

LETTER OF COMMENT

Comments:

I am one of many that is going to be impacted by the extremely high increase to the hydro rates. As I understand the money used in these increases is for re-structuring our grids, however I do not see how this would be applicable for us personally. I find we have more than enough electricity, however an excess of hydro is being sent to the U.S from Ontario and I can not understand why the higher tariffs can not cover the cost of the re-structuring that is required primarily to power them and not us. I find that this is going to have a huge impact on low-mid income households and unwarranted as the government is trying to go green at this time.

Name: John Loscher

Do you reside in the impacted service area?: Yes
