To Whom it may concern

I have attended this session in Napanee and the presentation did not convince me that the rate increase for delivery of hydro should be granted. With 1.2 B \$ there are multiple opportunities for cost savings which would keep the delivery charges at the current level. One area which should be re-visited is the compensation within this organization which drive the costs way up - this is unjustifiable. Monopolies need to be controlled with an iron fist to get them even close to private enterprises.
