**EB-2022-0156/0248/0249 Community Expansion Projects
Pollution Probe Supplemental Interrogatories**

Dear Ms. Marconi:

In accordance with OEB direction, below are Pollution Probe's Supplemental Interrogatories for EB-2022-0156/0248/0249. The questions below relate to the cost-effectiveness of high-efficiency electric cold climate air-source heat pumps and related supplementary evidence filed by Enbridge in response to Exhibit I.ED.16. Pollution Probe has excluded questions on other evidence updates recently filed by Enbridge.

1-PP-Supplemental-1

Please confirm that the ASHP analysis provided by Guidehouse does not include consumer savings (e.g. incremental capital and annual electricity savings) for air-conditioning (A/C). If those values are available, please provide them.

1-PP-Supplemental-2

Please confirm that the estimates provided by HVAC contractors do not include incremental costs estimates related to A/C. If those values are available, please provide them.

1-PP-Supplemental-3

Please provide any available details that would help understand what the low/high HVAC contractor estimates represent (For example, does the low estimate represent a simple home, where the high estimate represent a large home and/or multiple heat pumps for a single customer).

1-PP-Supplemental-4

Please explain why a customer with a more expensive heat pump installation (e.g. due to a large home, multiple heat pumps or other related factors) would not be eligible for the Enbridge delivered Greener Homes Grant incentive.

1-PP-Supplemental-5

Enbridge is delivering the Greener Home program in Ontario which includes heat pump incentives in alignment with DSM per the OEB Decision in EB-2021-0002. Please confirm that cold-climate ASHPs incented by Enbridge (via Greener Home Program) per OEB approval in EB-2021-0002 meet the OEB DSM cost-effectiveness requirements.

Respectfully submitted on behalf of Pollution Probe.
