			` '	' 1 1		,

- 3 consistent with its understanding of the Directions and Policies in the Ontario Energy Board's
- 4 ("OEB" or "Board") reports of November 28, 2007 "Application of Cost Allocation for Electricity
- 5 Distributors", and March 31, 2011 "Review of Electricity Distribution Cost Allocation Policy" (EB-
- 6 2010-0219) (the "Cost Allocation Reports") and all subsequent updates.
- 7 In this application, LPDL has used the most up to date 2025 OEB-approved Cost Allocation
- 8 Model released by the OEB on April 11, 2024, and followed the instructions and guidelines
- 9 issued by the OEB to enter 2025 data into this model. The 2025 demand values were
- determined based on the Load Profiles section of this Exhibit. The various weighting factors
- 11 used are also explained.
- 12 The main objectives of the original informational filings in 2006 were to provide information on
- any apparent cross-subsidization among a distributor's rate classifications and to support future
- rate applications. This information is updated to reflect new parameters and inputs and then
- used to adjust any cross-subsidization in the proposed rates.
- 16 The previous Board Approved revenue to cost ratios are presented as a point of reference to the
- proposed 2025 ratios. As part of its last Cost of Service Rate Application ("COS"), LPDL updated
- 18 the cost allocation revenue to cost ratios with 2019 base revenue requirement information. The
- revenue to cost ratios from the 2019 application are presented in Table 1.

20

1

21

Table 1 - Previously Approved Ratios (2019 COS)

Customer Class Name	2019 Approved Revenue to Cost Ratio
Residential	0.9695
General Service < 50 kW	0.9700
General Service 50 to 4999 kW	1.2000
Unmetered Scattered Load	1.2000
Sentinel Lighting	1.2000
Street Lighting	1.2000

2

- 3 The Cost Allocation Study for 2025 allocates the 2025 test year costs (i.e., the 2025 forecast
- 4 revenue requirement) to the various customer classes based on LPDL's inputs, described in this
- 5 Exhibit, entered into the OEB's Cost Allocation Model.

6

7

7.1.2 LOAD PROFILE (DEMAND DATA SHEET 18)

- 8 In preparing this Application, LPDL assessed available methodologies to prepare updated load
- 9 profiles for its rate classes based on more recent data and is of the view that the most
- 10 appropriate methodology is the Historical Average approach using weather-actual data outlined
- in section 2.7.1.1 of the Filing Requirements. For this method, a minimum of three years of
- 12 hourly data is required, with five years of hourly data being optimal. LPDL possesses three full
- 13 years of actual hourly interval data for all the applicable rate classes and is therefore able to
- 14 implement this methodology in this Application.
- 15 LPDL's load profile calculation utilized three years of actual hourly data by rate class for 2021-
- 16 2023 to determine the Coincident Peak (CP) and Non-Coincident Peak (NCP) contributions to
- 17 the system to prepare inputs into tab "18 Demand Data" of the OEB's Cost Allocation Model. Per
- 18 section 2.7.1.1 of the Filing Requirements, 1, 4, and 12 CP and NCP values are determined for
- 19 each rate class, for each year from 2021 to 2023 based on actual hourly data. The resulting

- demand allocators are subsequently averaged across the 3 years to calculate the final inputs to
- 2 the Cost Allocation Model.
- 3 The Sentinel Lighting and Unmetered Scattered Load ("USL") rate classes provide some
- 4 exception to the approach of relying on rate class specific actual data for the purpose of
- 5 determining demand allocators. For the Sentinel rate class, LPDL determined the hourly load
- 6 profile of its Street Lighting rate class for each year from 2021 to 2023 and applied this hourly
- 7 profile to the annual consumption of the Sentinel rate class for the purpose of determining CP
- 8 and NCP values. LPDL submits this is reasonable on the basis that Street Lights and Sentinel
- 9 Lights represent consumption patterns which are highly similar on an hourly basis. With respect
- 10 to USL, lacking meter data for these connections LPDL relied on the hourly load profile
- approved in its 2019 COS, and applied this hourly profile to the actual annual consumption for
- 12 USL in each of 2021, 2022 and 2023. In both cases, the demand allocators included in the Cost
- Allocation Model are the result of averaging the CP and NCP values of 2021, 2022 and 2023.
- 14 Table 2 through to Table 5 show the calculation of 2021 to 2023 CP and NCP values, as well as
- 15 the averaging of these 3 years to determine CP and NCP demand allocators for use in the Cost
- 16 Allocation Model.

- 1 7.1.3 INPUTS TO THE COST ALLOCATION MODEL (SHEETS 13, 14, 15.1, 15.2, 16.1, 16.2,
- 2 | 17.1, 17.2, 19)

3 Sheet I3, Trial Balance Data

- 4 LPDL populated the model with the 2025 forecasted data, return on deemed equity, PILs,
- 5 deemed interest on long term debt, and the targeted revenue requirement and rate base.

6 Sheet I4, Break-out of Assets

7 LPDL updated the allocation of the accounts based on 2025 values.

8 Sheet I5.1, Miscellaneous Data

- 9 LPDL updated the deemed equity component of rate base, kilometer of roads in the service area
- 10 that have a distribution line, the working capital allowance rate and the proportion of pole rental
- 11 revenue from secondary poles.

12 Sheet I5.2, Weighting Factors

- 13 LPDL has used LDC specific factors, as instructed by the Board, rather than continue to use OEB
- 14 approved default factors. LPDL has applied service and billing & collecting weightings for each
- 15 customer classification.
- 16 These weightings are based on a review of time and costs incurred in servicing its customer
- 17 classes for each respective activity, illustrated in Table 7 and described below.

Table 7 - I5.2 Weighting Factors

	1	2	3	7	8	9
	Residential	GS <50	GS>50-Regular	Street Light	Sentinel	Unmetered Scattered Load
Insert Weighting Factor for Services Account 1855	1.0	1.6	2.2	0.0	0.0	0.0
Insert Weighting Factor for Billing and Collecting	1.0	1.0	0.9	0.9	0.8	0.8

20

19

Proposed Services Weighting Factors

1

2	Residential: The Services weighting factor is set to a value of 1, per the Cost Allocation
3	Model instruction sheet.
4	General Service < 50 kW: The proposed Services weighting factor of 1.6 reflects that these
5	customers require greater capacity than residential customers as well increased levels of
6	planning and engineering, and a larger size of conductor, which are more costly and require
7	more material.
8	General Service > 50 kW (GS 50-4999 kW): The proposed Services weighting factor of 2.2
9	reflects that these customers require greater capacity than residential customers as well
10	increased levels of planning, engineering as well as a larger size of conductor, which is more
11	costly and requires more material.
12	Street Lighting, Sentinel Lighting and Unmetered Scattered Load: A Services weighting
13	factor of 0.0 is proposed for all three customer classes as the utility does not service these
14	classes.
15	Proposed Billing and Collecting Weighting Factors
16	Residential: The Billing and Collecting weighting factor is set to a value of 1, per the Cost
17	Allocation Model instruction sheet.
18	General Service < 50 kW: The proposed Billing and Collecting weighting factor is also set to
19	a value of 1. LPDL does not experience a material difference between time or cost required
20	to bill this class when compared to the residential class.
21	General Service > 50 kW (GS 50-4999 kW) and Street Lighting: The proposed Billing and
22	Collecting weighting factor for both classes is 0.9. All customers within this classification
23	have interval meters that are read and verified by a third-party vendor with a retail meter

account. The retail settlement provider costs attributed to these customer classes are less

- 1 than the overall smart meter network costs required for residential and GS < 50 kW
- 2 customers.
- 3 Sentinel Lighting and Unmetered Scattered Load: The proposed Billing and Collecting
- 4 weighting factor for both classes is 0.8. These classes do not give rise to collection costs as
- 5 the above customer classes do.

6 **Sheet I6.1 Revenue**

- 7 LPDL has populated the model with the 2025 Test Year forecast data as well as existing rates as
- 8 illustrated in Table 8.

9 Table 8 - I6.1 Revenue

1 Sheet I7.2 Meter Reading

4

5

8

9

- 2 LPDL has updated the meter reading weighting factors based on recent reading costs by
- 3 customer meter read types as shown in Table 11.

Table 11 - I7.2 Meter Reading

Meter Read Type	Weighting Factors for Meter Reading
Smart Meter	1.00
Interval	0.40

6 Sheet I9 Direct Allocation

7 LPDL has not entered any Direct Allocations.

7.1.4 CUSTOMER CLASSES

10 **Embedded Distributor Class**

11 LPDL confirms it is not a host to any distributor.

12 Street Lighting and Unmetered Scattered Load

- 13 LPDL communicates with Street Light and Unmetered Scattered Load customers to assist them
- in understanding the regulatory requirements in which LPDL operates. Since LPDL's largest
- 15 customers in this category are its municipal shareholders, LPDL communicates with them
- 16 frequently about load and potential rate impacts. LPDL will also communicate the rate increase
- 17 forecasted for this rate application and the impacts on its customers.

18 **MicroFIT**

- 19 LPDL is proposing to keep its MicroFit costs at \$10.00 per month to cover the cost of the
- settlement process as established in LPDL's COS, EB-2018-0050.

1 Standby Rates

2 LPDL does not have and is not seeking approval of standby charges.

New or Eliminated Customer Classes

4 LPDL is not proposing to include any new, or eliminate any existing, customer classes.

5

7.2 CLASS REVENUE REQUIREMENTS

7.2.1 SUMMARY OF DATA AND OUTPUTS

- 3 The revenue to cost ratios calculated in Sheet O1 and O2 of the Cost Allocation Model, updated
- 4 for the 2025 Test Year, are provided in Table 12 and Table 13 below.

5

7.2.2 CLASS REVENUE ANALYSIS

- 2 Table 14 shows the results of the Cost Allocation study updated for 2025. These results are used
- 3 as the starting point to consider LPDL's revenue to cost ratios for 2025 and assess whether
- 4 modifications to revenue to cost ratios are required to remain within the OEB's prescribed
- 5 revenue to cost ranges.

Street Lighting	1.54	1.20	(0.34)
Unmetered Scattered Load	1.10	1.10	-

2

- 3 The proposed Revenue to Cost ratio is adjusted by changing the allocation percentage for each
- 4 class. LPDL reviews and assesses the bill impacts for each class before adjusting the Revenue to
- 5 Cost ratios to determine whether rate mitigation is warranted for affected classes.
- 6 Only the Street Lighting customer class fell outside of the board range at 1.54. Consequently,
- 7 the Street Lighting class was adjusted to reduce its ratio to the top of the OEB's prescribed
- 8 range at 1.20. In order to reduce the Street Lighting revenue to cost ratio downwards, additional
- 9 revenues need to be allocated to another rate class. Consistent with commonly accepted
- 10 practice amongst distributors regulated by the OEB, LPDL first allocated these additional
- amounts to the rate class with the lowest revenue to cost ratio, which in this case was the GS>50
- 12 kW rate class with a ratio of 0.90. The entire revenue shortfall resulting from adjustment of the
- 13 Street Lighting rate class was absorbed by the GS>50 kW rate class without raising the revenue
- 14 to cost ratio for this rate class up to the ratio of the next lowest rate class. As such, only the
- 15 GS>50 kW revenue to cost ratio was adjusted upwards to facilitate reduction of the Street
- 16 Lighting ratio. The resulting GS>50 kW revenue to cost ratio proposed is 0.92.
