I am trying to conserve energy to keep my electricity bill low. I am already paying much more for delivery and other charges than for my actual energy usage!

Now I hear that because of INCREASED usage (electric bikes, cars, heat pumps, etc) I will have to pay even more in other charges.

I do NOT agree to such a large increase!

How about reminding people to use LESS energy not more.

And those who choose not to conserve energy, they should be the ones paying more!
