        | 92.89%            | 92.89%           | 80 - 120     |
| 5 Street Lights   | 120.00%                       | 87.14%            | 87.14%           | 80 - 120     |
| 6 Unmetered Scattered Load 7 8 9 10 11 12 13 14 15 16 17 18 19 20 | 112.71%                       | 101.90%           | 101.90%          | 80 - 120     |

<sup>(8)</sup> Previously Approved Revenue-to-Cost (R/C) Ratios - For most applicants, the most recent year would be the third year (at the latest) of the Price Cap IR period. For example, if the applicant, rebased in 2012 with further adjustments to move within the range over two years, the Most Recent Year would be 2015. However, the ratios in 2015 would be equal to those after the adjustment in 2014.

<sup>(9)</sup> Status Quo Ratios - The OEB-issued cost allocation model provides the Status Quo Ratios on Worksheet O-1. The Status Quo means "Before Rebalancing".

<sup>(10)</sup> Ratios shown in red are outside of the allowed range. Applies to both Tables C and D.

## (D) Proposed Revenue-to-Cost Ratios (11)

| Name of Customer Class   | Propose   | Proposed Revenue-to-Cost Ratio |         |              |  |  |  |  |  |  |  |
|--------------------------|-----------|--------------------------------|---------|--------------|--|--|--|--|--|--|--|
|                          | Test Year | Price Cap IR P                 | eriod   | Policy Range |  |  |  |  |  |  |  |
|                          |           | 1                              | 2       |              |  |  |  |  |  |  |  |
| Residential              | 95.81%    | 95.81%                         | 95.81%  | 85 - 115     |  |  |  |  |  |  |  |
| GS<50                    | 119.65%   | 119.65%                        | 119.65% | 80 - 120     |  |  |  |  |  |  |  |
| GS>50                    | 101.27%   | 101.27%                        | 101.27% | 80 - 120     |  |  |  |  |  |  |  |
| Sentinel                 | 92.89%    | 92.89%                         | 92.89%  | 80 - 120     |  |  |  |  |  |  |  |
| Street Lights            | 87.14%    | 87.14%                         | 87.14%  | 80 - 120     |  |  |  |  |  |  |  |
| Unmetered Scattered Load | 101.90%   | 101.90%                        | 101.90% | 80 - 120     |  |  |  |  |  |  |  |
|                          |           |                                |         |              |  |  |  |  |  |  |  |

<sup>(11)</sup> The applicant should complete Table D if it is applying for approval of a revenue-to-cost ratio in 2021 that is outside of the OEB's policy range for any customer class. Table D will show that the distributor is likely to enter into the 2022 and 2023 Price Cap IR models, as necessary. For 2022 and 2023, enter the planned revenue-to-cost ratios that will be "Change" or "No Change" in 2019 (in the current Revenue/Cost Ratio Adjustment Workform, Worksheet C1.1 'Decision - Cost Revenue Adjustment, column d), and enter TBD for class(es) that will be entered as 'Rebalance'.

# Revenue Requirement Workform (RRWF) for 2023 Filers

## Rate Design and Revenue Reconciliation

This sheet replaces Appendix 2-V, and provides a simplified model for calculating the standard monthly and voluemtric rates based on the allocated class revenues and fixed/variable split resulting from the cost allocation study and rate design and as proposed by the applicant. However, the RRWF does not replace the rate generator model that an applicant distributor may use in support of its application. The RRWF provides a demonstrative check on the derivation of the revenue requirement and on the proposed base distribution rates to recover the revenue requirement, based on summary information from a more detailed rate generator model and other models that applicants use for cost allocation, load forecasting, taxes/PILs, etc.

% Difference

-0.001%

<sup>1</sup> Transformer Ownership Allowance is entered as a positive amount, and only for those classes to which it applies.

The Fixed/Variable split, for each customer class, drives the "rate generator" portion of this sheet of the RRWF. Only the "fixed" and "variable" portions must sum to 100%. For a distributor that may set the Monthly Service Charge, the "fixed" ratio is calcutated as: [MSC x (average number of customers or connections) x 12 months] / (Class Allocated Revenue Requirement).

# Revenue Requirement Workform (RRWF) for 2023 Filers

## **Tracking Form**

The first row shown, labelled "Original Application", summarizes key statistics based on the data inputs into the RRWF. After the original applicant provides key changes in capital and operating expenses, load forecasts, cost of capital, etc., as revised through the processing of the application. This could be due to revisions or responses to interrogatories. The last row shown is the most current estimate of the cost of service data reflecting the original application and any updates provided by the applicant distributor (for updated evidence, responses to interrogatories, undertakings, etc.)

Please ensure a Reference (Column B) and/or Item Description (Column C) is entered. Please note that unused rows will automatically be hidden and the PRINT AREA set when the PRINT BUTTON on Sheet 1 is activated.

(1) Short reference to evidence material (interrogatory response, undertaking, exhibit number, Board Decision, Code, Guideline, Report of the Board, etc.)

### Notes to the Table:

1. Historical "previous plan" data is not required unless a plan has previously been filed. However, use the last OEB-approved, at least on a Total (Capital) Expenditure basis for the last cost of service rebasing year, and the applicant should include their planned budget in each subsequent historical year up to and including the Bridge Year.

2. Indicate the number of months of 'actual' data included in the last year of the Historical Period (normally a 'bridge' year):

3. System O&M contains the following accounts: 5005, 5010, 5012, 5014, 5015, 5016, 5017, 5020, 5025, 5030, 5035, 5040, 5045, 5050, 5055, 5060, 5070, 5075, 5085, 5090, 5095, 5096, 5105, 5110, 5112, 5114, 5120, 5125, 5130, 5135, 5145, 5150, 5155, 5160, 5165, 5170, 5172, 5175, 5178, 51

| xhibit:     |  |
| ab:         |  |
| Schedule:   |  |
| age:        |  |

#### August 31, 2022

#### Appendix 2-BA Fixed Asset Continuity Schedule <sup>1</sup>

- 1 Tables in the format outlined above covering all fixed asset accounts should be submitted for the Test Year, Bridge Year and all relevant historical years. At a minimum, the applicant must provide data for the earlier of: 1) all historical years back to its last rebasing; or 2) at least three years of historical actuals, in addition to Bridge Year and Test Year and Test Year forecasts. If this is the first application where the applicant is rebasing under MIFRS, contact OEB staff for further guidance on the appropriate fixed asset continuity schedules to complete (i.e. applicable years and accounting standard for each schedule).
- 2 The "CCA Class" for fixed assets should generally agree with the CCA Classes for tax purposes. If an applicant uses any different classes from those shown in the table, an explanation should be provided. (also see note 3).
- 3 The table may need to be customized for a utility's asset categories or for any new asset accounts announced or authorized by the OEB.
- 4 The additions in column (E) must not include construction work in progress (CWIP).
- Effective on the date of IFRS adoption, customer contributions will no longer be recorded in Account 1995 Contributions & Grants, but will be recorded in Account 2440, Deferred Revenues. Amortization of deferred revenue will be removed from the depreciation expense shown on this fixed asset continuity schedule as it should be included as income in Appendix 2-H Other Revenues.
- The applicant must ensure that all asset disposals have been clearly identified in the Chapter 2 Appendices for all historic, bridge and test years. Where a distributor for general financial reporting purposes under IFRS has accounted for the amount of gain or loss on the retirement of assets in a pool of like assets as a charge or credit to income, for reporting and rate application filings, the distributor shall reclassify such gains and losses as depreciation expense, and disclose the amount separately.
- 7 This account includes the amount recorded under finance leases for plant leased from others and used by the utility in its utility operations.
- The applicant must establish the continuity of historical cost for gross assets and accumulated depreciation by asset class by ensuring that the opening balance in the year agrees to the closing balance in the prior year.

## Appendix D – Bill Impacts Settlement

## Tariff Schedule and Bill Impacts Model (2023 Cost of Service Filers)

The bill comparisons below must be provided for typical customers and consumption levels. Bill impacts must be provided for residential customers consuming 750 kWh per month and general service customers consuming 2,000 kWh per month and having a monthly demand of less than 50 kW. Include bill comparisons for Non-RPP (retailer) as well. To assess the combined effects of the shift to fixed rates and other bill impacts associated with changes in the cost of distribution service, applicants are to include a total bill impact for a residential customer at the distributor's 10th consumption percentile (In other words, 10% of a distributor's residential customers consume at or less than this level of consumption on a monthly basis). Refer to section 3.2.3 of the Chapter 3 Filing Requirements For Electricity Distribution Rate Applications.

For certain classes where one or more customers have unique consumption and demand patterns and which may be significantly impacted by the proposed rate changes, the distributor must show a typical comparison, and provide an explanation.

#### Noto:

- 1. For those classes that are not eligible for the RPP price, the weighted average price including Class B GA through end of May 2017 of \$0.1036/kWh (IESO's Monthly Market Report for May 2017, page 22) has been used to represent the cost of power. For those classes on a retailer contract, applicants should enter the contract price (plus GA) for a more accurate estimate. Changes to the cost of power can be made directly on the bill impact table for the specific class.
- 2. Please enter the applicable billing determinant (e.g. number of connections or devices) to be applied to the monthly service charge for unmetered rate classes in column N. If the monthly service charge is applied on a per customer basis, enter the number "1". Distributors should provide the number of connections or devices reflective of a typical customer in each class.

Note that cells with the highlighted color shown to the left indicate quantities that are loss adjusted.

## Tariff Schedule and Bill Impacts Model (2023 Cost of Service Filers)

The bill comparisons below must be provided for typical customers and consumption levels. Bill impacts must be provided for residential customers consuming 750 kWh per month and general service customers consuming 2,000 kWh per month and having a monthly demand of less than 50 kW. Include bill comparisons for Non-RPP (retailer) as well. To assess the combined effects of the shift to fixed rates and other bill impacts associated with changes in the cost of distribution service, applicants are to include a total bill impact for a residential customer at the distributor's 10th consumption percentile (In other words, 10% of a distributor's residential customers consume at or less than this level of consumption on a monthly basis). Refer to section 3.2.3 of the Chapter 3 Filing Requirements For Electricity Distribution Rate Applications.

For certain classes where one or more customers have unique consumption and demand patterns and which may be significantly impacted by the proposed rate changes, the distributor must show a typical comparison, and provide an explanation.

#### Noto:

- 1. For those classes that are not eligible for the RPP price, the weighted average price including Class B GA through end of May 2017 of \$0.1036/kWh (IESO's Monthly Market Report for May 2017, page 22) has been used to represent the cost of power. For those classes on a retailer contract, applicants should enter the contract price (plus GA) for a more accurate estimate. Changes to the cost of power can be made directly on the bill impact table for the specific class.
- 2. Please enter the applicable billing determinant (e.g. number of connections or devices) to be applied to the monthly service charge for unmetered rate classes in column N. If the monthly service charge is applied on a per customer basis, enter the number "1". Distributors should provide the number of connections or devices reflective of a typical customer in each class.

Note that cells with the highlighted color shown to the left indicate quantities that are loss adjusted.

#### Table 1

In the manager's summary, discuss the reas

# Tariff Schedule and Bill Impacts Model (2023 Cost of Service Filers)

The bill comparisons below must be provided for typical customers and consumption levels. Bill impacts must be provided for residential customers consuming 750 kWh per month and general service customers consuming 2,000 kWh per month and having a monthly demand of less than 50 kW. Include bill comparisons for Non-RPP (retailer) as well. To assess the combined effects of the shift to fixed rates and other bill impacts associated with changes in the cost of distribution service, applicants are to include a total bill impact for a residential customer at the distributor's 10th consumption per centile (In other words, 10% of a distributor's residential customers consume at or less than this level of consumption on a monthly basis). Refer to section 3.2.3 of the Chapter 3 Filling Requirements For Electricity Distribution Rate Applications.

For certain classes where one or more customers have unique consumption and demand patterns and which may be significantly impacted by the proposed rate changes, the distributor must show a typical comparison, and provide an explanation.

#### Noto:

- 1. For those classes that are not eligible for the RPP price, the weighted average price including Class B GA through end of May 2017 of \$0.1036/kWh (IESO's Monthly Market Report for May 2017, page 22) has been used to represent the cost of power. For those classes on a retailer contract, applicants should enter the contract price (plus GA) for a more accurate estimate. Changes to the cost of power can be made directly on the bill impact table for the specific class.
- 2. Please enter the applicable billing determinant (e.g. number of connections or devices) to be applied to the monthly service charge for unmetered rate classes in column N. If the monthly service charge is applied on a per customer basis, enter the number "1". Distributors should provide the number of connections or devices reflective of a typical customer in each class.

Note that cells with the highlighted color shown to the left indicate quantities that are loss adjusted.

#### Table 1

# RESIDENTIAL SERVICE CLASSIFICATION

This classification applies to an account taking electricity at 750 volts or less where the electricity is used exclusively in a single family unit, non-commercial. This can be a separately metered living accommodation, town house, apartment, semi-detached, duplex, triplex or quadruplex with residential zoning. Class B consumers are defined on accordance with O. Reg. 429/04. Further servicing details are available in the distributor's Conditions of Service.

#### **APPLICATION**

The application of these rates and charges shall be in accordance with the Licence of the Distributor and any Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, which may be applicable to the administration of this schedule.

No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, or as specified herein.

Unless specifically noted, this schedule does not contain any charges for the electricity commodity, be it under the Regulated Price Plan, a contract with a retailer or the wholesale market price, as applicable. In addition, the charges in the MONTHLY RATES AND CHARGES - Regulatory Component of this schedule do not apply to a customer that is an embedded wholesale market participant.

It should be noted that this schedule does not list any charges, assessments, or credits that are required by law to be invoiced by a distributor and that are not subject to Ontario Energy Board approval, such as the Global Adjustment and the HST.

# Effective and Implementation Date May 1, 2023

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

EB-2022-0059

# **GENERAL SERVICE 50 TO 4,999 KW SERVICE CLASSIFICATION**

This classification applies to a non residential account whose average monthly peak demand used for billing purposes over the past 12 months is equal to or greater than, or is forecast to be equal to or greater than, 50 kW but less than 5,000 kW. Class A and Class B consumers are defined on accordance with O. Reg. 429/04. Further servicing details are available in the distributor's Conditions of Service.

#### **APPLICATION**

The application of these rates and charges shall be in accordance with the Licence of the Distributor and any Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, which may be applicable to the administration of this schedule.

No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, or as specified herein.

Unless specifically noted, this schedule does not contain any charges for the electricity commodity, be it under the Regulated Price Plan, a contract with a retailer or the wholesale market price, as applicable. In addition, the charges in the MONTHLY RATES AND CHARGES - Regulatory Component of this schedule do not apply to a customer that is an embedded wholesale market participant.

If included in the following listing of monthly rates and charges, the rate rider for the disposition of WMS - Sub-account CBR Class B is not applicable to wholesale market participants (WMP), customers that transitioned between Class A and Class B during the variance account accumulation period, or to customers that were in Class A for the entire period. Customers who transitioned are to be charged or refunded their share of the variance disposed through customer specific billing adjustments. This rate rider is to be consistently applied for the entire period to the sunset date of the rate rider. In addition, this rate rider is applicable to all new Class B customers.

If included in the following listing of monthly rates and charges, the rate rider for the disposition of Global Adjustment is only applicable to non-RPP Class B customers. It is not applicable to WMP, customers that transitioned between Class A and Class B during the variance account accumulation period, or to customers that were in Class A for the entire period. Customers who transitioned are to be charged or refunded their share of the variance disposed through customer specific billing adjustments. This rate rider is to be consistently applied for the entire period to the sunset date of the rate rider. In addition, this rate rider is applicable to all new non-RPP Class B customers.

It should be noted that this schedule does not list any charges, assessments, or credits that are required by law to be invoiced by a distributor and that are not subject to Ontario Energy Board approval, such as the Global Adjustment and the HST.

### UNMETERED SCATTERED LOAD SERVICE CLASSIFICATION

This classification applies to an account taking electricity at 750 volts or less whose average monthly peak demand is less than, or is forecast to be less than, 50 kW and the consumption is unmetered. Such connections include cable TV power packs, bus shelters, telephone booths, traffic lights, railway crossings, etc. The customer will provide detailed manufacturer information documentation with regard to electrical demand/consumption of the proposed unmetered load. Class B consumers are defined on accordance with O. Reg. 429/04. Further servicing details are available in the Distributor's Conditions of Service.

#### **APPLICATION**

The application of these rates and charges shall be in accordance with the Licence of the Distributor and any Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, which may be applicable to the administration of this schedule.

No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, or as specified herein.

Unless specifically noted, this schedule does not contain any charges for the electricity commodity, be it under the Regulated Price Plan, a contract with a retailer or the wholesale market price, as applicable. In addition, the charges in the MONTHLY RATES AND CHARGES - Regulatory Component of this schedule do not apply to a customer that is an embedded wholesale market participant.

It should be noted that this schedule does not list any charges, assessments, or credits that are required by law to be invoiced by a distributor and that are not subject to Ontario Energy Board approval, such as the Global Adjustment and the HST.

### SENTINEL LIGHTING SERVICE CLASSIFICATION

This classification applies to safety/security lighting with a Residential or General Service customer. This is typically exterior lighting, and unmetered. Consumption is estimated based on the equipment rating and estimated hours of use. Class B consumers are defined on accordance with O. Reg. 429/04. Further servicing details are available in the distributor's Conditions of Service.

#### **APPLICATION**

The application of these rates and charges shall be in accordance with the Licence of the Distributor and any Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, which may be applicable to the administration of this schedule.

No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, or as specified herein.

Unless specifically noted, this schedule does not contain any charges for the electricity commodity, be it under the Regulated Price Plan, a contract with a retailer or the wholesale market price, as applicable. In addition, the charges in the MONTHLY RATES AND CHARGES - Regulatory Component of this schedule do not apply to a customer that is an embedded wholesale market participant.

It should be noted that this schedule does not list any charges, assessments, or credits that are required by law to be invoiced by a distributor and that are not subject to Ontario Energy Board approval, such as the Global Adjustment and the HST.

### RESIDENTIAL SERVICE CLASSIFICATION

This classification applies to an account taking electricity at 750 volts or less where the electricity is used exclusively in a single family unit, non-commercial. This can be a separately metered living accommodation, town house, apartment, semi-detached, duplex, triplex or quadruplex with residential zoning. Class B consumers are defined on accordance with O. Reg. 429/04. Further servicing details are available in the distributor's Conditions of Service.

#### **APPLICATION**

The application of these rates and charges shall be in accordance with the Licence of the Distributor and any Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, which may be applicable to the administration of this schedule.

No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, or as specified herein.

Unless specifically noted, this schedule does not contain any charges for the electricity commodity, be it under the Regulated Price Plan, a contract with a retailer or the wholesale market price, as applicable. In addition, the charges in the MONTHLY RATES AND CHARGES - Regulatory Component of this schedule do not apply to a customer that is an embedded wholesale market participant.

It should be noted that this schedule does not list any charges, assessments, or credits that are required by law to be invoiced by a distributor and that are not subject to Ontario Energy Board approval, such as the Global Adjustment and the HST.

### GENERAL SERVICE LESS THAN 50 KW SERVICE CLASSIFICATION

This classification applies to a non residential account taking electricity at 750 volts or less whose average monthly peak demand is less than, or is forecast to be less than, 50 kW. Class B consumers are defined on accordance with O. Reg. 429/04. Further servicing details are available in the distributor's Conditions of Service.

#### **APPLICATION**

The application of these rates and charges shall be in accordance with the Licence of the Distributor and any Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, which may be applicable to the administration of this schedule.

No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, or as specified herein.

Unless specifically noted, this schedule does not contain any charges for the electricity commodity, be it under the Regulated Price Plan, a contract with a retailer or the wholesale market price, as applicable. In addition, the charges in the MONTHLY RATES AND CHARGES - Regulatory Component of this schedule do not apply to a customer that is an embedded wholesale market participant.

It should be noted that this schedule does not list any charges, assessments, or credits that are required by law to be invoiced by a distributor and that are not subject to Ontario Energy Board approval, such as the Global Adjustment and the HST.

# **GENERAL SERVICE 50 TO 4,999 KW SERVICE CLASSIFICATION**

This classification applies to a non residential account whose average monthly peak demand used for billing purposes over the past 12 months is equal to or greater than, or is forecast to be equal to or greater than, 50 kW but less than 5,000 kW. Class A and Class B consumers are defined on accordance with O. Reg. 429/04. Further servicing details are available in the distributor's Conditions of Service.

#### **APPLICATION**

The application of these rates and charges shall be in accordance with the Licence of the Distributor and any Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, which may be applicable to the administration of this schedule.

No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, or as specified herein.

Unless specifically noted, this schedule does not contain any charges for the electricity commodity, be it under the Regulated Price Plan, a contract with a retailer or the wholesale market price, as applicable. In addition, the charges in the MONTHLY RATES AND CHARGES - Regulatory Component of this schedule do not apply to a customer that is an embedded wholesale market participant.

If included in the following listing of monthly rates and charges, the rate rider for the disposition of WMS - Sub-account CBR Class B is not applicable to wholesale market participants (WMP), customers that transitioned between Class A and Class B during the variance account accumulation period, or to customers that were in Class A for the entire period. Customers who transitioned are to be charged or refunded their share of the variance disposed through customer specific billing adjustments. This rate rider is to be consistently applied for the entire period to the sunset date of the rate rider. In addition, this rate rider is applicable to all new Class B customers.

If included in the following listing of monthly rates and charges, the rate rider for the disposition of Global Adjustment is only applicable to non-RPP Class B customers. It is not applicable to WMP, customers that transitioned between Class A and Class B during the variance account accumulation period, or to customers that were in Class A for the entire period. Customers who transitioned are to be charged or refunded their share of the variance disposed through customer specific billing adjustments. This rate rider is to be consistently applied for the entire period to the sunset date of the rate rider. In addition, this rate rider is applicable to all new non-RPP Class B customers.

It should be noted that this schedule does not list any charges, assessments, or credits that are required by law to be invoiced by a distributor and that are not subject to Ontario Energy Board approval, such as the Global Adjustment and the HST.

# UNMETERED SCATTERED LOAD SERVICE CLASSIFICATION

This classification applies to an account taking electricity at 750 volts or less whose average monthly peak demand is less than, or is forecast to be less than, 50 kW and the consumption is unmetered. Such connections include cable TV power packs, bus shelters, telephone booths, traffic lights, railway crossings, etc. The customer will provide detailed manufacturer information documentation with regard to electrical demand/consumption of the proposed unmetered load. Class B consumers are defined on accordance with O. Reg. 429/04. Further servicing details are available in the Distributor's Conditions of Service.

#### **APPLICATION**

The application of these rates and charges shall be in accordance with the Licence of the Distributor and any Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, which may be applicable to the administration of this schedule.

No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, or as specified herein.

Unless specifically noted, this schedule does not contain any charges for the electricity commodity, be it under the Regulated Price Plan, a contract with a retailer or the wholesale market price, as applicable. In addition, the charges in the MONTHLY RATES AND CHARGES - Regulatory Component of this schedule do not apply to a customer that is an embedded wholesale market participant.

It should be noted that this schedule does not list any charges, assessments, or credits that are required by law to be invoiced by a distributor and that are not subject to Ontario Energy Board approval, such as the Global Adjustment and the HST.

### SENTINEL LIGHTING SERVICE CLASSIFICATION

This classification applies to safety/security lighting with a Residential or General Service customer. This is typically exterior lighting, and unmetered. Consumption is estimated based on the equipment rating and estimated hours of use. Class B consumers are defined on accordance with O. Reg. 429/04. Further servicing details are available in the distributor's Conditions of Service.

#### **APPLICATION**

The application of these rates and charges shall be in accordance with the Licence of the Distributor and any Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, which may be applicable to the administration of this schedule.

No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, or as specified herein.

Unless specifically noted, this schedule does not contain any charges for the electricity commodity, be it under the Regulated Price Plan, a contract with a retailer or the wholesale market price, as applicable. In addition, the charges in the MONTHLY RATES AND CHARGES - Regulatory Component of this schedule do not apply to a customer that is an embedded wholesale market participant.

It should be noted that this schedule does not list any charges, assessments, or credits that are required by law to be invoiced by a distributor and that are not subject to Ontario Energy Board approval, such as the Global Adjustment and the HST.

### STREET LIGHTING SERVICE CLASSIFICATION

This classification applies to an account for roadway lighting with a Municipality, Regional Municipality, Ministry of Transportation and private roadway lighting operation, controlled by photo cells. The consumption for these customers will be based on the calculated connected load times the required lighting times established in the approved Ontario Energy Board street lighting load shape template. Class B consumers are defined on accordance with O. Reg. 429/04. Further servicing details are available in the distributor's Conditions of Service.

#### **APPLICATION**

The application of these rates and charges shall be in accordance with the Licence of the Distributor and any Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, which may be applicable to the administration of this schedule.

No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, or as specified herein.

Unless specifically noted, this schedule does not contain any charges for the electricity commodity, be it under the Regulated Price Plan, a contract with a retailer or the wholesale market price, as applicable. In addition, the charges in the MONTHLY RATES AND CHARGES - Regulatory Component of this schedule do not apply to a customer that is an embedded wholesale market participant.

It should be noted that this schedule does not list any charges, assessments, or credits that are required by law to be invoiced by a distributor and that are not subject to Ontario Energy Board approval, such as the Global Adjustment and the HST.

# **RETAIL SERVICE CHARGES (if applicable)**

The application of these rates and charges shall be in accordance with the Licence of the Distributor and any Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, which may be applicable to the administration of this schedule.

No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, or as specified herein.

Unless specifically noted, this schedule does not contain any charges for the electricity commodity, be it under the Regulated Price Plan, a contract with a retailer or the wholesale market price, as applicable.

It should be noted that this schedule does not list any charges, assessments, or credits that are required by law to be invoiced by a distributor and that are not subject to Ontario Energy Board approval, such as the Global Adjustment and the HST.

Retail Service Charges refer to services provided by a distributor to retailers or customers related to the supply of competitive electricity.

| One-time charge, per retailer, to establish the service agreement between the distributor and the retailer | \$       | 111.66 |
|--|----------|--------|
| Monthly fixed charge, per retailer   | \$       | 44.67  |
| Monthly variable charge, per customer, per retailer  | \$/cust. | 1.11   |

## PUC Distribution Inc. - 2023 Cost of Service Application – Sault Smart Grid Project VVO Linkage to ROE

#### **Accounting Order**

#### Account 1508 Other Regulatory Assets, Sub-account Incremental VVO Costs or Savings

As part of the Ontario Energy Board's ("OEB") decision on the Sault Smart Grid ("SSG") project (EB-2018-0219/EB-2020-0249), PUC Distribution Inc. ("PUC") was required to file all available information on the proposed SSG performance metrics that it intends to track, along with proposed targets, in its next rebasing application. The OEB required PUC to include an appropriate metric and targets to symmetrically link the Voltage / VAR Optimization ("VVO") performance of SSG to PUC's allowable Return on Equity ("ROE") for this Project. PUC proposed and the Parties agreed to do this through the use of Account 1508 – Other Regulatory Assets, Sub Account Incremental VVO Costs or Savings. The sub-account will record incremental VVO savings or costs to customers in a given year. The following describes the calculation of the VVO % savings to ROE linkage and includes the corresponding sample journal entries for the sharing of incremental savings or costs to customers.

This sub-account will have an effective date of May 1, 2023.

#### **VVO Link to ROE**

As identified in its SSG ICM Application, PUC's target is to achieve 2.70% VVO savings. If PUC achieves VVO savings that is above or below this target, it will symmetrically collect or refund or the percentage difference on its ROE for the SSG Project in that respective year using the following formula:

Debit/Credit = 
$$\frac{AVS-TVS}{TVS} \times SSGROE$$

#### Variables:

- AVS means the actual VVO energy savings achieved (expressed as a percentage of energy consumption) from the SSG project over a given calendar year.
- TVS means the targeted VVO savings from the SSG project, which shall be fixed at 2.70%.

• SSGROE means the return on equity component of revenue requirement of the SSG project in a calendar year as set out in Table 1 below.

Table 1: SSGROE Values Between 2023 and 2027

| Year | Return on Base – Equity (SSGROE) |
|------|----------------------------------|
| 2022 | , ,                              |
| 2023 | \$614,958                        |
| 2024 | \$883,842                        |
| 2025 | \$858,097                        |
| 2026 | \$832,352                        |
| 2027 | \$806,606                        |

The ROE Revenue Requirement of the SSG project will be determined using the project reconciliation amounts that PUC is required to provide as part of its next rebasing application consistent with the SSG Project Recovery Mechanism. The cost of capital parameters used to calculate ROE shall be those that are used as part of the SSG Project Recovery Mechanism model filed with PUC's Settlement Proposal for its 2023 Cost of Service Rate application (EB-2022-0059). An example of the calculation is provided in Table 1 above. The ROE values in Table 1 are for illustrative purposes only. The ROE values used in the calculation will be based on the lower i) actual SSG Project capital costs and in-service dates, and ii) and the settled amount used to calculated the SSG Recovery Mechanism Rate Rider.

Table 2 VVO Over/Under Target Scenarios<sup>1</sup>

|                   | Over VVO  | Under VVO  |
|-------------------|-----------|------------|
|                   | Target    | Target     |
| ROE               | \$750,000 | \$750,000  |
| VVO %Target       | 2.70%     | 2.70%      |
| VVO %Result       | 3.00%     | 2.40%      |
| delta             | 11.11%    | -11.11%    |
| Refund/Collection | \$83,333  | (\$83,333) |

<sup>1 –</sup> These numbers are for illustration purposes only. The actual amount will vary given the VVO kWh savings and ROE amount from year to year.

The scenarios in Table 2 result in either a debit (collection) from customer or a credit (refund) to customers. A sample of corresponding journal entries is provided in Table 3 below.

<u>Table 3 – Accounting Entries for VVO Over/Under Target Scenarios<sup>1</sup></u>

| VVO Result 2.40%                                    |                  |          |  |  |
|---|------------------|----------|--|--|
| 4080 Distribution Revenue                           | \$83,333         |          |  |  |

| 1508 Other Regulatory Assets, Sub-account           |                  |          |  |  |
| Incremental VVO Costs or Savings                    | \$83,333         |          |  |  |
| 4080 Distribution Revenue \$83,3                    |                  | \$83,333 |  |  |
| to record the reduction in savings to PUC Customers |                  |          |  |  |

<sup>1 -</sup> These numbers are for illustration purposes only. The actual amount will vary given the VVO kWh savings and ROE amount from year to year.

Additionally, PUC will apply a symmetrical maximum upside (5.4% VVO kWh savings) and downside (0% VVO kWh savings) equal to the ROE of the SSG Project.

#### **Disposition of the Account Balance**

The Parties agree that at the next rebasing application where PUC shall bring forward the sub-account for disposition, the OEB panel hearing the matter will have discretion regarding how much, if any amount, should ultimately be recorded in the account and disposed to the benefit of either PUC or customers. The parties' agreement on this matter is based on the following expected treatment of the account:

- the maximum amount that can be credited or debited for any year shall not exceed the level of the symmetrical maximum upside (5.4% VVO kWh savings) and downside (0% VVO kWh savings) for the calculated ROE for the SSG Project in accordance with the formula above. Any calculated amounts are solely related to VVO consumptions savings and all other factors (e.g., distribution automation) are excluded from this account;
- the principle of symmetrical risk/reward of this account around a targeted VVO savings of 2.70% shall be maintained to the maximum extent possible; and
- the OEB panel deciding the disposition of the account will be guided by the results of the report(s) set out in Issue 5.4 of the Settlement Proposal, and any information that arises from review of those reports.

As referenced by PUC in Clarification Question CCC-55, substantial completion of the project requires optimization and testing by Black and Veatch: (a) on a station by station basis to finalize voltage reduction settings and control systems; and (b) on full system wide basis to confirm coordinated station performance, which includes items such as integrated measurement, verification and reporting. As set out in the response to Staff-29, the testing and optimization phase of the SSG Project PUC anticipates to be in a position to start measuring VVO savings at the time of Substantial Completion. Substantial Completion is currently expected to occur November 1, 2023. On that basis, Parties have not agreed how to apply the VVO Link to ROE formula for the 2023 year (or if necessary, into 2024).

The Parties do agree that the OEB at the time of disposition of the account will address, what if any, amount for 2023 should be disposed to the benefit of ratepayers or the utility. At that time, and subject to the operation of this account, some Parties may take the position that PUC should receive no ROE for the period in which the project is not substantially complete or for any period in which the project fails to operate as expected after it becomes substantially complete.

The Parties expect that the OEB will take into account the Parties' agreement on the above noted treatment of the account when the OEB considers disposition of the account.

The continuation or discontinuation of this account shall be addressed at the time of PUC's 2028 rebasing application.

#### 1) Account 1508 Other Regulatory Assets, Sub-account Incremental VVO Costs or Savings

This account shall be used to record incremental VVO costs or savings to customers when the VVO percentage is above or below the targeted 2.70% VVO savings. The savings or costs have upper and lower maximums of 5.40% and 0% respectively equalling the ROE of the SSG Project for a given year as detailed above.

#### 2) Account 1508 Other Regulatory Assets, Sub-account Incremental VVO Costs or Savings Carrying Charges

Carrying charges shall be recorded monthly in this sub-account, calculated using simple interest applied to the opening balances in the Incremental VVO Costs of Savings sub-account. The interest rate shall be at the OEB's prescribed rate. The following are sample journal entries is an example for carrying charges.

6035 – Other Interest Expense

1508 – Sub-account Incremental VVO Costs or Savings Carrying Charges

To record the carrying charges if there is a credit balance owing to customers at year end.

1508 – Sub-account Incremental VVO Costs or Savings Carrying Charges

4405 – Interest and Dividend Income

To record the carrying charges if there is a debit balance owing from customers at year end.

## PUC Distribution Inc. - 2023 Cost of Service Application – Sault Smart Grid Project Liquidated Damages

# Accounting Order Account 1508 Other Regulatory Assets, Sub-account SSG EPC Contract Liquidated Damages

As part of the Ontario Energy Board's ("OEB") decision on the Sault Smart Grid project (EB-2018-0219/EB-2020-0249) ("SSG"), the OEB found that in order to manage the risks associated with SSG and appropriately monitor its progress, the OEB approval was subject to the following condition:

"Any EPC Contract liquidated damages resulting from "performance" or "delay" shall be used to reduce the project capital cost and would be settled at the time of the next rebasing."

No liquidated damages were calculated as of the time of the 2023 Cost of Service application. This sub-account is to record the revenue requirement impact of any liquidated damages received by PUC for the SSG Project, so that the reduction to the settled upon SSG revenue requirement resulting from liquidated damages is returned to ratepayers. This sub-account will have an effective date of May 1, 2023 and will record the revenue requirement impact of any liquidated damages received related to the SSG Project even if they were received or became due before the effective date.

## 1) Account 1508 Other Regulatory Assets, Sub-account SSG EPC Contract Liquidated Damages

This account shall be used to record the revenue requirement impact of any liquidated damages received.

## 2) Account 1508 Other Regulatory Assets, Sub-account SSG EPC Contract Liquidated Damages Carrying Charges

Carrying charges shall be recorded monthly in this sub-account, calculated using simple interest applied to the opening balances in the SSG EPC Contract Liquidated Damages sub-account. The interest rate shall be at the OEB's prescribed rate.

A sample of the journal entries associated with liquidated damages is presented below.

### Account 1508 Other Regulatory Assets, Sub-account SSG Project Recovery Mechanism Variance Account

PUC shall establish Account 1508 – Other Regulatory Assets, Sub-account Sault Smart Grid ("SSG") Project Recovery Mechanism Variance Account and a corresponding carrying charge sub-account effective May 1, 2023.

This purpose of the sub-account is to record an asymmetrical true-up for the recovery of the SSG Project to the benefit of ratepayers for the period of May 1, 2023 to April 30, 2028. The mechanics are of this true-up are described under #1 below. PUC's net recovery for the SSG Project for this period, after considering this sub-account, will be the lower of

- a) total rate riders collected from May 1, 2023 to April 30, 2028; and
- b) the sum of 2023 to 2027 revenue requirements, where the annual revenue requirement is the lower of i) the recalculated revenue requirement based on actual SSG Project capital costs and in-service dates ("Actual Revenue Requirement"), and ii) the settled forecasted revenue requirement used to calculate the SSG Recovery Mechanism Rate Rider ("Settled Revenue Requirement").

This sub-account will be a Group 2 account and the balance will be requested for disposition at PUC's next Cost of Service application with carrying charges applied at the OEB's prescribed rate. The sub-account will be closed upon disposition of the balance, if any.

## 1) Account 1508 Other Regulatory Assets, Sub-account SSG Project Recovery Mechanism Variance Account

Annually, the lower of the Actual Revenue Requirement and the Settled Revenue Requirement will be identified ("Lower Revenue Requirement"). Once the annual Lower Revenue Requirement is identified, the Lower Revenue Requirement will be recorded in the sub-account. The rate riders collected for that year will also be recorded in the sub-account as an offset. This net effect in the sub-account will be:

• If the annual Lower Revenue Requirement is less than rate riders collected for that year, a credit amount equalling the difference between the two will be recorded in the sub-account.

• If the annual Lower Revenue Requirement is greater than rate riders collected for that year, a debit amount equalling the difference between the two will be recorded in the sub-account.

If the cumulative amount recorded in the sub-account is a credit amount on April 30, 2028, the credit amount will be returned to ratepayers. Conversely, if the cumulative amount recorded in the sub-account is a debit amount, the debit amount will not be disposed and the balance in the sub-account will not be recoverable from ratepayers and will be written off.

## 2) Account 1508 Other Regulatory Assets, Sub-account SSG Project Recovery Mechanism Carrying Charges

Carrying charges shall be recorded monthly in this sub-account, calculated using simple interest applied to the opening balances in the SSG Project Recovery Mechanism Variance Account sub-account. The interest rate shall be at the OEB's prescribed rate. This sub-account will be disposed of if there is a credit balance. Otherwise, the balance in the sub-account will not be disposed and the balance in the sub-account will be written off.

An illustrative example with journal entries associated with the SSG Project and SSG Project Recovery Mechanism Variance Account.

#### Appendix J – PUC's Response to OEB Order #6

### **APPENDIX H**

PUC's Response to OEB
Order #6

The following is the methodology and targets outlined for each category in OEB Order number 6 from the decision and order for EB-2018-0219/2020-0249. This response forms part of the Distribution System Plan, Section 5.3.6.2.3 (Pg 94).

#### 5.3.6.2.3 PUC's Response to OEB Order #6

The SSG project performance metrics being developed are summarized in the following table and referenced appendices. There are three metric categories in Table 1: SSG Project Performance Metrics; (1) Green House Gas ("GHG") emissions reduction, (2) Improved asset utilization and increased (energy) efficiency, and (3) Increased reliability and resiliency. The main direct measurable metrics are "Energy Savings", which is also an input to GHG emissions reduction, and reliability improvement, that will be developed for measurement purposes with the SSG project and used to derive other metric calculations. As noted, certain measures are intended more as trending performance indicators than targets which will require development and data analysis over a longer-term period.

Table 1: SSG Project Performance Metrics

| Area                                    | Metric  | Description   | Target  |
|---|---|---|---|
| GHG<br>emissions<br>reductions          | Reduction in GHG<br>Emissions   | GHG emissions reduction from provincial generation sources achieved through the SSG VVO reduction in kWh energy use/purchase.   | 2860<br>(tCO2e)                               |
|   | Reduced energy losses<br>from GHG emitting supply<br>(kWh) (but not calculated<br>directly) | Energy reduction of lower power purchase/supply by PUC applied to average provincial transmission grid loss factor means less energy production from provincial generation sources and additional GHG reduction.  | Is Included<br>in above<br>GHG<br>calculation |
| Improved<br>Asset<br>Utilization<br>and | Reduction in peak demand on utility assets (kW)   | Demand reduction (kW on station assets) will be measured as part of the VVO performance measurements.   | Trending<br>KPI's<br>(kW and<br>%)            |
| increased<br>energy<br>efficiency       | Reduction in energy losses (% of PP kWh)  | The energy reduction achieved with the SSG VVO solution will reduce system losses in relation to the reduced energy delivery.   | 2.7% of<br>system<br>losses                   |
|   | \$ savings from deferred system upgrades  | This measure requires further research on methodology and data collection and will be part of future asset management programs. The measure and associated target will be evaluated with asset management planning systems over the 2023-2027 DSP period. | Trending<br>KPI<br>TBD                        |
|   | \$ energy savings to customers (& kWh)  | The VVO energy savings (kWh) and a total system average energy price (P <sub>AVG</sub> ) calculation.   | 2.7% kWh<br>and<br>\$'s (calc)                |
| Increased reliability and resiliency    | # events Fault Location,<br>Isolation and Restoration<br>(FLISR) responded to               | Utilize data captured in the Outage Management System (OMS) combined with data from SCADA report an event count and trending KPI.   | FLISR<br>Event<br>Trending<br>KPI             |

| Area | Metric  | Description   | Target             |
|------|---|---|--------------------|
|      | # Customer calls/ After review, PUC decided this metric would not be complaints avoided due to fewer outages After review, PUC decided this metric would not be used as a satisfactory measurement method could not be determined.                    |   | N/A                |
|      | \$ revenue loss avoided from outages avoided  | Calculation/estimate from the customer minute reliability improvement metric multiplied by an average customer revenue value. | Calculated<br>\$'s |
|      | NEW Reduced customer minutes of interruption (CMI) Utilize the new OMS and SCADA system to calculate the difference in customer minutes of interruption (CMI) on feeders with DA deployed and an estimate of CMI that would have occurred without DA. |   | 10% CMI            |

#### **Energy Savings**

The energy savings performance metric target is 2.7%. This metric applies to customers supplied from PUC's 12.5kV distribution system with VVO deployed and includes savings on annual kWh energy purchases of reduced customer consumption and energy losses. Guidance on development of the Measurement and Verification (M&V) methodology was drawn from the EPC design team and the IEEE 1885-2022<sup>1</sup> Standard. The VVO M&V methodology summary is provided in Appendix A.

An example of the annual calculation of the overall 2.7% target calculation is provided in Figure 1 below.

[Energy Savings (1)]

[Purchased Energy (2) + Energy Savings (1)]

(1) Annual kwh saved on 12.5 kV circuits deployed
(2) Total System Purchased Energy less direct 34.5 kV customers

The kWh values used in the example calculation are from the SSG ICM application Appendix AA14

Figure 1: 2.7% Target Calculation

Calculations of savings to specific customer classes will utilize a proportional allocation initially and may evolve over time with future data analysis. It is unknown if statistically supported alternative allocation approaches or conclusions can be derived at this time. New data collected over future years of VVO operation may inform alternative methods for customer class specific benefit measurement. The methodology developed for the ICM energy savings financial benefit estimate (ICM Appendix AA14), attached as appendix C, will be applied with new annual actual data each year.

The kWh energy savings will also be used as an input value in calculation of GHG emission reductions.

- Reduction in GHG Emissions (tCO2e), and
- Reduced energy losses from GHG emitting supply (kWh)

<sup>1</sup> IEEE 1885-2022 Guide for Assessing, Measuring and Verifying Volt-Var Control Optimization on Distribution Systems.

95

#### **GHG Emission Calculations**

National Resources Canada ("NRCan") has developed a Smart Grid Program GHG Project Accounting Template for use in reporting by program participants. The on-line reporting template was issued earlier in 2022 to begin implementation. PUC submitted our initial data in July 2022 in the template and is currently in the validation phase with the program administrators.

The following figure is from the NRCan reporting template and has the GHG estimates developed by PUC and submitted to NRCan for the project.

CALCULATIONS FOR SSR ELEMENT P1

Parameter/Variable Value Unit Source documents and notes

PUCD energy savings 17456712 kWh/year PUCD ICM rate application records - VVM Energy Savings Estimate

Electricity Sector GHG Emissions

ESO Annual Planning Outlook Report (2020) - Figure 37

IESO Annual Planning Outlook Report (2020) - Figure 2

Ratio Annual/Marginal Emission Factor x Emission factor

x Emission factor

Emissions from P1 (annual)

2868.405789 tCO2e/year

Figure 2: NRCan Reporting Template

| [Estimated Energy Savings (1)] * [Ontario Energy/Ontario GHG) (2)] * [[AEF/MEF] | [17,456,712] * [ 5500MtCo2e/1.446TWh] *[4.32] | = | 2868 |
|---|---|---|------|
| (1) on 12.5 kV circuits with VVO deployed                                       |   |   |      |
| (2) From IESO Annual Outlook Report   |   |   |      |
| (3) Ratio of Marginal Emission to Average Emission factors - TAF Report         |   |   |      |

PUC's understanding of IESO data suggests GHG savings from the provincial transmission grid would be included in IESO reporting so it is not directly calculated.

PUC has proposed to NRCan the same methodology for GHG savings calculations utilized in the SSG ICM (EB-2020-0249/EB-2018-0219) interrogatory responses to ED-1 filed on January 25, 2021.

The proposed calculation of subsequent year savings would be updated with new input factors from PUC calculated energy savings and new IESO and industry data on provincial source emission factors. A ten-year forecast using current IESO data is in table 2 below.

Table 2: Ten Year Forecast of Project GHG Savings

|      | Project emissions |
|------|-------------------|
| YEAR | (tCO2e/year)      |
| 2023 | 2,151             |
| 2024 | 2,861             |
| 2025 | 2,861             |
| 2026 | 2,861             |
| 2027 | 2,861             |
| 2028 | 2,861             |
| 2029 | 2,861             |
| 2030 | 2,861             |
| 2031 | 2,861             |
| 2032 | 2,861             |
| 2033 | 2,861             |

#### **Reliability Improvement**

Reliability performance metrics are focused on positive trending over time of customer minutes of improved reliability on an event-based calculation. Each outage event with Distribution Automation FLISR and DA action will be tracked, and calculations of improved customer minutes of interruption performed. An added row to the table has been included for Reduced Customer Minutes of Interruption (CMI). Calculations for normal scorecard metrics of SAIDA and SAIFI will also be completed. The Reliability Improvement Methodology Summary is provided in Appendix B.

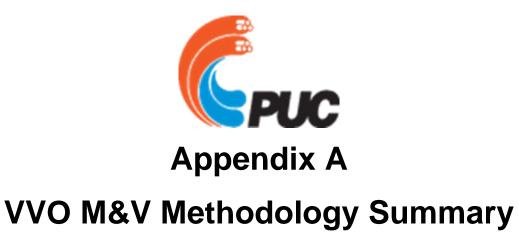

#### **Development of Metric Detailed Procedures**

The previously referenced 'A' and 'B' appendices for the energy savings and reliability metrics provide a summary level description of the methodology being used. Ensuring efficient and sustainable metric measurement requires documented detailed methodology with standard operating procedures, data and security management, report development, etc. which will be developed and integrated into the new SCADA and OMS systems as part of the scope of work of the EPC contractor engaged for the project.

#### Other future Metrics and KPI's

Determination of additional and new Key Performance Indicators and metrics are expected to evolve over time with new data collection based on the primary metrics outlined above. Data captured in the new Outage Management System and SCADA data historian along with potentially other data sources will with future analysis support ongoing efficiency efforts in operations, maintenance, and asset management areas.

With substantial completion of the new systems and assets in-service and operating by the end of 2022 the initial VVO testing, measurement, and fine tuning is expected to occur early in 2023. The first set of metric reporting of energy savings, GHG emissions and reliability improvements for the initial 2023 operation year will align with the annual RRR reporting period for 2023 in April 2024.

#### Appendix A. VVO M&V Methodology Summary

IEEE 1885-2022 identifies several measurement and verification methods that could be used after implementing Volt-VAr Optimization (VVO) or Conservation Voltage Reduction (CVR) to confirm whether the expected energy savings benefit is being achieved using Equation 1:

$$CVR_F = rac{\Delta E}{rac{E_0}{V_0}} = rac{\% \ Change \ in \ Energy}{\% \ Change \ in \ Voltage}$$
 Equation 1

Where solving for "% Change in Energy" provides the expected energy savings benefit as follows:

% Change in Energy = 
$$CVR_F * (\% Change in Voltage)$$

For the change needed in "% Change in Voltage", a normal operating voltage is needed in order to determine the percentage of change. For example, a PUC average system voltage is approximately 126 Volts on a 120 Volt basis. So, a new average system voltage of 122 Volts results in a 3.2% change in voltage.

PUC will use an "on-off" methodology from IEEE 1885-2022 to perform verification. The "on" part of the methodology will have PUC lowering the voltage by at least 3%² and measuring the energy used. The "off" portion of the methodology will have PUC returning the voltage to what has been the normal operating practice that results in an average system voltage of approximately 126 Volts. The resulting percentage change in energy used and voltage during each period is calculated in Equation 2 and Equation 3:

% Change in Energy = 
$$\frac{\Delta E}{E_0} = \frac{E_{ON} - E_{OFF}}{E_{OFF}}$$
 Equation 2

Where:

 $E_{OF}$  Energy used during the "on period"  $E_{OFF}$  Energy used during the "off period"

% Change in Voltage = 
$$\frac{\Delta V}{V_0} = \frac{V_{ON} - V_{OFF}}{V_{ON}}$$
 Equation 3

Where:

 $V_{ON}$  Average Voltage during the "on period"  $V_{OFF}$  Average Voltage during the "off period"

The changes in voltage and energy are direct measurements and result in the ability to calculate CVR<sub>f</sub>. Reporting of CVR<sub>f</sub>, "% Change in Energy", and "% Change in Voltage" provides standard industry metrics that can then be compared with other published results from other utilities.

<sup>&</sup>lt;sup>2</sup> IEEE 1885-2022 Guide for Assessing, Measuring and Verifying Volt-Var Control Optimization on Distribution Systems. - recommends a minimum of 3% voltage reduction for an on-off methodology.

# Reliability Improvement Methodology Summary

#### Appendix B. Reliability Improvement Methodology Summary

The measurement of reliability improvement through implementation of Distribution Automation (DA) technologies recognizes two main benefit elements but only the first will be used in the calculation. The first is a data driven calculation of customer outage minutes captured in SCADA and the Outage Management System (OMS) that will calculate a percentage reliability improvement. The second is more subjective and recognizes the improved ability to isolate and determine the fault location on a reduced feeder section as well as a much broader situational awareness in the more wide-spread storm related system outages to improve direct field crew response time and improve customer communications.

The data calculation methodology is described below.

The SCADA/OMS will have integration to GIS/AMI meter and customer data. This provides the feeder location and number of initial customers "C<sub>I</sub>" for an initial outage event.

DA action will provide a automated partial restoration to some customers " $C_M$ " who only experience a momentary outage while remaining customers " $C_S$ " experience a sustained outage.

$$C_I - C_M = C_S$$

Upon restoration the customer minutes of interruption "CMI" can be determined for each of the customer groups above utilizing the start and finish timestamp "TS" data from the SCADA/OMS.

 $C_l \times TS = CMI_l$  (customer minutes of interruption of initial outage - no DA operation)

 $C_S \times TS = CMI_S$  (customer minutes of interruption of sustained customers)

Summation of above CMI calculations for all outage events can then be used to allow calculation of annual percent reliability improvement in relation to customer minutes of interruption as well as for the Scorecard SCADI and CAIDI reliability metrics.

As example, annual calculation of SAIDI and CAIDI reliability metrics are completed in normal manner for both factors above across all outage events to generate initial *SAIDI*<sub>1</sub> and *CAIDI*<sub>2</sub> and sustained *SAIDI*<sub>3</sub> and *CAIDI*<sub>3</sub> values all referred to as "METRIC" below. Calculation as illustrated below will provide the improved reliability performance from DA.

% Improved Reliability = 
$$\frac{METRIC_I - METRIC_S}{METRIC_I} \times 100\%$$
