

What changes after Grid-Connection?

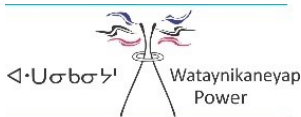

You may be wondering what happens to your electrical service when your community becomes grid-connected with the Wataynikaneyap Powerline:

Stays the same:

- Hydro One Remotes will continue to serve your local community.
- Bills will look the same: **Residential Customers will have the same rates & will continue to get the First Nations Delivery Credit.**
- **Same phone numbers:** Hydro One Remotes outage, customer service & billing (emergencies, questions, pay bills, new connections, etc.) will be the same phone number, email, and process.
- **Same ability to apply** for Ontario Electricity Support Program (OESP) and Low-income Energy Assistance Program (LEAP) billing relief programs.
- **All customer & community programs remain the same** (except for the REINDEER renewable energy program where no stand-alone projects will be permitted, but Net-Metering projects will be allowed such as solar panels on the water treatment plant).

Changes:

- **Ability to connect an unlimited number of buildings and houses!**
- Reduced Diesel Generating Station (DGS) usage means Lower Greenhouse Gas (GHG) emissions and less noise
- Lower Standard "A" Rates: (eg. Standard A General Service kWh: 114.89¢ will become 35.99¢).
- Reduced DGS Operator work.
- Your community's DGS Station may be used for Back-up power.
